👤 Profile

A highly proficient Full Stack Developer specializing in architectural decisions, infrastructure development, large database management, API development and Frontend Development. My experience is most focused on the Backend and skilled in programming languages including Python, JavaScript, Golang, and PHP, with expertise in frameworks such as Django, Flask, Node.js, React/Vue/Angular, and Laravel, among others. Adept at designing and optimizing databases, implementing robust security measures, and ensuring high performance and responsiveness in applications. Experienced in integrating various services and APIs, managing server infrastructure, and deploying scalable applications. Strong problem-solving abilities with in-depth knowledge of cloud platforms like AWS, GCP and Azure. Dedicated to maintaining and debugging server-side code to ensure reliable and scalable systems.

🏢 Professional Experience

Geobit AI, Senior Full-Stack Engineer

10/2023 - present

- Led the redesign of project architecture, transitioning from legacy systems to modern frameworks using **Python/Flask** and **JavaScript/React**.
- Designed and implemented a distributed system leveraging microservices and serverless architectures to ensure scalability and resilience.
- Developed a GPS tracking system capable of managing over 100 devices, utilizing **AWS Lambda**, **Python** scripts, and **React Native** for seamless real-time location tracking.
- Developed and implemented a real-time data streaming process using **Apache Kafka** and **Apache Spark** for data ingestion and real-time analytics, and **Python/Django** for processing and transforming data streams.
- Maintained and optimized **infrastructure** and **CI/CD** pipelines using **Docker**, **Kubernetes**, **Terraform**, **Jenkins**, **Git**, and **AWS** to ensure smooth deployment and scalability.
- Integrated **OpenAI** into **geolocation** analysis workflows, utilizing advanced features such as fine-tuning and file processing to enhance data-driven insights.
- Implemented a **Retrieval-Augmented Generation (RAG)** system by integrating the **Ollama LLM** model for enhanced contextual retrieval and response generation.

- Mentored and guided two developers through pair programming, architectural decision-making, and code reviews, fostering a collaborative and productive development environment.

Mixpanel, Senior Backend Engineer

08/2019 – 09/2023

- Executed a comprehensive microservice architecture project using **PHP**, **Laravel** and **Symfony**, resulting in a streamlined and efficient system that boosted overall performance and scalability of the platform by 50%.
- Utilized **docker** for containerization of the project and deployed project into **AWS**.
- Implement the **Unit test** and E2E test using **phpunit** and **selenium**.
- Built asynchronized Notification REST web service to send mess email/SMS with Laravel and **AWS SQS**.
- Used **GraphQL** to fetch data that is required for a component and feed that data into the redux store avoiding multiple API calls to the backend.
- To monitor and diagnose performance issues and errors, I made logging and monitoring tools that provided real-time insights and metrics such as response time and errors rates.
- Involved in entire lifecycle of the delivering system including Design, Development, and deployment, Testing and implementation and support.
- Good working experience in designing database for delivering system using **Oracle** and using several algorithms for minimizing delivery time, reducing deliver costs and so on.
- Managed and maintained development of **Javascript/Node.js** backend for interactive database driven websites.
- Working on Migration of the project from older version of PHP 5 to the latest version (8).

Supermetrics, Software Developer

11/2016 – 07/2019

- Engineered Microservices architecture using **JAVA** language and **REST** web services, optimizing client's system for scalability and performance; reduced **API** response time by 40%.
- Developed permission model for provisioning application using **vue.js**, **postgres**, **Golang**.
- Providing guidance and mentorship to team members, assisting with problem-solving, code reviews, and architectural decisions
- Designed, optimized and managed **PostgreSQL** databases with several methods such as indexing, denormalization/normalization and so on.
- Built the infrastructure using **docker** and deployed to **GCP**.
- Implemented the Elasticsearch and improved the api loading time by 40% using redis.
- Implemented advanced security protocols including password hashing and **SSL** encryption to fortify application against cyber threats; safeguarded user data and reduced risk of potential breaches by 40%.

Education

Bachelor's Degree in Computer Science,
University of California

04/2012 - 10/2016

Skills

Language

Python, Javascript, Typescript, Golang, PHP, JAVA, SQL

Library & Frameworks

Django, Flask, Fast API, Node.js, React, React Native, Vue, Angular, Next.js,
Laravel, Symfony, Spring, Kotlin

Infrastructure & CI/CD

Docker, Kubernetes, Terraform, Jenkins, Git, Salt, AWS, GCP, Azure

Database

PostgreSQL, MySQL, Oracle, MongoDB, Redis, Salesforce, Elasticsearch, Snowflake,
Apache Spark, Apache Kafka

Other

OpenAI, LLM, Restful API, GraphQL, GIS
