

Alexander Suglio

Senior Full Stack Engineer | Miami, Florida, United States | +1 786 432 5855

suglioalex@gmail.com | linkedin.com/in/alexsuglio

Skills

- **Languages:** C#, Javascript, TypeScript, Python
- **Frameworks:** ASP.NET Core, Blazor, WPF, Spring, Django, Visual Basic .NET (VB.NET)
- **Frontend:** Node.js, Angular, React.js
- **ORM:** Entity Framework, ADO.NET
- **Database:** SQL, Amazon Dynamodb, CosmosDB, Oracle, MySQL, PostgreSQL, MongoDB
- **Unit Testing:** NUnit, XUnit, MSTest, Apache, Cypress, Moq
- **DevOps:** TeamCity, Azure DevOps, Jenkins
- **Cloud:** AWS, Azure
- **Other:** Jira, Confluence, Kanban, Agile, MS Dynamics 365

Experience

CVS Health

Senior Full Stack Engineer

Remote

05/2023 – 03/2025

- Leveraged **ASP.NET Core 6** and **Angular** within a **cloud-native microservices** framework to modernize a legacy website originally developed with **ASP.NET Web Forms**.
- Engineered **Azure infrastructure** with **App Services**, **Active Directory**, **Azure Functions**, **Logic Apps**, **Service Bus**, and **Kubernetes Services**, resulting in \$50000 in cost savings and improved development workflows.
- Conducted performance tuning and query optimization using **Performance Monitor**, **SQL Profiler**, and monitoring tools such as **Grafana** and **Datadog**.
- Enhanced the performance of on-premises **Microsoft SQL Server** by rewriting **T-SQL scripts** and stored procedures with **Entity Framework Core 6**, achieving a 10% increase in performance.
- Implemented **SOLID principles**, **Repository**, and **Factory design patterns** in projects while transitioning from **SOAP** to **RESTful API calls**, improving integration with external services.
- Refactored legacy services into **ETLs** and **.NET** services, boosting reliability and performance for data movement, which saved millions annually in operational costs.
- Integrated **Azure microservices** with **Dynamics 365**, enabling seamless synchronization with **Azure SQL databases** via **Azure Functions**, enhancing patient data management.
- Migrated the **CI/CD pipeline** from **TeamCity** to **Azure DevOps** for servers, reducing deployment time by 20%.
- Updated **Azure DevOps pipelines** using **Terraform** to automate the deployment and configuration of **Azure API Management**, ensuring automatic mapping to **Azure Function Apps** endpoints.
- Executed **unit** and **integration testing** using **Jasmine/Karma** for **Angular** and **NUnit** for **C#**, achieving over 85% test coverage to ensure software quality.
- Led and mentored an **Agile** team of 8 developers, providing technical direction and fostering a collaborative atmosphere to deliver high-caliber software products through effective Scrum practices.

- Modernized a legacy lab management system by transitioning from **ASP.NET Web Forms** to **ASP.NET MVC 5**, **Entity Framework 6**, **Angular 8**, **LINQ**, and **SSRS**, adhering to **TDD** and **Agile** methodologies.
- Championed the implementation of **microservice architecture**, utilizing **REST** and **AWS** for the development, testing, and deployment of identity microservices, with a focus on **Azure AD** and **Access Management**.
- Revamped a **VB.NET** patient portal into a **React/Next.js**, **.NET Core 6**, **MaterialUI**-based web application, ensuring compliance with **HL7**, **FHIR**, and **HIPAA** for secure data exchange.
- Designed and implemented **OAuth**, **SSO**, and **SAML** solutions, enhancing user authentication efficiency by 30% across applications.
- Established server infrastructure using **AWS**, handling volume imports, launching **EC2** instances, **RDS**, configuring security groups, auto-scaling, and load balancers, which optimized server setup and cut deployment times by 20%.
- Leveraged **AWS** Cloud technologies like **EKS**, **CloudFront**, **CloudFormation**, **CloudWatch**, and **DynamoDB** to improve application performance and scalability, ensuring an excellent user experience.
- Analyzed over **1TB** of healthcare data logs using **KQL**, improving monitoring and performance optimization of critical healthcare systems.
- Facilitated to the architecture of a company dashboard using **Vue.js** for the frontend and **Python Django** for the backend, leading to a 12% enhancement in user experience.
- Innovated a pagination system for an AI-based image generation platform using **AWS DynamoDB** and **Node.js** in conjunction with **Redis**.
- Created an **AWS ETL** pipeline utilizing **Lambda triggers**, **Node.js**, and **Kinesis Firehose** to synchronize data from **DynamoDB**, achieving a 5% reduction in data transfer times.

- Developed 10 web pages using **C#** and the **.NET framework**, achieving a page load time of 1 second.
- Transitioned 2 existing **ASP.NET frameworks** to **ASP.NET MVC** architecture with **Telerik Kendo UI**, optimizing performance by 30%.
- Created web forms in **ASP.NET** with **C#** as the backend language and harnessed **LINQ** for **SQL** data consumption.
- Extended **WCF** for building service-oriented architectures (**SOA**) to ensure compatibility across platforms in web services.
- Applied **ADO.NET** for database connectivity and populated backend data using **SQL Server**.
- Enhanced 2 **Oracle PL/SQL packages**, stored procedures, functions, and materialized views for **Oracle CCB – Meter Data Management System (MDMS)**, increasing data retrieval efficiency by 20%.
- Architected and documented **REST/HTTP APIs**, defining precise **JSON** data schemas and implementing an **API** versioning strategy that improved system flexibility and maintained backward compatibility, resulting in a 25% reduction in development time.
- Demonstrated expertise in **Agile** methodologies, Test-driven development (**TDD**), and programming paradigms.
