kavalibhargav03@gmail.com

SUMMARY

I am a System Engineer with nearly six years of experience in storage, backup, virtualization, and server administration, specializing in NetApp ONTAP, PURE Storage, and Rubrik. I have expertise in storage management, disaster recovery, and data replication, utilizing SnapMirror, SnapVault, and MetroCluster for high availability. My skills include virtualized storage solutions for VMware and Hyper-V, enhancing performance and scalability. I am proficient in Windows and Linux server administration, including Active Directory, Group Policy Management, and Exchange/Office 365 administration. With experience in SAN/NAS integration, deduplication, and compliance enforcement, I develop cost-efficient storage and backup policies. I ensure secure IT infrastructures through firmware updates, patch management, and performance optimization. My ability to automate backup and recovery workflows using Rubrik APIs, PowerShell, and Python streamlines IT operations. As a technical leader, I collaborate with teams, mentor junior engineers, and drive efficiency, security, and business continuity.

TECHNICAL SKILLS

- **NetApp ONTAP (Cluster, SnapMirror, SnapVault, MetroCluster, CIFS, NFS)** – Storage management, data replication, disaster recovery, and file-sharing protocols.
- **PURE Storage (FlashArray, FlashBlade, PURE1 Analytics)** – High-performance storage solutions with analytics for optimization.
- **Rubrik (Backup, SLA Domains, Live Mount, Replication, APIs, Cloud Integration)** – Backup automation, disaster recovery, and cloud storage integration.
- **VMware vSphere & Hyper-V (Storage Integration, VM Performance Optimization)** – Virtualized storage solutions for improved performance.
- **Windows & Linux Servers (System Updates, SAN/NAS Integration, Patch Management)** – Secure OS management with storage connectivity.
- **Storage & Backup Policy Development (Deduplication, Thin Provisioning, Compliance)** – Data security best practices and cost efficiency.
- **Technical Documentation (SOPs, System Configurations, Troubleshooting Procedures)** – Clear documentation for operational continuity.
- **Active Directory & GPO Management:** Skilled in managing Active Directory, creating and enforcing Group Policy Objects (GPOs), and configuring user accounts and permissions for secure network access.
- **Virtualization Storage Solutions:** Expertise in designing and supporting storage solutions for **VMware** and **Hyper-V**, enhancing performance, scalability, and resource utilization.
- **Exchange & Office 365 Administration:** Proficient in managing **Microsoft Exchange** and **Office 365 environments**, including mailbox configurations, load balancing, and ensuring high availability.
- **Server Administration & Performance Optimization:** Experienced in performing server monitoring, troubleshooting, and optimizing performance for both Windows and Linux systems.

EDUCATION

Master's In Management Information Technology

INDIANA WESLEYANA UNIVERSITY

08/2024

EXPERIENCE

System Engineer City of Portsmouth

03/2024 - Till Date PORTSMOUTH, VA

Responsibilities:

- Designed and deployed NetApp ONTAP clusters, including aggregates, volumes, and LUNs, optimizing storage for diverse workloads while ensuring high availability.
- Configured and maintained PURE Storage FlashArray and FlashBlade, integrating them with VMware and Hyper-V to enhance storage efficiency and virtual machine performance.

- Implemented Rubrik backup solutions, establishing SLA domains, replication policies, and integrating with Azure Blob Storage for secure offsite disaster recovery.
- Monitored and optimized storage and backup systems using NetApp OnCommand, Active IQ, and PURE1, proactively resolving performance issues and bottlenecks.
- Developed and enforced storage and backup policies to ensure compliance with data security standards, leveraging deduplication and thin provisioning techniques to minimize costs.
- Performed firmware and software updates on NetApp, PURE Storage, and Rubrik systems, ensuring systems remained secure and up-to-date.
- Configured and managed NetApp SnapMirror and SnapVault for data replication and disaster recovery, reducing data loss during system outages.
- Provided technical leadership in storage infrastructure, collaborating with cross-functional teams to resolve complex issues and support new IT initiatives.
- Automated storage provisioning and backup workflows using Rubrik APIs and scripting tools, streamlining operations and reducing manual intervention.
- Created and maintained detailed documentation for system configurations, troubleshooting procedures, and disaster recovery protocols to ensure operational continuity.
- Led the design and deployment of storage solutions that supported VMware and Hyper-V virtualization environments, improving overall performance and scalability.
- Worked closely with security teams to implement backup encryption and secure cloud integrations, enhancing data protection and compliance with regulatory requirements.

System Administrator

ITVISION360 INC

📅 08/2022-03/2024 📍 PLANO, TX

Responsibilities:

- Configured and managed NetApp MetroCluster for disaster recovery, ensuring high availability and seamless failover during outages.
- Deployed and monitored PURE Storage environments using PURE1 analytics to optimize system health, capacity, and performance.
- Assisted in integrating Rubrik's APIs with automation tools like PowerShell and Python, streamlining backup and recovery workflows.
- Created detailed reports on backup success rates, storage utilization, and performance to guide IT leadership decisions.
- Developed and tested disaster recovery plans using Rubrik Live Mount, enabling quick recovery of virtual machines and databases.
- Collaborated with network engineers to resolve connectivity issues, minimizing downtime for storage and backup systems.
- Implemented Azure Blob Storage lifecycle policies, optimizing data tiering and reducing storage costs.
- Designed storage solutions to support VMware and Hyper-V virtualization environments, improving performance and scalability.
- Managed Active Directory user accounts, group memberships, and permissions to ensure secure access to resources.
- Provided first-line server administration, including server monitoring, troubleshooting, and performance optimization.
- Mentored junior team members, sharing best practices in storage management, backup strategies, and cloud integrations.

IT System's Support Engineer

ORION CORPORATE ALLIANCE

📅 09/2019 - 06/2022 📍 HYDERABAD, INDIA

Responsibilities:

- Installed and managed Active Directory, creating Group Policy Objects (GPOs) based on requirements and organizing them within Organizational Units (OUs).
- Developed and utilized PowerShell scripts to automate migration processes and administrative tasks.
- Maintained the organization of Active Directory users, including provisioning and deprovisioning accounts synchronized with Exchange.

- Managed Active Directory accounts, including user creation, password resets, and Group Policy enforcement.
- Managed and supported Active Directory (AD), GPOs, domain users, user groups, and assigned appropriate permissions for LAN and domain access.
- Administered Microsoft Office 365, handling email configurations, license management, and troubleshooting.
- Configured and maintained Outlook Anywhere, performing database maintenance and troubleshooting mail flow issues.
- Established and maintained user accounts, group policies, and resolved issues related to GPO configurations.
- Designed and implemented Database Availability Groups (DAG) for high availability of mailbox databases in a cross-site configuration.
- Tested and verified load-balanced configurations to ensure high availability and reliability of mailbox databases.
- Ensured user accessibility to Outlook, OWA, and Outlook Anywhere, troubleshooting and resolving service-related issues.
- Designed, implemented, and supported enterprise solutions for security and infrastructure management.
- Configured ISA Server for secure web publishing and controlled access to network resources.
- Provided on-site and remote desktop support to employees across multiple locations.
- Configured and deployed workstations, including software installations, security updates, and asset tracking.
