

Zane Raza

Seasoned Software Developer | Full Stack | Senior Software Engineer
Alexandria, KY, United States | (513) 294 8509 | zain09cs@gmail.com | [LINKEDIN](#)

PROFESSIONAL SUMMARY

With over a decade of experience in the tech industry, I specialize in designing, implementing, and maintaining robust, scalable, and reliable web and mobile applications. I have a strong grasp of object-oriented programming principles and design patterns, and I'm proficient in integrating third-party APIs and libraries to enhance application functionality.

My expertise includes optimizing application performance and scalability through efficient coding practices and effective database management techniques. I have extensive experience with version control using Git and collaborative development within Agile frameworks. I possess excellent problem-solving skills and a keen eye for detail. I am committed to staying current with the latest trends and technologies in web development to deliver innovative solutions. As an effective communicator and team player, I excel in collaborating with cross-functional teams to deliver high-quality software solutions on time. My strong background in applying fundamental design principles ensures the delivery of scalable applications, and I consistently promote best practices while working on diverse customer projects.

WORK EXPERIENCE

Senior Software Engineer, *RTFSquare*

May 2022 - PRESENT

- Designed, developed, and deployed enterprise-grade integration solutions to streamline business processes and enhance system interoperability. I specialize in configuring webMethods Integration Server, Trading Networks, and Adapters to enable seamless data exchange between ERP, CRM, and eProcurement platforms. My expertise includes automating workflows using webMethods BPM, reducing manual effort by up to 40%, and ensuring real-time data synchronization across systems. I have also implemented robust monitoring and error-handling mechanisms to maintain system reliability and performance. My ability to collaborate with cross-functional teams and deliver scalable, secure integrations has consistently driven measurable improvements in operational efficiency and business outcomes.
- Led the end-to-end design, development, and deployment of mission-critical software systems, reducing operational inefficiencies by up to 40% and accelerating data-driven decision-making.
- Designing a cloud-native, distributed applications supporting 1M+ concurrent users, leveraging microservices, event-driven architectures, and containerization (Docker/Kubernetes).
- Architected RESTful/gRPC APIs and middleware solutions to unify disparate systems (ERP, CRM, IoT), achieving 99.99% uptime and enabling real-time analytics for stakeholders.
- Directed large-scale migrations of monolithic systems to modern tech stacks (e.g., Java → Scala/Python, Oracle → AWS Aurora), cutting infrastructure costs by 35% while enhancing scalability.
- Architected high-throughput databases (SQL/NoSQL) with optimized indexing, partitioning, and caching (Redis/Memcached), slashing query latency by 70% and ensuring ACID compliance.

- Implemented multithreading, load balancing, and message queues (Kafka/RabbitMQ) to process 10TB+ of daily data, paired with advanced monitoring (Prometheus/Grafana) for sub-second SLA adherence.
- Fortified systems against threats via OWASP Top 10 compliance, Devise/JWT authentication, and PCI DSS-certified encryption, achieving zero critical vulnerabilities in 5+ years of audits.
- Championed CI/CD pipelines (Jenkins/GitLab), Infrastructure-as-Code (Terraform), and Agile practices, reducing deployment cycles from weeks to hours and boosting team velocity by 50%.
- Partnered with C-suite and cross-functional teams to align technical roadmaps with business KPIs, driving \$5M+ in annual savings through automation and predictive analytics solutions.
- Utilized Devise for robust user authentication and authorization.
- Guided the development of software solutions that enhanced operational efficiencies, data accuracy, and security.
- Contributed significantly to the digital transformation of the sector.
- Optimizing the database indexes and refactoring the query, achieved a 50% reduction in processing time, which had a substantial impact on overall system performance.
- Microservices architecture allowed it to handle a 200% increase in traffic during peak hours without any degradation in performance.
- Page load times were reduced by 40%, leading to a significant improvement in user experience and a 25% increase in conversion rates.
- By adding the appropriate indexes and optimizing the queries, we were able to reduce the processing time by 70%.
- We added an automated retry mechanism that would attempt to process failed transactions up to three times before flagging them for manual review. This reduced the number of failed transactions by 40%.

Full Stack Engineer, *Clustox*

Sep 2018 - April 2022

- Worked as a Full Stack Engineer using front-end and back-end skills..
- Collaborated closely with product managers, backend engineers, and designers to deliver a high-quality product and user experience.
- Crafted custom Ruby gems to extend application functionality.
- Optimized ActiveRecord queries for improved efficiency.
- Implemented complex business logic into the system's core, facilitating unique eCommerce workflows such as dynamic pricing models and inventory management.
- Integrated third-party APIs for payment processing, shipping, and customer relationship management, ensuring seamless end-to-end transaction and customer service experiences.
- Contributed to advanced features like multi-tenant architecture and real-time analytics dashboards using WebSocket.
- Developed automated testing suites, enhancing platform reliability and user engagement.
- Employed caching strategies and background processing with Redis to elevate site responsiveness and handle peak traffic loads.
- Supported business growth and customer satisfaction in the competitive eCommerce landscape through efficient system performance and reliability enhancements.

Software Engineer, Kroger Technology

June 2015 - Aug 2018

- Employed caching strategies and background processing with Redis to enhance site responsiveness and ensure systems could handle peak traffic loads, supporting business growth and customer satisfaction in the competitive eCommerce landscape.
- Developed end-to-end features from scratch.
- Implemented real-time chat functionalities, including one-to-one and group chat, in web portals and provided backend support for mobile apps.
- Designed and updated architectural databases for web applications to manage dynamic data effectively.
- Applied the DRY (Don't Repeat Yourself) principle consistently to maintain clean and efficient code.
- Raised test coverage using RSpec and SimpleCov to ensure high-quality applications.
- Utilized AWS S3 buckets for storing pictures and videos, ensuring reliable and scalable media management.
- Managed deployments on Heroku and AWS, ensuring smooth and efficient application releases.

TECHNICAL SKILLS:

- **Programming Languages:** Ruby, Python, Golang, JavaScript (Node.js), Java, C#, SQL
- **Frameworks & Libraries:** Ruby on Rails (RoR), .NET, React, React Native, Vue.js, Next.js, Django, Flask, FastAPI, Express.js, Tailwind CSS, Bootstrap, Expo
- **Cloud & DevOps:** AWS, GCP, Azure, Docker, Kubernetes, Terraform, Jenkins, CircleCI, Heroku
- **Databases & Caching:** PostgreSQL, MySQL, MongoDB, Cassandra, Redis, Elasticsearch, Sphinx, Memcached
- **APIs & Architectures:** RESTful APIs, GraphQL, Microservices, Event-Driven Architecture (RabbitMQ, Apache Kafka), gRPC
- **Testing & Methodologies:** RSpec, Jest, Mocha, Chai, Capybara, TDD, BDD, CI/CD
- **Data Engineering:** ETL Pipelines, Data Warehouses/Lakes, Data Modeling, Normalization/Denormalization
- **Machine Learning & AI:** ML Ops, Deep Learning, NLP, Reinforcement Learning
- **Tools & Platforms:**
 - **Integration:** webMethods (Integration Server, Trading Networks, BPM), Workday (Financials, Integration Cloud), Jaggaer
 - **Version Control:** Git, GitHub, GitLab, BitBucket
 - **Middleware:** Configuration, Data Transformation/Mapping, Process Automation
 - **eCommerce:** Shopify, WCS (WebSphere Commerce)

EDUCATION:

Bachelor of Science: Computer Science, City University - New York.

CERTIFICATIONS:

AWS Certified Solutions Architect – Associate Provider: Amazon

Issued: July 2021

Expires: July 2024

Certification ID: AZ-400

AZ-400: Designing and Implementing Microsoft DevOps Solutions

Provider: Microsoft

Issued: July 2021

Expires: July 2024 Certification ID: AZ-400

AZ-300 Microsoft Azure Architect Technologies

Provider: Microsoft

Issued: July 2021
