SUMMARY

Experienced .NET Full-Stack Engineer with 10 years of expertise in building scalable, high-performance web and desktop applications. Proficient in modern .NET technologies including **C#, .NET Core, ASP.NET** (MVC, Web API, Web Forms, Razor Pages, Blazor), and advanced **JavaScript** frameworks such as **Angular**, and **Node.js**. Strong experience in cloud platforms like **Microsoft Azure** and **AWS** for deploying and managing cloud-native applications. Adept in utilizing **Kafka, RabbitMQ, GraphQL**, and **Entity Framework** for building robust back-end systems. Demonstrated leadership in guiding development teams, mentoring junior developers, and delivering high-quality software solutions. Expertise in **CI/CD pipelines, Docker, Kubernetes**, and implementing best practices in software development.

TECHNICAL SKILLS

- **Languages:** C#, JavaScript, TypeScript, SQL, jQuery, Java, HTML
- **Tools & Technologies:** Visual Studio, SQL Server, SQL Profiler, CosmosDB (NoSQL), PostgreSQL, DBeaver, VS Code, Postman, Azure Portal, Azure Application Insights, Azure DevOps, Git, TFS, SVN, IIS
- **Frameworks:** .NET 5/6/7/8, ASP.NET Core, ASP.NET, MVC, Angular 16

EDUCATION

Bachelor's Degree in **Computer Science**
Stanford University • Stanford, CA • Sep 2011 - Jun 2015

PROFESSIONAL EXPERIENCE

Senior .NET Software Engineer

PartnerLinQ | Cranbury, NJ | September 2023 – Present

Worked on **PartnerLinQ**, which is a web-based application that seamlessly connects **multi-tier supply chain networks, marketplaces, and core systems worldwide** to deliver unified connectivity.

- The classic **PartnerLinQ** was developed using **ASP .Net MVC, NoSQL database**, and **MS Azure infrastructure** and supported a single tenant with one deployment.
 - **Took the initiative, led a team** of software engineers, and transformed it into a new multi-tenant application that was based on **angular v12** (later on moved to **angular v16**) and **.Net8**.
 - Additional **Azure functions** were incorporated to introduce new features, including sending email notifications based on application insights logs retrieved from Azure Application Insights or migrating artifacts/data across environments with one click. Concurrently, existing functions underwent modifications aimed at improving their performance.
 - **Good coding practices** were followed to write clean, reusable, and efficient code. To maintain the principles, pre-commit checks were also added. **CI/CD pipelines** were introduced on the DevOps branches for automated deployments on each level of delivery
-

- **Engaged** with **clients** to gather requirements and deliver tailored, optimal solutions.
- Worked on developing a cloud-native web application in **Angular v16** and **.Net 5**.
- Managed databases on **SQL** and **NoSQL (Cosmo DB)**.
- Worked on a cloud-based environment, using **Azure**.
- Modified already made applications according to the customer needs.
- Developed **WCF services**, **Azure functions**, and **Azure web jobs**.
- Delegated tasks and monitored team performance as **a team lead**.
- Planned sprints and managed deployments at the end of every sprint.

.NET Software Developer

Netsol Technologies Inc. | Encino, CA | April 2017 – August 2023

- Developed **Wholesale Financial System** using **angular v8 (later upgraded to v14)** and the backend using **RestAPIs** based on **.Net Core**. Good coding practices were followed to maintain reusability, and consistency on both the front and the back ends of the application.
 - Revamped **Contract Management System (CMS)** by addressing bugs and offering prompt solutions whenever necessary. This included actively **engaging with the team**, **troubleshooting issues**, and **ensuring a smooth transition**. **Took initiative** on the responsibility of thoroughly analyzing and resolving system glitches, ensuring uninterrupted workflow during the ongoing transformation. Additionally, **provided essential support** in maintaining system stability and performance, contributing to the successful progression of the project.
-

- Worked on developing UI layers using **angular v14**.
- Worked on developing the business logic layer using **.Net Core**.
- Used to modify existing and develop new **WCF** services according to the business need.
- Worked on developing the **database** layer using **SQL Server 2016**.
- Used to work on **bug resolution** in applications developed using **WPF** and **.Net WebForms**.
- Used to publish and deploy applications on **IIS** for testing purposes.

Software Developer

Cinch Auto Finance | Alpharetta, GA | September 2015 – March 2017

- Developed **NLS (Northridge loan system)** from scratch using **angular v2** and **.Net APIs**. Wrote clean and reusable code. All the calculations were performed according to the customer-provided formulas inside the database layer within the stored procedures. The database was maintained in an SQL server. TFS was used for version control. However, it was manual but regular deployments were done on IIS on an in-house server.
-

- Worked on developing attractive and professional UI layers using **Angular v2**.
- Worked on developing the business logic layer.
- Worked on developing the database layer using **SQL Server 2014**.
- Used to find efficient solutions for the problems assigned by the Team Lead.
- Usually used to publish and deploy the applications on IIS.
