

SUMMARY

Management Expertise:

- Overall 16 yrs. Of overall IT experience in Quality Assurance as a Project Manager
- Experienced in developing Software Project Plan, Resource Planning, Offshore Onsite Project Co-ordination
- Experience with large-scale Projects like enterprise, healthcare, Insurance, Hardware installation etc.
- Experience in managing multiple projects independently and handled cross functional teams
- Responsible for demonstrating Projects Weekly and Monthly Status reports (WSR & MSR)
- Responsible for identifying Resources for various levels of the project implementation process, tracking milestones from cross functional teams (include Product Owners, BA, Vendors, Development, Performance, Automation) and project deliverables/artifacts
- Identify/anticipate impendence/Issues and escalate it to right resources/team for resolution
- Responsible for conducting various events like PI Planning, Sprint Planning, Daily Standup, Retrospective in Agile project management
- Proficient in Functional, Negative, Regression, System integration (SIT), acceptance (UAT), security, browser compatibility, and performance testing

Technical Experience:

- Safe Certified Scrum Master and Team Practitioner (Safe4 certified)
- Experience in Waterfall and Agile software development methodologies
- Responsible for identifying objects and update test scripts in Python for missing functions.
- Experience in Healthcare, Manufacturing, Retail and Insurance domain knowledge
- Experience in API Testing (POSTMAN) web application used for Tracking Prescription Deliveries
- Expert in Point of Sale (POS) device setup and validation. Validated POS application by integrating Vendor application (Pharmacy app) with wireless Cayan's Mobile payment device.
- Performed Responsive Testing (Mobile devices) and Browser Compatibility Testing using Browser stack for Honeywell Share point site and validated the website on more than 20 form factors for each cycle of execution
- Managed Load, Performance and Endurance testing for McKesson Pharmaceuticals using typical Pharmacy Profile
- Successfully completed three testing projects started from scratch (McKesson, Honeywell & Delta Financial Systems
- Maintain Test Data and analyze for each requirement and Status report related to project
- Responsible for estimating requirements and budget allocation for QA projects
- Extensive experience in all areas of Software Testing Life Cycle - Requirement Analysis, Test Planning, Test Case Development, Environment Set up, Test Execution and Test Cycle Closure
- Very Good in Test Execution Process, Defect Life Cycle, and Test Plan
- Detecting bugs & classifying them based on severity
- Expertise in Test Management tools like Microsoft Test Manager 2010 , HP ALM and Defect Management Tool JIRA, Kanban, Postman
- Automated Honeywell SAP application (BPT method - Business Process Testing) by using keywords coded in NTTDATA framework for automation.
- Always been recognized as an Excellent Team player by Managers in helping out teammates to avoid crisis situation. Have always been proactive towards team building activities

TECHNICAL SKILLS

FUNCTIONAL

- Develop Software project plans
- Resource planning
- Task Schedule and Tracking
- Defect Management
- Status reporting
- Defect triage/reporting

TECHNOLOGY

- Databases – SQL
- Operating systems - Windows and IOs
- Tools – POST MAN, Kanban, Jira, CI/CD, FTP, ALM (Quality Center), JIRA, Browser Stack, HP Quality Center BPT, VS Test Manager, Dev track, QTP, Visual Studio 2012 Premium.
- Python Test Scripts for Web Application

PROFESSIONAL EXPERIENCE

Company: NTTDATA Inc
Location: Livonia MI
Start date: May 2014 – April 2022

Client/Project: McKesson - Pharmaserv

May 2014 – April 2022

Title: QA Project Manager

Pharmaserv is a next generation pharmacy management solution and has a growing demand in the industry. The product is a workflow-based solution for independent and chain customers. McKesson requires functional Testing support for a windows based application using Test management tool Quality Center and JIRA for defect management.

Responsibilities:

- Prepare Test Plan and estimating requirements for each release
- Developed Software Project Plan, Resource Planning, Offshore Onsite Project Co-ordination
- Responsible for managing multiple projects independently and handled cross functional teams
- Responsible for identifying Resources for various levels of the project implementation process, tracking milestones from cross functional teams (include Product Owners, BA, Vendors, Development, Performance, Automation, Point of Sale Application, QA Offshore and Hot Fix team) and project deliverables/artifacts
- Identify/anticipate impendence/Issues and escalate it to right resources/team for resolution
- Responsible for conducting various events like PI Planning, Sprint Planning, Daily Standup, Retrospective in Agile project management
- Prepared weekly and monthly QA Defect and Status Reports to the different Stake holders of the project using Quality Center (WSR & MSR)
- Analyze and understand the Business Processes.
- Responsible for validating POS card transactions on production environment and Mobile devices
- Clarify questions raised on requirements by offshore team
- Responsible for managing and tracking environment set up at onsite for POS testing and other workflow testing (rebuilding or reimage 2012, 2014, 2016 server,) for testing Hot Fix, Functional and Performance testing
- Worked directly with McKesson's Customer during Beta testing and track defects reported by customer to closure

Company: NTTDATA Inc
Location: Chennai India
Start date: July 2006 – April 2014

Client/Project: Honeywell - GWP Functional and Browser Testing (Salesforce Enterprise Product)
Chennai India.

December 2012 – April 2014

Offshore QA Asst Project Manager

Honeywell International is a diversified technology and manufacturing leader, serving customers worldwide with aerospace products and services; control technologies for buildings, homes and industry; automotive products; turbochargers; and specialty materials.

ACS GWP project requires support in functional and Browser testing of GWP Share Point 2010 (V1 & V2 skin). Project involves functional testing of GWP share point 2010 based web site regression test scripts using Visual Studio Test Manager 2010 and Visual Studio Premium 2012 and Cross browser & Cross device testing using Browser Stack.

Responsibilities:

- Test case creation and maintenance of Honeywell GWP Salesforce website
- Ad-hoc / Manual testing of GWP and document the scenarios
- Sharing the test results with GWP Management team.
- Creating bugs in the bug tracking system (Share Point Defect Tracker) based on the test results
- Browser compatibility testing and result analysis using Brower Stack
- Responsive Testing on Honeywell Share point site
- Created End-User documentation in between testing cycles.
- Develop Automated Test Scripts using Visual Studio 2008
- Execute Automated Test Script using Test Manager
- Analyze and understand the Business Processes.
- Configure/Customization the SFDC automation components to meet Honeywell SFDC environment
- Execute automated scripts from Test Lab of QC (11.0) using Quick Test Pro (11.0) and report results to Client
- Debug Automated Test Script and fix failures
- Execution of Automated test scripts on Quality & Production Environment.

Client/Project: Delta Financial Systems
Location: Birmingham UK

Jul 2011- Oct 2012

Onsite QA Test Lead

Delta Financial Systems is the market-leading supplier of database administration systems to the self-invested sector of UK pensions industry. Delta has two core products SIPP and SASS that have over 90 installations encompassing a range of leading financial services organizations including life offices, banks, investment managers, consulting actuaries, accountants, national IFAs and specialist pensioner trustee companies

Responsibilities:

- Verifying the quality of the requirements including testability and focused on delivering business value
- Converted user stories into test cases for SASS
- Participated in Sprint ceremonies
- Sprint level test execution and defect analysis and bug metrics
- Providing regular status reports and run the test scripts when and where required
- Identifying unexpected behaviors and performed exploratory testing
- Get feedback from Product owners after each sprint about quality of deliverables

Client: McKesson - CACD – CS Implementation and Maintenance Support

Location: India

Sep 2009 – Jun 2011

Offshore Team Lead

McKesson, Leading healthcare software providers requires maintenance and Support activities for various modules in the same product, based on the end customer's requirement (HAP & Kaiser).

Responsibilities:

- Analyzed the Technical and Functional requirements
- Preparation of Functional Test Cases based upon the requirements
- Execution of Test Cases for System and Regression Testing
- Preparation of Defect report at the end of Testing
- Testing and Tracking for the defects raised during System and Regression Testing and ensuring there is no impact on other Modules
- Peer Review the Deliverables and ensure the quality of the same

Client/Project: Honeywell - SM SAP Support and Maintenance – SAP TAO Automation

Aug 2008 – Sep 2009

Senior Software Engineer

SM SAP Support and Maintenance project provides support for Functional and Technical aspects.

SM SAP TAO is the SAP Business process testing tool, used to build automated test scripts for SAP business processes. SAP TAO acts as an interface between QTP, QC and SAP client in building business components.

Responsibilities:

- Analyze and understand the Business Processes.
- Execute automated scripts using Quick Test Pro connected to Quality Center.
- Build test scripts using functional testing tool Quick test Professional.
- Customization of components depending on the requirements of the Business processes
- Optimization of test scripts using SAP TAO to improve the performance of the created scripts
- Created Data sheet for the execution of automated test scripts.
- Preparation of Defect Report at the end of Testing.
- Execution of Automated test scripts on Development Quality servers..

Client/Project: *McKesson - HCI Portal QA*
Software Engineer

Sep 2006 – Jul 2008

Portal is a dynamic solution that uses advanced, Web-based technologies to unlock data in legacy systems and allows physicians to seamlessly access all patient care information via the Web or an intranet – anytime, anywhere, from any Internet device. Business Process Testing enables Subject Matter Experts (SMEs) to design business process tests early in an application's development cycle, even before the application to be tested is available. Business process tests enable structured testing of an application by combining keyword-driven test automation and automatically generated, easy-to-understand, plain-language test documentation.

Responsibilities:

- Migrating and Modifying the test cases according to TCBP format in Quality Center
- Creation of Test plan from the Requirement and BID document in Test case best practice (TCBP) format
- Regression Testing , Smoke Testing and Sanity Testing
- CR Validation.
- Issue Resolution
- Helped the development team in reproducing the defects found for Horizon Physician Portal 13.0 EDM
- Gap Analysis and Development of Requirement Traceability Matrix for the existing test cases.
- Running of SQL queries using Oracle Raptor and verifying the accuracy of data in application.
- Running of shell scripts in Linux box to populate data in application
- Deployment of Build in the required application server and re-pointing of database
- Execute Manual test cases using Test Mercury Quality Center and collection of test evidences
- Test Case development from Requirement documents.
- Maintain all project related documents / Reports according to ISO standards in Repositories like Microsoft Virtual Source Safe and Document Manager.
- Analyze and understand the Business Processes.
- Created Test Scripts using functional Testing tool QTP 9.0.
- Maintained Configuration Records.
- Tracking defects to closure.
- Customization of components depending on the requirements of the Business processes
- Involved in Manual execution of test scripts.
- Peer Review the Deliverables and ensure the quality o
