

BRIAN WANG

Senior Software Engineer, Project Manager, Tech Lead, Solution Architect

(Email: pro.d.wang@gmail.com) Phone: 415 851 2632

SUMMARY

Brian is a creative software developer who builds dynamic, high-speed, high-quality mobile apps, websites, and web applications. Brian has been trusted to build complex logic and intuitive UI using modern tech stacks. He is experienced with all stages of the development cycle for software engineering and is well-versed in numerous programming languages and frameworks. He focuses on creating code that is easy to read, maintain, and test to optimize the developers' experience and the apps.

EDUCATION

The State University of New York

2003 - 2007

Bachelor's degree, Computer Science

WORK EXPERIENCE

Senior Full-Stack Engineer

Nov 2022 - Mar 2025

@ THEIA

- Developed robust, scalable web applications using React, Node.js, and TypeScript
- Designed and implemented mobile-friendly UI approach and SSR using Next.js app router.
- Implemented session handler, state management, and efficient API endpoints using Node.js and MongoDB.
- Collaborated with Project Manager and Back-End developers.

NFT | React | React Native Developer

Apr 2021 - Oct 2022

@ GM Labs, Inc

- Engineered a seamless wallet integration features, allowing users to connect various cryptocurrency wallets (e.g., MetaMask, Coinbase Wallet) for easy transactions on the platform.
- Employed React and Web3.js for frontend development, facilitating real-time blockchain data interaction.
- Led the creating of a cross-platform mobile application using React Native, enabling users to browse purchase, and manage NFTs from their smartphones.
- Focused on optimizing performance and user experience, making the app accessible on the mobile devices.

- Utilized insights to make user driven enhancements to the interface and functionality, significantly increasing user satisfaction and engagement.

React | TypeScript | Tailwind Developer

@ ReMatter - Contract

Dec 2020 - Mar 2021

- Developed web application interface, utilizing React and Tailwind CSS to enhance usability and accessibility.
- Implemented a mobile-first design approach, resulting in a 40% increase in mobile user engagement.
- Developed a reusable component library using React and Tailwind CSS, standardized across all ReMatter projects to ensure UI consistency and accelerate the development cycle.

React Developer

@ HEIR

Aug 2019 - Nov 2020

- Conducted comprehensive performance optimizations, leveraging React's lazy loading and memorization techniques.
- Worked closely with the UX/UI design team to translate designs into functional user interfaces, ensuring fidelity to design specifications and user experience goals.
- Facilitated regular feedback sessions to iterate on designs based on user testing and analytics.
- Actively participated in Agile development processes, including sprint planning, daily standups, and retrospectives.
- Implemented continuous integration/continuous deployment (CI/CD) pipelines using GitHub Actions, improving deployment frequency and reducing manual errors.

Full Stack Developer

@ ZORA

Jun 2016 - Jul 2019

- Led the full-stack development of ZORA's flagship e-commerce platform, integrating advanced features such as real-time inventory management, personalized user recommendations, and secure payment processing.
- Utilized React for the frontend to create a dynamic, intuitive user interface, and Node.js with Express on the backend for efficient API development and database management.
- Architected and implemented a scalable microservices architecture, significantly improving the platform's reliability and scalability.
- Implemented database indexing and caching strategies to further enhance performance and support high-volume traffic.
- Developed RESTful APIs for internal and external use, ensuring secure and efficient data exchange between the platform and various services.
- Configured and maintained CI/CD pipelines using Jenkins, facilitating automated testing and deployment processes.

- Employed advanced CSS techniques and frameworks, including Tailwind CSS to ensure the platform's responsive design.
- Actively participated in Agile development cycles, sprint planning, and retrospectives to continuously refine and improve development processes.
- Provided mentorship to junior developers, offering guidance on best practices in full-stack development, code review, and project management.

Mobile Application Developer

@ Dim Dim Sum

Nov 2010 - Mar 2015

- Developed mobile applications for IOS and Android using swift and Java.

Full Stack Developer

@ Dole Food Company

Jun 2007 - Oct 2010

- Architected and implemented a scalable microservices architecture, significantly improving the platform's reliability and scalability.
- Implemented database indexing and caching strategies to further enhance performance and support high-volume traffic.
- Developed RESTfull APIs for internal and external use, ensuring secure and efficient data exchange between the platform and various services.
- Configured and maintained CI/CD pipelines using Jenkins, facilitating automated testing and deployment processes.
- Employed advanced CSS techniques and frameworks, including Tailwind CSS to ensure the platform's responsive design.
- Actively participated in Agile development cycles, sprint planning, and retrospectives to continuously refine and improve development processes.

VOLUNTEERING

Food Service Worker

Walmart

Dec 2009 - May 2010 · 5 months

Food Service

SKILLS

Programming languages

Ruby on Rails, Python, C#, JavaScript, TypeScript, C, C++, HTML, CSS

Backend

Node, Nest.js, Django, Flask, FastAPI, SQLAlchemy, .NET Framework, REST, GraphQL, TypeORM, RabbitMQ, Redis, Asyncio, Docker, Kubernetes, Websockets, OAuth2

Frontend

React.js, Next.js, Redux, Vue.js, Nuxt.js, Angular, RxJS, Tailwind CSS, D3.js, Chart.js, HTML5, CSS, Bootstrap, jQuery, Plotly, Flutter, React Native, Ionic Framework

Database

PostgreSQL, MySQL, MariaDB, SQLite, MSSQL, Oracle, DynamoDB, MongoDB, Redis

Testing

Test Driven Development, Behavior Driven Development, E2E, Unit Testing, Integration Testing, Performance Testing, pytest, unittest, nose2, RSpec, Capybara, NUnit, xUnit, MS Test, Mocha, Jest, Chai, Enzyme, Cypress, Protractor

Cloud Computing Services

AWS (S3, SNS, SQS, Lambda, ECS, ECR, AppSync, Cognito, DynamoDB, RDS, CloudWatch, Code Pipeline, BeanStalk, CloudFront, API Gateway, Rekognition, Pinpoint), GCP (AppEngine, Cloud Functions, Datastore, BigQuery, Pub/Sub), Azure (Active Directory, Functions, Logic Apps, Kubernetes, VMs, App Service, Data Lake Storage, Key Vault), Heroku

BI & Data Engineering

Python, Numpy, Pandas, MapReduce, Hadoop, Hive, Spark, AWS SnowFlake, Sisense, Power BI, Tableau, Google BigQuery, Batch processing

AI & ML

TensorFlow, PyTorch, scikit-learn, Keras, OpenCV, spaCy, XGBoost.

Crypto & Blockchain

Solidity, Rust, Ethers.js, Web3.js, Web3React, Truffle, Dapp.js, Embark

TYPICAL PROJECTS

TokenTable

<https://www.tokenable.xyz>

TokenTable is a token management platform for Web3 founders and token holders. TokenTable is a token ownership management platform that helps founders execute, track, and enforce the project's agreements to distribute their tokens. The product serves all token holders —stakeholders in token-based projects— including founders, investors, employees, advisors, and community contributors.

(React, Next.js, Ethers.js, Web3React, Arweave, Apyse (PDFTron), Tailwind CSS, Vercel, Nest.js, PlanetScale, Amazon S3 Buckets, Cloudinary, Redis, AWS CDK, TypeORM, GraphQL)

EthSign Signatures

<https://www.ethsign.xyz>

EthSign is a Web3 chain-agnostic secure document signing protocol anchored on Arweave. Built on Arweave, EthSign Next is our central pivot into the world outside EVM-compatible blockchains. It allows users from different blockchain systems and anyone with a cryptographic keypair to digitally sign, encrypt, and permanently store documents and independently verify their validity.

(React, Next.js, Ethers.js, Web3React, Arweave, Apyse (PDFTron), Tailwind CSS, Vercel, Nest.js, PlanetScale, Amazon S3 Buckets, Cloudinary, Redis, AWS CDK, TypeORM, GraphQL)

Prompti

<https://www.prompti.com>

Prompti is a one-of-a-kind online marketplace where sponsors and talented individuals can negotiate and contract working relationships, where sponsors financially support prospects in exchange for participation in future income. Prompti is the power of potential, the power of partnership, the power of people, the power of promotion, and the power of profitability.

(React, Next.js, Tailwind CSS, Vercel, Node.js, Express.js, REST APIs, Amazon S3 Buckets, Sequelize ORM, AWS EC2, MongoDB, API Gateway)

PhotoMath

<https://photomath.com/en>

<https://apps.apple.com/us/app/photomath/id919087726>

<https://play.google.com/store/apps/details?id=com.microblink.photomath>

Photomath was created by a dad looking for a way to help his kids with their math homework. People often found it challenging to explain math concepts in an easy, approachable way, so his struggles sparked the idea for Photomath.

As a React Native developer, I played a crucial role in the project's success. I led the upgrade from React Native version 0.53 to 0.66, seamlessly navigating multiple breaking changes and library updates. I also enhanced the app by introducing parent and teacher push notifications, significantly improving iOS and Android performance through async actions and state management mechanisms.

(React Native, TypeScript, SASS/CSS3, GraphQL, Styled-Components, Redux, Redux-Thunk, OCR, React Native Camera, React Navigation)

Proximity Learning

<https://www.proxlearn.com>

<https://proxlearn.pliconnect.com>

Proximity Learning is an education services company that provides virtual teaching solutions for K-12 schools and districts. They offer remote teaching services with certified teachers in various subjects to enhance the educational experience for students, especially in situations where in-person teaching may not be feasible or optimal.

As a Ruby on Rails developer, I spearheaded the development of V2 using the robust Ruby on Rails v6 in conjunction with Tailwind CSS. My responsibilities included crafting RESTful APIs and implementing role-based permission logic, both on the backend and frontend. I undertook a comprehensive optimization of the project's database structure and architecture, resulting in substantial improvements in app performance. Additionally, I efficiently managed all aspects of database migrations and model definitions, adhering to best practices and programming principles inherent to ActiveRecord.

(Ruby on Rails, Tailwind CSS, PostgreSQL, AWS S3, AWS EC2, Turbo Hotwire, Zendesk, Zoom API, Google Suits API, Docker, Kubernetes, Paychecks, JavaScript, CSS3)
