PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience in the Supply Chain domain, specializing in decision-making, process optimization, and predictive analytics. Proficient with SQL, Python, and advanced Excel to extract, analyze, and visualize large datasets, improving operational efficiency and reducing costs. Experienced in utilizing BI tools like Tableau and Power BI to develop insightful dashboards. Understanding of supply chain management, inventory optimization, demand forecasting, and logistics analytics.

SKILLS & TOOLS

- **Data Analysis & Visualization:** SQL, Python (Pandas, NumPy, Matplotlib, Seaborn), Power BI, Tableau, Excel (Power Query, Pivot Tables, VBA)
- **Database Management:** SQL Server, MySQL, PostgreSQL, MongoDB
- **Supply Chain Analytics:** Demand Forecasting, Inventory Management, Logistics Optimization, Supplier Performance Analysis
- **ETL & Data Engineering:** Apache Airflow, Alteryx, Talend, AWS Redshift, Snowflake
- **Statistical Analysis & Predictive Modeling:** Regression Analysis, Time Series Forecasting, Machine Learning (Scikit-Learn)
- **Cloud & Big Data:** AWS (S3, Redshift, Glue), Google BigQuery, Hadoop, Microsoft Azure
- **Project Management & Reporting:** Agile, Jira, Confluence, SAP ERP, Oracle SCM, SDLC

PROFESSIONAL EXPERIENCE

Data Analyst, *Caterpillar Inc* — Aug 2024 – Present | USA

- Analyzed and optimized supply chain processes, reducing transportation costs by 15% through advanced data modeling and predictive analytics.
- Developed Power BI dashboards to track key KPIs such as order fulfillment, inventory turnover, and supplier lead times, improving decision-making efficiency by 25%.
- Implemented SQL-based ETL pipelines to clean and transform supply chain data from disparate sources, enhancing data integrity and reporting accuracy.
- Enhanced forecasting accuracy by 20% and minimized stockouts through Python's time series models, while also automating Excel-based reports with VBA and Power Query, leading to a 30% reduction in manual reporting time.
- Partnered with cross-functional teams to identify inefficiencies in procurement and logistics, leading to a 10% improvement in supply chain responsiveness.

Graduate Assistant, *University of Illinois at Chicago* — Jan 2024 – May 2024 | USA

- Conducted in-depth supply chain data analysis using advanced modeling techniques, optimizing workflows and eliminating bottlenecks, leading to a 12% increase in production throughput.
- Performed detailed inventory analysis to develop data-driven procurement strategies, optimizing stock levels and reducing excess inventory by 12%, significantly improving overall inventory management efficiency.
- Collaborated with cross-functional teams to support machine design simulations, applying data analysis to refine prototype accuracy and performance, ultimately contributing to enhanced product development cycles.
- Developed automated data dashboards to streamline KPI tracking for supply chain and inventory, delivering real-time insights for data-driven decision-making.

Supply Chain Analyst, *Life Essentials by Lifelyfts* — Jan 2023 – Dec 2023 | USA

- Orchestrated a project to optimize inventory management for mechanical components, using advanced data analysis to reduce excess stock by 12%, improving operational efficiency and lowering holding costs.
- Developed SQL queries and Tableau dashboards to visualize supply chain metrics, improving decision-making and operational visibility for inventory levels, supplier lead times, and order fulfillment.
- Conducted root cause analysis of shipment delays, reducing 10% lead times through process improvements and supplier.
- Led ETL processes for large datasets from SAP ERP and SQL databases using Python and SQL, implementing predictive analytics to forecast demand and optimize stock levels, achieving a 15% reduction in stockouts.
- Delivered reports and presentations to senior management, translating data into actionable insights that optimized inventory, reduced risks, and improved supplier performance.
- Utilized predictive modeling and regression analysis to optimize inventory replenishment, reducing stockouts by 15% and improving production schedules and resource allocation.

EDUCATION

University of Illinois at Chicago (UIC)

- **Master of Science in Business Analytics** *(GPA: 4.0)* — Expected May 2025
- **Bachelor of Science in Mechanical Engineering** — Aug 2019 to May 2023

PROJECTS

Supply Chain Optimization for a Manufacturing Firm

- Developed a demand forecasting model using Python, Pandas, and SciPy, improving inventory planning accuracy by 18%.
- Implemented ABC analysis and EOQ modeling, reducing carrying costs by 25%.
- Designed a real-time supply chain dashboard using Power BI & SQL, allowing stakeholders to monitor key performance indicators (KPIs) and minimize lead times.

IoT-Based Smart Inventory Management System

- Integrated IoT sensors with ERP system to automate inventory tracking and stock replenishment, reducing 30% stockouts.
- Built SQL-based database architecture to store real-time inventory data, improving traceability and demand forecasting.
