

Anishkumar Sargunakumar

(Local to Charlotte, NC)

PROFESSIONAL SUMMARY:

- Java/J2EE Microservices Developer with 6+ years of experience in Application Analysis, Design, Development, Integration, deployment, testing, debugging, documentation and Maintenance/Support for Web, Standalone, and Client - Server based Software Applications using Object Oriented Programming Concepts, Java and Java EE (Servlets, JSP, JDBC, JNDI, EJB), Web Services (REST, SOAP), Java Script, HTML, CSS and XML
- Experience in various open-source frameworks like Spring 3.0, Spring Webflow and ORM Technology like Hibernate
- 3.0 and MyBatis.
- Expert in core java concepts like Collection Framework, Multi-threading, Generics, Annotations, Serialization, Thread pools, JavaBeans, Externalization.
- Experience and ability to support Assessment phase and evaluate Design, Code, build / deployments relating to
- Microservices.
- Experience with ELK stack, SPLUNK
- Experience in using build/deploy tools such as Jenkins, Docker, and OpenShift for Continuous Integration & Deployment for Microservices
- Experience working with Bash/shell and python scripting on various environments building new scripts and modifying the existing scripts as per requirement.
- Good Experience on working with amazon webservices like EC2, S3 and AWS Identity and Access Management
- Proficient in managing the complete lifecycle of Spring beans including annotations such as @PostConstruct and
- @PreDestroy and leveraged InitializingBean and DisposableBean
- Highly Proficient in using OOPS for building n-tier architecture systems with hands on development expertise in front- end UI layer, application layer including middleware, core business frameworks and Back-end database layer integration.
- Experience in writing Gradle, Maven build scripts and configuring and using Log4j and writing JUnit test cases.
- Strong working knowledge of Programming and maintaining databases like SQL, PL/SQL, Postgres, and Stored Procedures also NoSQL databases like MongoDB.
- Expert in Spring Boot in building cloud Microservices and developing Spring-based applications with very less configuration.
- Experienced in the asynchronous processing of messages using Kafka.
- Experience in testing with JUnit Framework using Mockito and Spring JUnit Runner.

EDUCATION:

- Master of Science, Mechanical Engineering, State University of New York, Binghamton, Watson School of Engineering, 2018
- Bachelor of Engineering, Mechanical Engineering, Anna University, Chennai, India, 2015

CERTIFICATION:

Lean Six Sigma Green Belt

PROFESSIONAL EXPERIENCE:

BANK OF AMERICA, CHARLOTTE, NC

MAY 2024 – PRESENT

Software Developer

- Project was developed based on Agile and actively participated in the daily SCRUM meetings to produce quality deliverables on time.
- Interacted with Business Analysts to come up with better implementation designs for the application.
- The front-end use HTML5, CSS3 and Bootstrap to build a single page web app that communicate with back-end via
- RESTful API.
- Developed the application using Spring Web MVC framework. Worked with Spring Configuration files to add new content to the website. Worked on the Spring DAO module and ORM using Hibernate.
- Implemented various J2EE Design patterns like Singleton, Service Locator, Business Delegate, DAO, Transfer Object, and SOA.
- Developed services following SOAP architecture and utilized internally developed ESB and JMS.
- Designed and developed Microservices business components using spring.
- Developed Restful Microservices using Spring Rest and MVC, for OSS services.
- Enhanced an existing Java Microservices to retrieve specific customers for a store location based on the user IDs provided.
- Spring boot-based services interacting through a combination of REST, Spring Cloud.

Software Developer

- Working in Call Detail Record (CDR) project where migration from java Apache camel framework to ruby elk (elastic, logstash, Kibana) stack.
- Developed Docker image for java application, optimizing build processes and ensuring consistency across development, testing and production environments.
- Used Kubernetes PersistentVolumeClaim (PVC) concept in creating a java spring boot service and made it to interact with ruby microservices.
- Implemented and maintained Kubernetes clusters for container orchestration, managed deployment, scaling and maintenance of microservices.
- Developed Helm Charts to define, install and upgrade Kubernetes applications, encapsulating configuration and dependencies.
- Implemented the application using Spring Boot framework and handled security using Spring Security.
- Implemented DAO Access Layer (DAL) using Spring data and Hibernate ORM tool.
- Worked on PM transformation Project, created microservices and dockerized the image and deployed as Kubernetes pods.
- Implemented Micro Services framework with Spring boot and OpenShift containerization platform (OCP).
- Collaborate with customers and onsite/offshore developers/testers in order to execute projects through full lifecycle software development.
- Responsible for implementing monitoring solutions in Docker, and Jenkins.
- Wrote SQL queries to setup relational database with normalized tables using MySQL and used sub-queries and joins for complex queries involving multiple tables and exception handlers.
- Implemented DAO interfaces and service classes using JDBC Template
- Configured Dispatcher servlets with included ViewResolver and Session Factory and property file.
- Responsible for creating Model/Value Objects in MVC Design Pattern

Software Developer

- Involved in analysis, specification, design, and implementation and testing phases of Software Development Life Cycle (SDLC) and used agile methodology (SCRUM) for developing application.
- Worked with Java 1.8 Streams API and parallel Streams API for enabling parallel processing of collections in distributed environment.
- Developed server-side application to interact with database using Spring Boot and Hibernate.
- Developed Spring Boot based services interacting through a combination of REST, Spring Cloud.
- Experience and ability to support Assessment phase and evaluate Design, Code, build / deployments relating to Micro services.
- Designed and developed application using various Spring framework modules like Spring IOC, Developed Controller Classes using Spring MVC, Spring AOP, Spring Boot, Spring Batch, Spring Data modules and handled security using Spring Security.
- Involved working with Git version control system and Jenkins release management tool.
- Wrote Jenkins pipeline as code using Groovy, defining entire build and deployment workflows.
- Configured Maven as automation build tool, Jenkins for continuous integration and Rally for User Stories creation and application of Agile Methodology. Used GIT, perforce for version control and Performed unit testing using Testing, Junit.
- Experience on the refactoring of monolithic applications to a microservices hosted on docker and Kubernetes containers.
- Kubernetes is being used to orchestrate the deploying, scaling, and management of docker containers.
- Developed Stored Procedures, functions using SQL, Oracle, DB2, PostgreSQL databases.
- Kubernetes is being used to orchestrate the deploying, scaling, and management of docker containers.
- Implemented persistence layer using various features of Hibernate 3.5 framework like HQL queries, criteria etc.
- Developed and executed Unit Test cases using J-Unit framework by supporting TDD (Test Driven Development).
- Involved in CICD process using GIT, Jenkins job creation, Maven build and publish and Fabric implementation.
- Used JDBC for database connectivity with oracle.

Software Developer

- Collaborate with customers and onsite/offshore developers/testers in order to execute projects through full lifecycle software development.
- Deployed and orchestrated the applications with Kubernetes.
- Responsible for implementing monitoring solutions in Docker, and Jenkins.

Professional Resume

- Worked in container-based technologies like Docker, Kubernetes and OpenShift. Point team player on OpenShift for creating new projects, Services for load balancing and adding them to routes to be accessible from outside, troubleshooting pods through ssh and logs, modification of build configs, templates, image streams, etc.
- Created and optimized Helm charts for deploying microservices on OpenShift clusters.
- Designed and developed application using various Spring framework modules like Spring IOC, Developed Controller Classes using Spring MVC, Spring AOP, Spring Boot, Spring Batch, Spring Data modules and handled security using Spring Security and Spring Data JPA.
- Integrated Java applications with various AWS databases such as Amazon RDS (Relational Database Service) and Amazon DynamoDB (NoSQL Database)
- Designed and implemented scalable and resilient cloud architectures for java applications on AWS.
- Implemented serverless solutions using AWS Lambda and API Gateway for java based Microservices.
- Deployed applications using AWS Elastic Beanstalk and/or created custom deployment pipelines with AWS Code Pipeline
- Creation and maintenance of data using Oracle database. JDBC for database connectivity with Oracle.
- Splunk tool to configure and display logs in Splunk web.
- Developed Stored Procedures, functions using SQL, Oracle, DB2, PostgreSQL databases.
- Kubernetes is being used to orchestrate the deploying, scaling, and management of docker containers.
- Implemented persistence layer using various features of Hibernate 3.5 framework like HQL queries, criteria etc.
- Used spring config server for centralized configuration and Splunk for centralized logging. Used Concourse and Jenkins for Microservices deployment.
- Worked with JSON notations to populate the data from server to client screens.
- Used Java Messaging Services (JMS) and Message driven beans (MDB) listening to container managed queue objects to enable asynchronous communication.
- Used Maven and Gradle as build tools.
- Developed a tool to retrieve and send data to third party service provider. This feature was implemented using XML, SOAP.
- Involved in building and deployment of the application in a Linux environment.
- Experience in troubleshooting and Network upgrades, Firewall installation, Wireless, routing, subnet, Telepresence.
- Established Continuous Integration (CI) practices and standards in creating APIs with Jira, Jenkins.
- Worked in Agile Methodology.

EYE-FI, LAS VEGAS, NV

NOV 2018 – OCT 2019

Java/J2EE Engineer

- Involved in all the phases of SDLC including Requirements Collection, Design & Analysis of the Customer Specifications, Development and Customization of the Application.
- Followed complete Agile methodology starting from Product backlog, Sprint Backlog, Sprint Planning, User stories etc.
- Implementation of REST- API for services and controlling access to the databases. NodeJS for communication between mobile devices and backend.
- I have good experience specially creating Microservices and linking Microservices to service-based implementing controller skilled and access through microservice.
- Using Spring boot which is radically faster in building Microservices and develop spring-based application with very less configuration.
- Removed all the XML based configurations required to build the MVC application and maintained in the classes using Spring boot.
- Used Spring Core Annotations for Dependency Injection Spring DI and Spring MVC, REST API s Spring boot for Microservices and Spring Batch for Running Batch Jobs
- Developed Accounting System using Spring boot, Spring Data.
- Developed backend web services using Node JS and stored dependencies using NPM.
- Developed REST clients using Spring REST template to interact with existing REST Microservices.
- Implemented Microservices using Spring boot, Spring Cloud, Spring Microservices, and enabled discovery using Netflix eureka server.
- Responsible for creating efficient design and developing user interaction screens using HTML, CSS3, Bootstrap, Javascript and Angular 6.
- Enhanced application performance by Angular 6 component based development in view of future Angular framework transitions.
- Hands-on experience working with Continuous Integration (CI) build-automation tools such as Maven, SVN, CVS, Jenkins, and Apache Ant.
- Created SOAP testcases for different test scenarios and integrated the test suite to Jenkins.
- Developed application using Struts MVC, JSP, JSTL on the presentation layer.

Professional Resume

- Developed REST-full web services using Struts Framework.
- Built a RESTful API to save and retrieve agent information in Java using Struts MVC, Apache CXF and JAX-RS.

COGNIZANT TECHNOLOGY SOLUTIONS, CHENNAI, INDIA

JAN 2016 – JUN 2016

Programmer Analyst Trainee

- Implemented object/relational persistence (Hibernate) for the domain model.
- Used Hibernate ORM framework integrated with Spring framework for data persistence and transaction management.
- Primarily focused on the spring components such as Spring MVC, Dispatcher Servlets, Controllers, Model and View Objects, View Resolver.
- Used MongoDB document-oriented database to store data.
- Developed and implemented the MVC Architectural Pattern using Spring framework, JSP, Servlets and Action classes.
- Worked on multithreading and involved in thread creation and resource allocation.
- Coordinates the cross-functional and/or cross-segment teams.
- Created Spring MVC - rest based JSON services, used rest template for making a client call to JAX-RS web services.
- Created POJO classes, spring configuration files to use dependency injection.
- Specified the default initialization file is through the log4j.configuration system property and loaded the log4j.properties from Web logic Classpath.
- Document changes as required of problems with the legacy system for changes in the newly implemented system.

SYMANTECH SOLUTION, CHENNAI, INDIA

MAY 2014 – JAN 2016

Software Trainee

- Involved in all the phases of SDLC including Requirements Collection, Design & Analysis of the Customer Specifications, Development and Customization of the Application.
- Followed complete Agile methodology starting from Product backlog, Sprint Backlog, Sprint Planning, User stories etc.
- Implemented cross cutting concerns as aspects at Service layer using Spring AOP and of DAO objects using Spring- ORM
- Spring beans were used for controlling the flow between UI and Hibernate
- Used Eclipse IDE for development and JBoss Application Server for deploying the web application.
- Used Web Logic as application server and Log4j for application logging and debugging.
- Used spring framework to the DAO and Bean objects, auto wiring the components.
- Consumed SOAP and Restful Web Services, used Webservices to extract client related data from databases using WSDL, XML and SOAP.
