PROFESSIONAL SUMMARY

Versatile and certified DevOps expert with 12+ years of experience spanning **Azure**, **AWS**, **GCP** and **Linux** environments, progressing through critical roles such as **Azure DevOps Architect**, **Senior DevOps Engineer**, and **Infrastructure Engineer**. Skilled in architecting and automating cloud infrastructure, implementing CI/CD pipelines, and driving DevOps best practices across hybrid and cloud-native environments. Strong command of **Terraform**, **PowerShell**, and various scripting tools to deliver scalable, secure, and cost-effective solutions.

Extensive hands-on experience managing enterprise-grade workloads, improving operational efficiency, and ensuring high availability and compliance in industries including **financial services and payment systems**. Collaborative leader with a proven ability to align technical execution with business goals, while fostering automation, agility, and innovation across cross-functional teams.

- **Cloud Platforms**: Expertise in **Microsoft Azure** and **Amazon Web Services (AWS)** cloud environments with a strong focus on automation, scalability, and security.
- **DevOps Tooling**: Hands-on experience with CI/CD tools including **Azure DevOps**, **GitHub Actions**, and **Jenkins** for seamless code deployment and infrastructure delivery.
- **Infrastructure as Code (IaC)**: Proficient in using **Terraform** and **YAML** for infrastructure provisioning, configuration, and environment standardization.
- **Scripting & Automation**: Advanced scripting skills in **PowerShell**, **Bash**, and **Python** to automate cloud resource management and operational tasks.
- **Disaster Recovery & Backup**: Designed and implemented robust DR strategies using **Azure Site Recovery** and **Azure Backup**, including automated failover testing.
- **Linux Administration**: Strong foundation in **Linux system administration**, including configuration, patching, monitoring, and performance tuning.
- **Containerization & Orchestration**: Experience deploying containerized applications with **Docker** and managing Kubernetes clusters, especially in **Azure Kubernetes Service (AKS)**.

- **Cloud Governance & Compliance**: Implemented cost control, tagging, and compliance strategies aligned with **SOC 2**, **HIPAA**, and **GDPR**.
- **Networking & Security**: In-depth understanding of cloud networking (e.g., VNETs, NSGs, VPNs, IAM), securing access, and maintaining operational integrity.
- **Domain Knowledge**: Experience working in **payment systems environments**, including merchant, processor, and banking platforms.
- **Team Collaboration & Leadership**: Proven ability to work closely with developers, security teams, and IT stakeholders to align infrastructure with business priorities.

TECHNICAL SKILLS

Cloud Technologies	**Azure, AWS, GCP**
Operating Systems	**Ubuntu, CentOS, Red Hat, Linux, Windows**
Configuration and Infrastructure Management Tools	**Terraform, Ansible, Chef, Puppet, Maven, ANT**
Automation and Ticketing Tools	**GitLab, GitHub, Jenkins, Bamboo, Jira**
Containerization	**Docker, Docker Swarm, Kubernetes**
Scripting Languages	**Python, Ruby, JSON, YAML, Shell, GO**
Web Servers	**Web Logic, JBoss, Apache Tomcat, Websphere**
Monitoring Tools	**Splunk, Nagios, Cloud Watch, ELK, App Dynamics**
Databases	**MySQL, SQL Server, MongoDB, DynamoDB**
Repository Management	**J frog, Nexus, Artifactory**
Network Protocols	**TCP/IP, DHCP, DNS, SNMP, SMTP, Ethernet, NFS**

PROFESSIONAL EXPERIENCE

Client: Oil and Gas, Huston, Tx. Dec 2022 – Present
Role: Azure DevOps Architect (Migration from On prem to Azure Cloud)

Responsibilities:

Cloud & DevOps (Azure, ADO, ADF, Azure AD-EntraID, Snowflake, Kubernetes, Docker, CI/CD, Terraform):

- Designed and implemented Azure cloud architectures, ensuring security, scalability, and high availability.
- Built and maintained **CI/CD** pipelines in **Azure DevOps** (ADO) for automated deployments and testing.

- Managed **Kubernetes** (AKS) clusters and deployed containerized applications using **Docker**.
- Automated infrastructure provisioning with **Terraform**, ensuring compliance and consistency.
- Integrated **CyberArk Conjur** for secrets management in DevOps workflows and containerized applications.
- Azure log **Monitoring** for configuring and managing log data collection.
- Monitor application performance and diagnostics in application insights. And look for exceptions for web applications.
- Alerting and automation by setting up alerts and integrating with **Azure logic apps**, power automate, Azure functions.
- Strong expertise in **Snowflake Data Cloud**, including data warehousing, performance tuning, and query optimization.
- Experience in **Snowflake schema design**, data modeling, and best practices for high-performance analytics.
- Proficient in **Snowflake SQL**, stored procedures, and Snowflake Python Connector for **ETL/ELT** data pipelines.
- Added **IP addresses** in **Network** in **Azure** for applications in all three environments for multiple locations.

Security & Compliance (OneTrust, GRC, Risk Assessment, Enterprise Architecture, MS Visio, CyberArk, Conjur, ServiceNow, PowerBI, Citrix workspace):

- Implemented **CyberArk** Privileged Access Management (PAM) and Conjur for secure credential management.
- Created usernames and **passwords** for web apps and stored in conjur for Azure web apps.
- Stored client secrets in **Conjur** and sync with Azure so that **client secret** certificate is rotated itself and doesn't expire. Also sync itself if a new secret is created in azure.
- Conducted **risk assessments** and security reviews for cloud workloads, DevOps processes, and .NET and Mendix web applications.
- Created .NET web apps architectures and Mendix web apps architectures for **Enterprise Architecture** approvals, Security approvals and **GRC** approvals.
- Managed GRC (**Governance, Risk, and Compliance**) approvals for security exceptions and policy adherence.
- Automated security and risk workflows using **ServiceNow** GRC module, ensuring efficient tracking and compliance reporting.
- Applied security best practices in Azure IAM, RBAC, network security groups (NSGs), and firewall policies.
- Updated CI relationships, Descriptions, Owners in ServiceNow for Business applications and Web applications.
- Raised **CMDB** requests to update the web apps url’s in ServiceNow

Architecture & Database Management (Architectures, Sharepoint, SQL, Teradata Studio, Terraform, Visual Studio, Kubernetes, Docker):

- Designed and optimized secure cloud and **on-prem architectures**, aligning with enterprise security policies.
- Developed and optimized **SQL queries**, stored procedures, and database performance tuning.
- Managed containerized database services with **Docker and Kubernetes**, ensuring high availability.

- Managed and optimized **Teradata** databases using Teradata Studio for data analysis and reporting. Further **monitoring logs** in azure portal for errors and **exceptions**.
- Automated infrastructure and database provisioning using Terraform, improving deployment efficiency.
- Documented the .NET web apps and Mendix web apps along with creating their **architectures** in folders in Sharepoint to make easy access for maintenance team after team is rolled-off the project.
- Integration of **Snowflake** with **Azure Data Factory, Databricks,** and **Power BI** for data transformation and reporting.

Along with:

- **GenAI Integration in Operations:** Utilized **Generative AI** to optimize predictive maintenance by analyzing sensor and operational data, improving asset management and reducing downtime.
- Integrated AI-driven insights into **Exploration and Production (E&P)** processes, optimizing reservoir management, and identifying drilling opportunities.
- **Process Optimization & Workflow Automation:** Leveraged GenAI to streamline **supply chain optimization**, reducing operational costs through predictive demand forecasting and logistics automation.
- Implemented AI models for real-time monitoring of safety parameters and risk management, ensuring **compliance** and worker safety.
- **Data-Driven Decision-Making:** Developed **data analysis pipelines** to process historical and real-time data for predictive modeling, improving decision-making and operational efficiency.
- Enhanced decision-making through AI-driven insights for **energy trading**, forecasting market trends, and developing trading strategies.
- **Compliance & Reporting Automation:** Automated regulatory reporting and compliance documentation generation using **GenAI**, ensuring accurate and timely submission in line with industry standards.
- **Collaboration & Continuous Improvement:** Collaborated with cross-functional teams to integrate AI tools into **DevOps workflows**, driving continuous improvement and operational agility.
- **AI & Application Modernization:** Design, develop, and deploy AI-powered software solutions using Azure AI Services to enhance customer experiences.
- Integrate Azure AI capabilities (Search, Vision, Speech, and Document Intelligence) into enterprise applications.
- Implement large language models (LLMs) and vector databases for AI-driven functionalities.
- Optimize cost and resource allocation of AI models in Azure.
- Ensure AI systems comply with security, data governance, and ethical AI guidelines.

Client: Sirius, San Antonio, TX **Dec 2020 – Dec 2022**
Role: Sr Azure DevOps Engineer (Hosted Apps on Azure and GCP Cloud)
Responsibilities:

- Designed and enhanced scalable, reliable, and high-performance **automated build and test infrastructure**, improving development velocity and reducing time to deployment.
- Streamlined software delivery lifecycle (SDLC) by optimizing integration and deployment pipelines for **Development** and **Software QA teams**, incorporating AI-based recommendations and validation checks.

- Led continuous refinement of deployment workflows to reduce downtime and deployment risk across **microservices-based enterprise applications** hosted on **Azure** and **GCP**.
- Administered and optimized cloud environments across **Microsoft Azure** and **Google Cloud Platform (GCP)**, including infrastructure provisioning, performance tuning, and workload automation.
- Implemented **Infrastructure as Code (IaC)** using **Bicep** and **Terraform**, with Bicep as the preferred tool for declarative resource management and pipeline integration.
- Managed application hosting and orchestration using **Docker**, **Kubernetes**, and **Helm**, ensuring seamless deployments, auto-scaling, and high availability of containerized services.
- Developed end-to-end automation solutions using tools such as **Ansible**, **Puppet**, and **Chef**, enhancing repeatability and consistency across staging and production environments.
- Integrated observability tools including **Grafana**, **Prometheus**, and **Elasticsearch** for real-time performance monitoring, health checks, and anomaly detection across critical services.
- Implemented continuous delivery and blue-green deployments using **Jenkins**, **Terraform**, and container-based environments, aligned with enterprise DevSecOps standards.
- Provided deep expertise in **Linux administration**, **shell scripting**, and deployment automation, supporting internal tooling and large-scale cloud-native platforms.
- Supported virtualization environments via **VMware**, **KVM**, and **libvirt**, optimizing VM provisioning and workload placement strategies for dev/test infrastructure.
- Integrated **RabbitMQ** messaging queues to support resilient and scalable microservices communication patterns.
- Collaborated with developers, QA engineers, and release managers to ensure efficient integration of new features into CI/CD pipelines and production environments.
- Maintained clear and comprehensive documentation for deployment workflows, configuration standards, rollback procedures, and automation runbooks.
- Actively researched emerging trends in **DevOps**, **Cloud-Native tooling**, **automation**, applying best practices to improve platform performance and resilience.
- Contributed to cloud-to-cloud migration projects, optimizing compute and storage efficiency during transitions between Azure and GCP.
- Familiarity with **Microsoft Digital Twins**, enabling simulation-driven infrastructure testing and digital modeling for advanced use cases.
- Experience with **Node.js** in DevOps contexts, supporting back-end microservices and scripting solutions for automation tasks.

Client: Crowe, Austin, TX **Jan 2020 – Nov 2020**
Role: Azure DevOps Engineer
Responsibilities:
- Designed and implemented resilient DR strategies using **Azure Site Recovery (ASR)** and **Azure Backup**, aligning with RTO and RPO targets.

- Performed automated **failover testing** and recovery drills to ensure readiness for high-availability scenarios.
- Developed and maintained **Terraform modules** for provisioning and managing scalable Azure infrastructure.
- Automated infrastructure deployments using **PowerShell**, **YAML**, and CI/CD pipelines in **Azure DevOps**, **GitHub Actions**, and **Jenkins**.
- Ensured secure state management and consistent deployments across development, staging, and production environments.
- Engineered end-to-end automation scripts in **PowerShell**, **Bash**, and **Python** to manage Azure resources and streamline operational tasks.
- Integrated automation into CI/CD processes to support infrastructure scaling, monitoring, and configuration management
- Provisioned and managed Azure services, including **VMs**, **VNETs**, **Load Balancers**, **Storage Accounts**, and **IAM** roles.
- Architected secure hybrid cloud networks with **VPN Gateways**, **NSGs**, and **ExpressRoute**.
- Deployed monitoring solutions using **Azure Monitor**, **Log Analytics**, and **Application Insights**.
- Implemented containerized applications using **Docker** and deployed to **Azure Kubernetes Service (AKS)** environments.
- Integrated Kubernetes with CI/CD pipelines for seamless application delivery.
- Applied tagging strategies and cost management techniques to optimize cloud spend and track resource utilization.
- Ensured infrastructure compliance with standards such as **SOC 2**, **HIPAA**, and **GDPR**.
- Partnered with cross-functional teams including developers, IT operations, and security to align infrastructure goals.
- Authored technical documentation for DR procedures, Terraform modules, and CI/CD workflows for team adoption.
- Brought domain-specific insight to cloud infrastructure design in **payment systems**, including merchant, provider/processor, and financial institution contexts.

Client: Credit Karma, San Francisco, CA. **May 2017 – Dec 2019**
Role: Sr AWS DevOps Engineer
Responsibilities:

- **Architected and managed scalable cloud infrastructure on AWS**, leveraging core services such as EC2, S3, RDS, Lambda, IAM, and VPC to support highly available, fault-tolerant applications.
- **Implemented Infrastructure as Code (IaC)** using **Terraform** and **AWS CloudFormation**, enabling repeatable, consistent environment provisioning and improving deployment efficiency.
- **Built and maintained CI/CD pipelines** using **Jenkins**, **GitLab CI**, and **CircleCI**, automating application builds, tests, and deployments to reduce cycle time and increase release velocity.

- **Developed serverless applications** utilizing **AWS Lambda** functions written in **Python**, **JavaScript (Node.js)**, and **Go**, integrating with services such as API Gateway and DynamoDB for modern, cost-effective backend solutions.
- **Applied GitOps principles** by designing and enforcing Git-centric workflows (feature branching, pull requests, protected branches) and maintaining clean, audit-friendly version control using **GitHub** or **GitLab**.
- **Integrated code quality and security tools** into development pipelines, including static analysis (e.g., SonarQube), linters (e.g., ESLint, Pylint), and open-source vulnerability scanning tools.
- **Led containerization efforts** using **Docker**, and contributed to **Kubernetes** or **AWS ECS/EKS** cluster configuration, improving microservices deployment and scaling capabilities.
- **Collaborated across cross-functional teams**, presenting technical concepts to both technical and non-technical stakeholders, and translating business requirements into scalable technical solutions.
- **Mentored junior engineers**, conducting code reviews, sharing DevOps best practices, and promoting a culture of continuous improvement.
- **Demonstrated strong project management and time prioritization skills** in fast-paced, agile environments, effectively handling multiple priorities and stakeholder demands.
- **Represented engineering in customer-facing engagements**, including architecture consultations, technical presentations, and troubleshooting sessions, ensuring alignment between business and technical goals.

Client: Verizon, Cary, NC **Mar 2014 – April 2017**
Role: AWS DevOps Infrastructure Engineer
Responsibilities:

- **Designed and built scalable, high-performance backend systems** to support core Customer Data Platform (CDP) capabilities, ensuring long-term reliability and maintainability in a distributed cloud environment (AWS).
- **Refactored legacy services and addressed technical debt** by applying modern engineering best practices, improving system performance, and increasing overall code quality.
- **Maintained platform stability and operational excellence** through proactive monitoring, root cause analysis, and active participation in the platform's on-call rotation.
- **Collaborated with cross-functional teams** including Product, Frontend, and DevOps, to align backend infrastructure with user needs and product goals, fostering a strong culture of partnership and knowledge sharing.
- **Mentored junior engineers and peers**, promoting technical growth and best practices through code reviews, architectural discussions, and internal documentation.
- **Drove key strategic initiatives** such as Core CDP Infrastructure Consolidation, contributing to long-term architectural planning and platform unification.
- **Enhanced CI/CD processes and pipeline reliability** by implementing and optimizing workflows using Jenkins and Infrastructure as Code tools such as Terraform and Ansible.

- **Implemented robust observability solutions** using tools like Datadog, Prometheus, and New Relic to ensure visibility into system health and improve incident response.
- **Applied networking and infrastructure expertise** (e.g., TCP/IP, Load Balancing, DNS, OSI Model) to architect resilient backend services across distributed systems.
- **Promoted a security-first development approach**, integrating tools like Snyk and SonarQube for continuous vulnerability scanning and code quality assurance.

Client Axis Bank, Punjab, India **Jan 2013 – Mar 2014**
Role: LINUX SYSTEM ADMINISTRATOR
Responsibilities:

- **Server Administration & Maintenance:** Install, configure, and maintain Linux distributions such as RHEL, CentOS, Ubuntu, Debian, and SUSE.
- Perform kernel upgrades and patches to enhance system performance and security.
- Monitor system health, performance, and resource utilization using tools like Nagios, Zabbix, and Munin.
- **User & Access Management:** Manage user accounts, groups, and permissions using LDAP, NIS, and local authentication.
- Implement Role-Based Access Control (RBAC) and manage SSH access.
- **Filesystem & Storage Management:** Configure and manage LVM (Logical Volume Manager), RAID, and disk partitions.
- Implement file system quotas and permissions to ensure security and fair resource allocation.
- Perform regular data backups and disaster recovery planning using rsync, tar, and Bacula.
- **Networking & Security:** Configure and manage firewalls using ip tables and firewall.
- Troubleshoot and optimize network performance using Wireshark, tcpdump, and netstat.
- Implement secure remote access via OpenSSH, OpenVPN, and IPSec.
- **Automation & Scripting:** Automate repetitive system administration tasks using Bash, Perl, and Python scripts.
- Manage system configurations and automation with Puppet and Chef.
- **Server & Application Management:** Deploy and maintain Apache, Nginx, and Tomcat web servers.
- Optimize database performance and perform basic DBA tasks for MySQL and PostgreSQL.
