

ANUSHA PANDIRI | Java Software Engineer

Location: GA | Phone: (865) 446 – 0497 | Email: pandirianusha2510@gmail.com | [LinkedIn](#)

SUMMARY

- Developed scalable, enterprise-grade applications using Java, Spring Boot, and REST APIs, modernizing legacy systems and improving backend performance.
- Engineered microservices and secure APIs with OAuth2, JPA, and RBAC, enhancing system modularity, access control, and regulatory compliance across MySQL and MongoDB.
- Migrated monoliths to Node.js/Express.js and introduced event-driven architecture to boost responsiveness and scalability for real-time systems.
- Built responsive front-end interfaces with React, HTML, CSS, and JavaScript, improving UI/UX and ensuring WCAG 2.1 accessibility compliance.
- Delivered high-availability cloud deployments using Kubernetes, Docker, Helm, and automated CI/CD pipelines via Jenkins, Maven, and Adobe Cloud Manager.
- Integrated Adobe Experience Manager (AEM) with DAM, Target, Marketo, and multilingual tools to power dynamic, localized digital marketing experiences.
- Optimized content management and asset workflows using metadata-driven automation in AEM, streamlining editorial operations and localization.
- Enhanced observability and diagnostics with ELK Stack, Dynatrace, and New Relic, while enabling predictive telemetry with Infosys Nia.
- Strengthened DevOps and QA practices with automated testing (TestNG, Cucumber), containerization, and cross-browser/mobile testing protocols.
- Fostered collaboration through Agile methodologies, API documentation (Swagger), knowledge sharing via Confluence, and mentoring of junior engineers.

SKILLS

Languages:	Java, JavaScript, HTML, CSS, SQL, Node.js
Frameworks & Libraries:	Spring Boot, Spring MVC, Spring Cloud Gateway, Netflix Zuul, Java EE, Spring Data JPA, Express.js, React.js, AJAX, jQuery, Swagger/OpenAPI, TestNG, Cucumber, Selenium, BDD
Databases:	MySQL, MongoDB, Kafka, RabbitMQ, Elasticsearch, Aggregation Pipelines (MongoDB)
Tools:	Jenkins, Git, GitHub, Maven, Adobe Cloud Manager, Ansible, Helm, Kubernetes, Docker, SonarQube, ELK Stack (Elasticsearch, Logstash, Kibana), Dynatrace, New Relic, Confluence, Swagger/OpenAPI, Adobe XD
AEM Technologies:	Adobe Experience Manager (AEM/CQ5), DAM, Adobe Target, Marketo, Dispatcher (dispatcher.any), Global Link Translator, Tagging, Versioning, Access Control, Custom Data Layers, Campaign Tracking
Cloud Platforms:	Kubernetes (AKS/EKS/GKE agnostic), Docker, Adobe Cloud Manager
Version Control:	Git, GitHub
Web Technologies:	React.js, HTML, CSS, JavaScript, AJAX, jQuery, RESTful APIs
Other:	Microservices Architecture, API Gateway Integration, API Versioning, Exception Handling, API Authorization, Role-Based Access Control (RBAC), WCAG 2.1 Accessibility, InfoSec Policy Alignment, Metadata-Driven Workflows, Strategic Indexing, Technical Documentation, Agile Methodologies, SIT & UAT Support, UI/UX Team Collaboration, Business Analyst Coordination, Localization Workflows, Predictive Analytics Use Cases

EXPERIENCE

Java Software Engineer | UST Global, USA

April 2021 – Present

- Modernized core backend systems to support digital transformation initiatives by engineering scalable enterprise-grade applications using Java, Spring Boot, and RESTful APIs, resulting in a 30% boost in backend efficiency.
- Secured sensitive data in compliance-heavy environments by developing Spring Boot APIs integrated with Spring Data JPA and OAuth2, ensuring robust access control and regulatory alignment with MySQL.
- Improved real-time responsiveness for legacy systems by migrating them to Node.js with an event-driven architecture, leading to significantly faster response times and better scalability.
- Enhanced user experience and UI performance by designing dynamic, responsive web interfaces using React, which led to faster page load times and increased engagement across client-facing portals.
- Reduced microservice failure rates by 25% by building RESTful services using Express.js, enabling seamless communication across distributed applications.
- Improved data retrieval times by 40% by optimizing interactions with MongoDB, leveraging aggregation pipelines and strategic indexing to support high-volume data workloads.
- Minimized deployment inconsistencies by 45% by containerizing services using Docker, ensuring consistency across development, staging, and production environments.
- Enabled fault-tolerant and scalable cloud deployments by orchestrating microservices through Kubernetes, ensuring high availability and simplified infrastructure scaling.
- Accelerated release cycles and improved code reliability by implementing and maintaining CI/CD pipelines using Jenkins, Git, and Maven, while integrating SonarQube for static code analysis and conducting mobile/cross-browser testing to ensure UI consistency and enforce delivery governance.
- Reduced knowledge transfer gaps and onboarding time by documenting API specs using Swagger/OpenAPI and maintaining project knowledge in Confluence, ensuring clarity across global development teams.

Software Engineer | Infosys Ltd.**Apr 2019 – Mar 2021**

- Architected modular service layers for Infosys clients using Spring MVC and REST, enabling plug-and-play development across digital banking and healthcare platforms.
- Facilitated seamless API gateway integration using Spring Cloud Gateway and Netflix Zuul, streamlining service discovery and request routing for high-throughput applications.
- Devised robust exception-handling and retry logic for resilient API communication, reducing downstream service errors and enhancing system fault tolerance.
- Refactored legacy Java EE applications into Spring Boot microservices, reducing technical debt and improving deployment frequency within modernization programs.
- Enabled asynchronous data exchange with Kafka and RabbitMQ to support real-time data ingestion pipelines for logistics and retail sector clients.
- Collaborated with Infosys' Experience Design (XD) teams to align backend API structures with evolving front-end requirements, improving design-to-development turnaround by 25%.
- Standardized logging practices across microservices using SLF4J, Logback, and integrated with ELK Stack, improving traceability and production diagnostics.
- Mentored junior developers through Talent Transformation Program by conducting peer reviews, walkthroughs, and hands-on coding sessions focused on enterprise-grade Java practices.
- Conducted root cause analysis and resolution for production issues using Dynatrace and New Relic, improving MTTR (Mean Time to Recovery) by 30% for critical applications.
- Championed automated testing strategies using TestNG and Cucumber, enabling full-stack behavior-driven testing across agile pipelines and ensuring compliance with Infosys' quality engineering standards.
- Orchestrated deployment configurations using Ansible and Helm for Kubernetes-based applications, promoting environment consistency and rapid rollout for client production clusters.
- Leveraged Infosys Nia for predictive analytics in application telemetry, generating insights that informed performance tuning and proactive capacity planning.
- Defined and implemented role-based access controls (RBAC) and API authorization logic, aligning with client-specific InfoSec policies in government and pharma sectors.
- Participated in continuous design improvement sessions with Enterprise Architects, contributing to system blueprinting for next-gen ERP, CRM, and fintech solutions.
- Evaluated new open-source Java libraries and tools, contributing to internal proof-of-concepts and helping project leads select appropriate tech stacks based on scalability and security benchmarks.

AEM Developer | Infosys**Feb 2014 – Jan 2018**

- Engineered a multilingual content management system by developing master and locale-specific sites in AEM (Adobe CQ5) for Zovirax, streamlining code reuse and reducing maintenance overhead.
- Collaborated with business analysts and UI/UX teams to define and implement scalable content authoring workflows using Adobe CQ5, enhancing content governance and editorial efficiency.
- Customized reusable components and templates for the Abreva website using Java, HTML, CSS, and JavaScript, improving consistency and reducing development time across marketing campaigns.
- Integrated metadata-driven workflows within AEM to automate digital asset management (DAM), increasing asset discoverability and usage tracking for marketing teams.
- Optimized front-end interactivity using AJAX and jQuery to create responsive and intuitive user experiences, improving site engagement and reducing bounce rates.
- Leveraged Adobe CQ5 features to manage structured content, improving localization rollout efficiency across multiple regions and supporting faster time-to-market.
- Implemented WCMS features such as tagging, versioning, and access control to strengthen content security and editorial flexibility.
- Conducted post-deployment validation and defect resolution during SIT and UAT phases, ensuring stable releases and timely delivery in a regulated environment.
- Documented technical solutions, component behaviors, and localization workflows to facilitate cross-functional knowledge sharing and accelerate onboarding of new developers.

EDUCATION & CERTIFICATES**Bachelors in Engineering****Jun 2013**

Swami Vivekananda Institute of Technology, India

- **Adobe Certified Expert – Adobe Experience Manager**
- **Java SE Programmer – Oracle**
