SUMANTH REDDY BONTHA

Orlando, FL || +1 (407)-388-4436 || sumanthredddy.bontha@gmail.com || LinkedIn || Github

EDUCATION

University of Central Florida **Master** of Science in Computer Science *GPA : **3.91*** *May 2025*

Relevant Coursework: Design and Analysis of Algorithms, Data Mining, Machine Learning, Computer Vision.

Osmania University **Bachelor** of Engineering in Computer Science *GPA : **3.41*** *May 2022*

Relevant Coursework: DBMS, Operating Systems, Machine Learning, NLP, ,Operating Systems, Cloud Computing

TECHNICAL SKILLS

Frontend Technologies **:** HTML5, CSS3, JavaScript, React JS, RESTful APIs
Programming Languages **:** Python, Java, C++, Node.js , C
Database Systems **:** PostgreSQL, MySQL, Snowflake, distributed storage, indexing, query optimization
Tools & Frameworks **:** Docker, Kubernetes, Redis, Spring Boot, Zato, PyTest, Microservices, Agile Practices
Version Control **:** Git, Jenkins, GitLab, CI/CD
Cloud Technologies **:** AWS (EC2, S3, Lambda, RDS, CloudWatch), Azure, cloud computing, scalable services

CERTIFICATIONS

Programming and Data Structures using Python – **NPTEL** Algorithmic Toolbox – **Coursera**

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER *Energy Tech Global, Hyderabad, India* *May 2022 – July 2023*

- Implemented automation for key functions using Python including onboarding, billing, payments, and moveouts, eliminating 80% of manual processes and reducing task cycles by 30%.
- Directed AWS CloudWatch log monitoring and real-time reporting, improving issue detection and resolution by 40% and ensuring increased system uptime.
- Led cross-functional teams across three countries to design and deploy scalable backend solutions for energy retail workflows, customer communication, and payment systems delivering 15+ critical enhancements ahead of schedule, improving response times and increasing customer satisfaction by 25%.
- Streamlined data retrieval by optimizing PostgreSQL queries and integrated microservices, boosting database efficiency by 25% and reducing overall system load by 15%.
- Enhanced system performance by upgrading to Redis for memory storage, increasing data retrieval speed by 35% and improving response times for high-traffic queries.
- Engineered automated post-deployment module upgrades using Docker, cutting deployment time and boosting development productivity by 20%.
- Mentored junior developers in code reviews and Agile best practices, accelerating onboarding timelines by 30% for 3 new team members.

SOFTWARE ENGINEER INTERN *Energy Tech Global, Hyderabad, India* *Feb 2022 – May 2022*

- Automated backend workflows using Python, processing 10,000+ daily data transactions and reducing manual intervention by 40%.
- Enhanced database performance by refactoring SQL queries and indexing strategies, reducing API latency by 25% and improving scalability for high-traffic systems.
- Achieved 95% code coverage by implementing integration tests using PyTest reducing post-deployment defects by 30% and ensuring compliance.
- Promoted to full-time Software Engineer within 5 months for exceeding performance benchmarks and driving key automation initiatives.

PROJECTS

API-Driven Inventory Management System. *Tech Stack: Java, Azure, Spring Boot, React JS, MySQL*

- Orchestrated the integration of RESTful APIs using Java and Spring Boot, improving inventory management efficiency by 40%.
- Designed and implemented MySQL database schemas, optimizing data storage and retrieval speed by 30%.
- Built a user-friendly frontend with ReactJS, enhancing user experience and reducing navigation time by 20%.
- Deployed the solution on Azure Cloud, ensuring 99% uptime, and high performance for 1,000+ concurrent users.
- Utilized Git for version control and conducted API testing, reducing post-deployment bugs by 15%.

ML-Driven Stock Recommendations. *Tech Stack: Python, Machine Learning, Data Mining*

- Built an end-to-end data pipeline processing over 2 million financial records, conducting exploratory data analysis (EDA) to identify high-potential investments, resulting in a 30% improvement in portfolio performance.
- Applied clustering techniques (K-Means, K-Medoids, Fuzzy C-Means) to segment 500+ companies based on financial metrics, boosting recommendation relevance by 25%.
- Optimized classification models (Random Forest, Decision Trees, XGBoost) to achieve 80%+ stock prediction accuracy, outperforming baseline models by 15%.
- Leveraged dimensionality reduction (PCA, t-SNE) to visualize and uncover trends increasing precision by 10%.
