

PRASAD PANDARE

PROFESSIONAL SUMMARY

Results-driven Senior Software Developer/ Architect with 15+ years of experience in designing and developing robust, scalable applications using Java, Kotlin, and modern frameworks like Spring Boot, Angular, and React. Proven expertise in microservices architecture, cloud technologies (AWS, GCP), and backend distributed systems. Demonstrated success in finance, hospitality, and telecommunications domains, delivering high-quality solutions with a focus on performance, reliability, and security. Strong skills in API integration, Kafka streaming, and full-stack development, coupled with Agile methodologies and DevOps practices. Experienced in building and deploying scalable, cloud-native applications using containerization technologies like Docker and Kubernetes. Proven success in automating infrastructure with Terraform, enhancing deployment efficiency and reducing errors. Passionate about leveraging Generative AI and assistive AI tools to drive innovation and improve application performance and user experience.

SKILLS

Java, Spring Boot, Spring Cloud, Microservices, Angular, React, Python, Golang, AWS, GCP, Kafka, Docker, Kubernetes, Kafka Streaming, Netflix Eureka, Oracle, PL/SQL, Sybase, DB2, SQL Server, Cassandra, REST APIs, DevOps, Scala, Kotlin, Shell Scripting, XML, HTML, Hibernate, JavaScript, Resilience4j, Tomcat, Jenkins,, Maven, Ant, UML, Junit, Sleuth, Zipkin, Kibana, Elastic Search, Logstash, Vue.js, Gen AI.

EMPLOYMENT HISTORY

SENIOR SOFTWARE DEVELOPER <i>Accenture</i>	May 2022 - Current <i>Remote/Texas</i>
◆ Developed dynamic and responsive UIs using React, Vue, and Angular, enhancing user experience and accessibility for enterprise applications. ◆ Enhanced the performance of distributed systems by identifying and resolving large-scale datastore bottlenecks, leveraging PostgreSQL and optimizing data structures. ◆ Integrated Datadog with AWS and EKS workloads for end-to-end monitoring and alerting; implemented custom metrics, logs, and dashboards for real-time health checks and anomaly detection. ◆ Built and optimized RESTful APIs with Node.js and TypeScript, improving response times by 40% and ensuring seamless integration with third-party services. ◆ Designed and implemented cloud-native applications on AWS using services Lambda, API Gateway, DynamoDB, and Step Functions, improving system scalability and reducing infrastructure cost by 40%. ◆ Implemented end-to-end monitoring pipelines for microservices using Open Telemetry and Grafana dashboards, enabling proactive issue detection and reducing mean time to resolution (MTTR) by 30%. ◆ Set up real-time monitoring dashboards using Prometheus, Grafana, and Splunk, enabling proactive alerting and reducing mean time to resolution (MTTR) by 60%. ◆ Engineered MongoDB and DynamoDB schemas with proper indexing, partition key strategy, and TTL policies to support high-performance, low-latency access patterns across multiple microservices. ◆ Built and deployed microservices on AWS EC2, utilizing S3 for static assets, and integrated AWS SDK for dynamic content uploads. ◆ Created migration scripts for database versioning and automated schema updates using tools like Flyway and Liquibase. ◆ Built distributed async processing pipelines using message queues and Go routines to support real-time updates of product availability across 200+ fulfillment centers. ◆ Provisioned AWS infrastructure using Terraform, including Lambda functions, DynamoDB tables, IAM roles, and API Gateway, enabling fully automated and reproducible environments across dev and prod stages.	

- ◆ Built secure APIs using OAuth 2.0, JWT, and SAML, ensuring compliance with enterprise security standards across financial services platforms.
- ◆ Spearheaded the integration of DevSecOps practices including automated vulnerability scanning (Trivy, Snyk) and compliance validation in CI/CD pipelines.
- ◆ Created infrastructure modules using Terraform and Helm to deploy backend services in a consistent, secure, and reproducible manner across staging and production environments.
- ◆ Utilized Redis for caching to reduce database load and improve application performance, achieving faster data retrieval and lower latency.
- ◆ Worked closely with cross-functional teams (Dev, SRE, Security) to architect observability pipelines for mission-critical AWS workloads including EKS and messaging systems (SQS).
- ◆ Demonstrated proficiency with GenAI/GitHub Copilot to accelerate code development and ensure adherence to industry best practices.
- ◆ Built centralized logging pipelines using AWS CloudWatch Logs, CloudWatch Alarms, and Log Insights, enabling proactive incident management and reducing MTTR by 40%.

SENIOR SOFTWARE DEVELOPER

Jan 2019 -Apr 2022

Mezocliq

New York

- ◆ Led the design and implementation of microservices architecture using Spring Boot, Kafka, and RESTful APIs to decouple legacy monoliths, reducing deployment downtime by 70% and improving scalability.
- ◆ Conducted code reviews and led optimization initiatives that reduced database query execution time by 50% through SQL tuning and efficient data modeling in PostgreSQL and Oracle.
- ◆ Performed troubleshooting and log analysis on WebLogic and WebSphere environments, resolving critical production issues under SLA constraints.
- ◆ Built event-driven architectures using Kafka, RabbitMQ, and SQS, enabling real-time processing of millions of events per day.
- ◆ Managed environment-specific configurations using Spring Profiles and deployed artifacts using Gradle and Maven in CI/CD environments.
- ◆ Developed and executed unit and integration tests using JUnit and Mockito, achieving 90%+ test coverage and ensuring production-grade code quality.
- ◆ Integrated caching strategies (Redis, Memcached) to optimize API performance, reducing latency by 40%.
- ◆ Automated daily operational tasks and custom deployment workflows using Shell scripts, improving engineer productivity and reducing manual errors.
- ◆ Optimized MongoDB schemas and query performance for high-traffic applications, reducing query execution time by 40% through effective indexing and aggregation strategies.
- ◆ Led peer code reviews and mentored junior engineers in Spring ecosystem, Git branching strategies (GitFlow), and cloud-first design principles.
- ◆ Created and maintained MuleSoft reusable assets (connectors, templates, and APIs) in an enterprise API repository, streamlining integration development across multiple business units.
- ◆ Wrote MUnit tests and implemented robust error handling strategies, increasing API reliability and reducing production incidents by 30%.
- ◆ Built end-to-end CI/CD pipelines in Azure DevOps, automating tests, packaging, Terraform deployments, and blue-green Lambda releases with rollback support, improving deployment frequency by 50%.
- ◆ Designed and implemented scalable microservices and RESTful APIs for high-traffic environments, leveraging Docker for containerization and efficient deployment.
- ◆ Wrote complex SQL queries and PL/SQL stored procedures in Oracle for high-volume data processing modules, optimizing critical reports and reducing query time by over 60%.
- ◆ Provisioned and managed infrastructure on GCP using Terraform, enabling reproducible and auditable deployments with zero-downtime rollouts.

- ◆ Developed and maintained mission-critical software applications in large-scale production environments, focusing on backend services using NodeJS, TypeScript.
- ◆ Designed and deployed enterprise-grade APIs using MuleSoft Anypoint Platform, including API Manager, Runtime Manager, and Design Center, facilitating secure integrations between core financial systems.
- ◆ Utilized Elasticsearch to build a highly efficient search engine for a large-scale platform, reducing search response times by 40% and improving user experience for daily active users.
- ◆ Built and shipped new user-facing features end-to-end, from API design and database schema changes in PostgreSQL to frontend integration via GraphQL, accelerating feature release cycles by 30%.
- ◆ Integrated external APIs and internal data pipelines using Spring Batch and Python, automating ingestion and transformation of large-scale consumer survey data for dashboard visualization.
- ◆ Built and deployed end-to-end Ruby on Rails applications with PostgreSQL, Redis, and Sidekiq, powering business-critical features for multiple active users.
- ◆ Implemented enterprise-grade APIs for customer onboarding and account management using Spring MVC and JAX-RS, deployed on JBoss and WebLogic servers in a high-availability cluster environment.
- ◆ Utilized Spring Data JPA to build data-access layers with efficient ORM queries, reducing boilerplate code and improving performance on large datasets.

SENIOR SOFTWARE DEVELOPER

Mar 2013 - Dec 2018

IBM

New Jersey

- ◆ Developed data visualization workflows using Power BI, enabling executive stakeholders to track demographic engagement trends in real time.
- ◆ Developed and maintained SOA-based web services using Java/JEE, Spring Boot, JAX-RS, and SOAP/JMS web services to ensure reliable and secure data exchange.
- ◆ Developed robust test suites using JUnit and TestNG, improving code quality and maintaining high test coverage.
- ◆ Built and maintained Java/JEE microservices with Spring Boot and JPA/Hibernate, ensuring efficient data handling and supporting distributed transaction management.
- ◆ Deployed, configured, and tuned Java applications on Tomcat, WebSphere, and JBoss servers, improving deployment success rate and reducing downtime by 40% through automated CI/CD pipelines.
- ◆ Improved database query performance using SQL tuning, indexing, and JDBC optimizations, reducing query execution time by 50%.
- ◆ Integrated dynamic data tables and form validation using vanilla JS and jQuery in internal admin tools.
- ◆ Developed Ruby scripts to support automated batch processing and data normalization for financial reporting systems.
- ◆ Utilized Rational Software Architect, Eclipse with Spring Tool Suite, and JBoss studio to streamline development and maintain code quality.
- ◆ Developed responsive UI components using HTML5, CSS3, JavaScript, jQuery, and Bootstrap, contributing to a self-service portal that reduced customer support calls by 20%.
- ◆ Development of a scalable banking integration platform using Java, XML, XSLT, and JSON APIs, resulting in a 30% improvement in transaction processing speed and enhanced data accuracy.
- ◆ Designed and optimized SQL queries for Sybase and Oracle databases, improving data retrieval times and application performance.
- ◆ Developed and maintained SOAP and RESTful web services, enabling seamless data exchange between distributed systems.
- ◆ Enhanced API performance by implementing caching strategies with Redis, reducing database load by 35%.
- ◆ Conducted system testing and bug fixes, ensuring robust application performance.

SENIOR SOFTWARE DEVELOPER

Jan 2011 - Feb 2013

CitiGroup

New Jersey

- ◆ **Project: ICG(Institutional Client Group) Toolkit**

- ◆ Developed GUI screens with SmartGwt, Ext Js, Struts 2, enhancing user interface efficiency.
- ◆ Automated processes, boosting system responsiveness and operational efficiency.
- ◆ Implemented AJAX, JSON, JavaScript, CSS, and HTML5 for dynamic front-end experiences, enhancing UI performance and interactivity.
- ◆ Wrote SQL/PL SQL in Oracle, enhancing database functionality and reliability.
- ◆ Configured Spring IoC container, ensuring seamless application framework integration.
- ◆ Automated system tasks and deployments using Bash scripting on Red Hat Linux, enhancing operational efficiency.
- ◆ **Project: Citi Velocity**
- ◆ Automated manual processes, enhancing system responsiveness and efficiency.
- ◆ Developed and optimized high-traffic web applications using JSP, JSF, Servlets, and RESTful/SOAP Web Services, improving user response time by 40%.
- ◆ Designed, developed, and deployed enterprise-grade Java/J2EE applications, optimizing middleware integrations and database performance.
- ◆ Developed Java batch jobs using concurrent threading, improving data processing speed.
- ◆ Integrated Tibco Messaging for real-time data feeds, optimizing information flow.
- ◆ Designed GUI screens with JQuery and Struts 2, improving user interaction.
- ◆ Managed Linux-based environments, providing system administration and support for development and production systems.

SENIOR SOFTWARE DEVELOPER

Mar 2010 - Dec 2010

Goldman Sachs

New Jersey

- ◆ Managed integration of financial apps, enhancing system efficiency and user access.
- ◆ Developed Java batch processes, leveraging advanced APIs and JDK features.
- ◆ Designed GUIs with JSP and Struts, improving user interaction and experience.
- ◆ Implemented data access with Spring and Hibernate, ensuring seamless database operations.
