

Professional Summary

Senior Full Stack Engineer with 13+ years of experience, specializing in building scalable, secure, and high-performance systems using Node.js, TypeScript, Java, Python, go and rust and React.js and angular. Adept at designing and implementing event-driven architectures, microservices, and high-performance APIs that scale in real-time environments.

Node.js Expertise

- **Asynchronous Programming:** Mastery of Node.js event-driven architecture, leveraging the event loop, callbacks, promises, and async/await for non-blocking operations, ensuring optimized performance in I/O-heavy environments.
- **Concurrency & Multithreading:** Extensive experience with worker threads, cluster module, and child processes for building multi-threaded, high-concurrency applications without blocking the event loop.
- **API Development:** Specialized in building RESTful APIs with Express.js and Fastify, and GraphQL APIs using Apollo Server with TypeScript to ensure full-stack type safety, robust schema design, and advanced querying capabilities.
- **Microservices:** Designed distributed, decoupled microservices using Node.js for backend logic, AWS Lambda for serverless compute, Docker, and Kubernetes for containerization and orchestration, ensuring seamless scalability and reliability in production environments.
- **Performance Optimization:** Implemented caching strategies using Redis and Node-cache, message queues like AWS SQS, RabbitMQ, Kafka, and stream processing techniques (e.g., Redis Streams, Node Streams) to handle large volumes of concurrent requests while maintaining low latency and high throughput.
- **Security:** Proficient in securing Node.js applications by integrating OAuth2, JWT, API Gateways, and rate-limiting to prevent unauthorized access. Ensured adherence to OWASP security standards to prevent XSS, CSRF, and other vulnerabilities.
- **Event-Driven Systems:** Expertise in building event-driven architectures using Node.js, Kafka, RabbitMQ, and Redis Pub/Sub to manage complex event flows, ensuring systems can scale and handle high event volumes efficiently.
- **Authentication & Authorization:** Developed secure user authentication systems using AWS Cognito, JWT tokens, OAuth2, and SAML/OIDC Federation, enabling fine-grained control over user permissions and access across multi-tenant systems.
- **Real-Time Systems:** Implemented WebSockets with libraries like Socket.io and WebSockets API to create real-time communication platforms, such as chat applications, live data feeds, and real-time notifications.
- **Testing & Quality Assurance:** Built robust unit, integration, and end-to-end testing strategies using Jest, Mocha, Chai, Supertest, and Cypress, ensuring continuous delivery with high test coverage. Integrated contract testing using Pact for cross-service compatibility.
- **CI/CD & DevOps:** Experienced in automating CI/CD pipelines with GitHub Actions, Jenkins, and CircleCI for building, testing, and deploying Node.js applications. Integrated Docker containers and Kubernetes for consistent environments, and leveraged Terraform for Infrastructure as Code (IaC).

Java Expertise

- **Core Java & Standard Editions:** Extensive experience working with Java SE, including key concepts like multithreading, collections, exception handling, IO operations, and JVM tuning. Strong grasp of Java Reflection API, enabling dynamic method invocations, class inspection, and runtime manipulation of objects.
- **Spring Framework:** Proficient in using the Spring ecosystem, including Spring Boot for building enterprise-grade microservices and web applications. Expertise in dependency injection (DI), aspect-oriented programming (AOP), transaction management, and Spring Security for building secure, scalable applications.

- **Kafka Integration:** Experienced in integrating Apache Kafka for building highly scalable, fault-tolerant, real-time data streaming solutions. Familiar with Kafka producers, consumers, topics, partitions, and managing Kafka brokers for high-performance data pipelines.
- **XSLT Transformations & XML Parsing:** Skilled in working with XSLT transformations to convert XML documents into different formats. Proficient in XML parsers such as DOM, SAX, and StAX to read, write, and manipulate XML data efficiently in Java applications.
- **Hibernate & JPA:** Expertise in Hibernate and JPA (Java Persistence API) for object-relational mapping (ORM). Proficient in entity mapping, lazy/eager fetching, JPQL (Java Persistence Query Language), and optimizing queries for performance. Hands-on experience in configuring Hibernate caching mechanisms and integrating with SQL databases (MySQL, PostgreSQL, Oracle).
- **Database Connectivity:** Strong experience in database connectivity using JDBC for performing efficient database operations, including transactions, connection pooling, and prepared statements. Familiar with database schema design and data modeling in both relational databases (RDBMS) and graph databases like Neo4j.
- **Neo4j:** Hands-on experience in building applications with Neo4j, leveraging its graph database capabilities for modeling complex relationships and optimizing graph-based queries. Proficient in creating and querying Cypher queries for efficient graph traversal and analysis.
- **UI Development with Swing & JavaFX:** Extensive experience developing desktop applications using Swing and JavaFX, designing GUI applications with event-driven programming. Skilled in using FXML for UI layout and integrating Scene Builder for efficient development.
- **Play Framework:** Experience with the Play Framework for building reactive, scalable web applications in Java. Proficient in leveraging Akka for building asynchronous, non-blocking applications and using Scala with Java to develop high-performance, distributed systems.

Python Expertise

- **Python Development:** Extensive experience in backend development with Python using frameworks such as Flask, Django, and FastAPI. Built RESTful APIs and microservices, integrating Python-based data processing with frontend technologies.
- **Data Science & AI:** Expertise in data analysis, machine learning, and AI using Python's rich ecosystem of libraries, including Pandas, NumPy, Matplotlib, Scikit-learn, and TensorFlow. Developed predictive models, classification systems, and NLP-based solutions for real-time applications.
- **Automation & Scripting:** Skilled in writing Python scripts for automating workflows, data transformations, ETL pipelines, and cloud resource management, leveraging tools like Celery for task queues and Boto3 for AWS services integration.
- **Testing & Quality Assurance:** Proficient in writing unit tests and integration tests for Python applications using pytest and unittest, ensuring high-quality and reliable software. Implemented test automation using Selenium for web applications and pytest for API testing.
- **Cloud Integration:** Integrated Python applications with AWS Lambda, Google Cloud Functions, and Azure Functions to develop scalable, serverless architectures. Utilized Boto3 (AWS SDK for Python) for managing cloud resources and data storage solutions (e.g., S3, DynamoDB, RDS).
- **Containerization & Orchestration:** Experience in containerizing Python applications using Docker and deploying them on AWS ECS, Google Cloud Run, and Kubernetes for high scalability and orchestration.
- **Python, Robot Framework & Selenium:** Experienced in using Python for automation scripting, with proficiency in Robot Framework for automated testing and Selenium for browser automation. Developed end-to-end test suites for web applications, ensuring robust, cross-browser compatibility and continuous integration with CI/CD pipelines.

React Development

- Led the development of React.js applications, implementing component-based architectures, state management using Redux and Context API, and server-side rendering (SSR) using Next.js to improve SEO and performance in production environments.
- Integrated React with backend APIs and microservices, ensuring real-time data synchronization and seamless user experience, utilizing WebSockets, GraphQL, and REST APIs.
- Tailwind CSS: Rapidly design responsive UIs with utility-first classes, custom configurations, and minimalistic CSS footprint. Integrate Tailwind with React and Next.js for efficient and performant styling with a responsive grid system and built-in customization for your project needs.
- Next.js: Build high-performance, SEO-optimized React applications using Next.js. Utilize server-side rendering (SSR), static site generation (SSG), and API routes to enhance scalability and performance. Take advantage of image optimization, routing, and pre-rendering for faster page loads and better user experience.
- Gatsby Framework & React CMS: Proficient in using Gatsby, a React-based static site generator, for building high-performance websites and content management systems (CMS). Experienced in integrating headless CMS solutions like Contentful and Strapi with Gatsby to create dynamic, SEO-friendly websites with fast load times and easy content management.

Angular Development

- Built Angular applications using RxJS, NgRx, and Angular Material for scalable, modular, and maintainable frontend architectures, with focus on building responsive UIs and implementing lazy loading for optimized performance.
- Enhanced user experiences by integrating Angular with RESTful APIs and GraphQL endpoints, utilizing Reactive Forms and services to handle complex business logic and data management seamlessly.

Cloud & Infrastructure (AWS, Azure, GCP)

- Cloud-Native Development: Expert in designing cloud-native applications and serverless solutions using AWS (Lambda, API Gateway, DynamoDB, Cognito), GCP (Cloud Functions, Pub/Sub), and Azure (Azure Functions, App Services, AKS). Skilled in multi-cloud architectures for high availability, cost efficiency, and optimal performance.
- Infrastructure as Code (IaC): Proficient in provisioning infrastructure using AWS CDK, Azure Resource Manager (ARM) templates, Terraform, and Google Cloud Deployment Manager to automate the setup of cloud resources.
- Identity and Access Management (IAM): Configured secure access to cloud services using IAM in AWS, Azure Active Directory (AAD), and Google Cloud IAM, applying RBAC, OAuth2, and MFA for secure user access management.
- CI/CD Automation for Multi-Cloud: Integrated GitHub Actions, Azure DevOps, and Google Cloud Build for automating build, test, and deployment pipelines across AWS, Azure, and GCP environments.
- Cloud Storage & Databases: Expertise in managing cloud storage solutions like AWS S3, Azure Blob Storage, and Google Cloud Storage for large-scale file storage, along with relational databases such as AWS RDS, Azure SQL Database, and Google Cloud SQL.
- Monitoring & Observability: Implemented monitoring and logging solutions using CloudWatch (AWS), Azure Monitor, and Google Cloud Operations Suite (formerly Stackdriver) for end-to-end observability and real-time system health tracking.
- Multi-Cloud Integration: Proven experience in architecting multi-cloud applications that leverage services across AWS, Azure, and GCP to ensure flexibility, resilience, and fault-tolerance across cloud platforms.

Web3 Development

- Proficient in developing decentralized applications (dApps) and smart contracts using Solidity and Web3.js for Ethereum and Polygon blockchain platforms. Experienced with DeFi protocols, NFTs, and integrating blockchain technology with React and Node.js for interactive user interfaces and real-time blockchain interactions.

AI & Machine Learning

- Extensive experience applying supervised, unsupervised, and deep learning techniques for predictive analytics, computer vision, and NLP using TensorFlow, PyTorch, and scikit-learn. Built machine learning models for real-time applications such as recommendation systems and time series forecasting. Expertise in integrating AI models into production environments for real-time data analysis and prediction.

Project Management & Methodologies

- Experienced in Agile (Scrum) methodologies, managing cross-functional teams to deliver high-quality products within deadlines. Adept in stakeholder communication, risk management, and ensuring projects are completed on time using CI/CD pipelines. Skilled in using tools like JIRA, Confluence, and Trello to facilitate sprint planning, task management, and collaboration. Led teams to execute multi-phase projects in fast-paced environments.

Data Structures & Algorithms

- Solid understanding of core data structures (arrays, linked lists, stacks, queues, trees, graphs) and algorithms (sorting, searching, dynamic programming, greedy algorithms, divide and conquer) for solving complex computational problems. Proficient in Big O notation and time complexity analysis to optimize algorithm performance. Experience in implementing graph traversal, pathfinding algorithms, and recursion for real-world applications.

Architecture Expertise

- Enterprise Architecture: Extensive experience in designing enterprise architectures that are scalable, secure, and maintainable. Expertise in implementing microservices architectures, enabling modular, loosely-coupled systems with independent deployment cycles. Skilled in service discovery, API gateways, and event-driven design to ensure seamless communication and orchestration across distributed systems. Proficient in domain-driven design (DDD) for structuring complex applications and ensuring alignment with business goals.
- Web Architecture: Expertise in building highly-scalable web architectures using React.js, Next.js, and Vue.js for dynamic and responsive web applications. Experience in integrating front-end frameworks with backend services through RESTful APIs and GraphQL to provide seamless, interactive user experiences. Proficient in utilizing server-side rendering (SSR) and static site generation (SSG) for enhanced performance and SEO optimization.
- Service-Oriented Architecture (SOA): Strong background in implementing service-oriented architectures (SOA) using REST and GraphQL for efficient communication between backend services. Expertise in microservices architecture, deploying services in containers with Docker and orchestrating them with Kubernetes for scalability, high availability, and fault tolerance. Skilled in API-first design and managing service dependencies using API gateways.
- UI Architecture: Skilled in designing component-based UI architectures using React.js and Angular. Proficient in state management using Redux, NgRx, and Vuex, ensuring smooth data flow and maintaining the UI state in large-scale applications. Experience with modular UI development and integrating headless CMS for dynamic content management. Focus on design patterns such as MVVM and MVC to ensure maintainable, testable, and reusable code.
- Cloud-Native & Distributed Systems Architecture: Expertise in designing cloud-native architectures on platforms like AWS, Azure, and GCP, utilizing serverless technologies, message queues (Kafka, RabbitMQ), and distributed databases (NoSQL and relational). Proficient in event-driven architectures using Kafka and AWS Lambda to process events asynchronously, enabling scalable and resilient systems.
- Peer-to-Peer (P2P) Application Development: Experienced in designing and developing peer-to-peer (P2P) applications using distributed systems and decentralized technologies. Proficient in building P2P networks for real-time data exchange, file sharing, and distributed computing. Expertise in leveraging WebRTC for direct browser-to-browser communication, creating decentralized applications (dApps) using blockchain technologies like Ethereum for trustless transactions, and building scalable, fault-tolerant networks with gRPC and P2P protocols (e.g., IPFS, Libp2p). Ensured robust peer discovery, security, and data integrity through encryption and cryptographic protocols.

Additional Programming Languages

- Ruby: Minimal experience with Ruby on Rails, primarily used for simple scripts and small web tasks when required.
- Perl: Limited exposure, used for automation scripts and text processing on an as-needed basis.
- Scala: Basic knowledge, applied in small functional programming tasks and data processing when necessary.
- C: Some experience with system-level scripts and performance optimizations for low-level programming.
- C++: Basic experience, used for small, performance-critical applications on-demand.

Domain Expertise

Online Ordering System & E-Commerce

I have extensive experience in building scalable and robust online ordering systems and e-commerce platforms. By leveraging technologies like Node.js, React.js, and Next.js, I have developed user-friendly interfaces, integrated payment gateways, and built systems capable of handling large-scale product catalogs, user data, and real-time inventory management. My focus has been on creating seamless, secure, and high-performance systems that drive conversions, improve customer experience, and provide real-time tracking of orders and shipments.

Recent Clients Worked – Walmart, Walgreens, Macys

Health Care

In the healthcare domain, I have worked with healthcare data standards like HL7 and FHIR to build applications that enable seamless data exchange between different healthcare systems. I have designed and developed healthcare platforms that facilitate patient data management, scheduling, and billing while ensuring compliance with regulations like HIPAA. My work includes cloud-based systems, secure communication channels, and real-time updates for healthcare providers, ensuring streamlined operations and enhanced patient outcomes.

Recent Clients worked- Kaiser Permanente, Mednax

Master Data Management (MDM)

I have hands-on experience implementing Master Data Management (MDM) solutions that ensure accurate, consistent, and up-to-date information across the enterprise. By designing and deploying centralized data systems, I have enabled organizations to maintain a single source of truth for key business data. I have worked with ETL processes, data governance frameworks, and data integration tools, driving data quality and consistency for business analytics and decision-making processes.

Recent Clients Worked - Cisco

Insurance

In the insurance sector, I have developed applications for policy management, claims processing, and customer service. I've worked with API-driven architectures to integrate third-party services for premium calculations, risk assessment, and fraud detection. My solutions have helped insurance companies streamline their operations, reduce manual errors, and provide better customer service, while maintaining strict compliance with industry regulations.

Recent Clients worked – Benefit focus

FinTech

In the FinTech domain, I have designed and developed financial applications for payments, investment management, and transaction processing. My expertise includes working with blockchain technologies for secure transactions, real-time trading platforms, and portfolio management tools. I have implemented secure authentication, cryptography, and data encryption mechanisms to ensure the safety of user financial data and transactions.

Recent Clients Worked – Apiture, Valuelabs

Investment Banking

In the investment banking domain, I have worked on capital market platforms, including trade execution, market data aggregation, and portfolio management systems. I have extensive experience with real-time data processing, market feeds, and analytics tools to support trade settlement, asset management, and financial analysis. By utilizing cloud platforms and big data processing technologies, I have helped investment banks scale their infrastructure to handle massive volumes of transactional data and ensure timely and accurate trade execution.

Recent Clients Worked - Apiture

Skill Set

Languages	- JavaScript (ES6+), TypeScript (strict typing, generics, decorators, advanced types) - Node.js (async/await, event loop, clustering, worker threads) - Shell Scripting (Bash, Zsh) - Java (JVM, Spring Boot, RESTful services) - Python (Flask, Django, FastAPI, Pandas, NumPy, Asyncio) - Go (Goroutines, Channels, Concurrency) - Rust (Memory Management, Ownership, Concurrency)
Frameworks & Libraries	- Node.js: Express.js, Fastify, NestJS, Koa, Apollo Server, Prisma, Mongoose - Java: Spring Boot, JAX-RS, Spring Security - Python: Flask, Django, FastAPI, Celery - Go: Gin, Echo, gRPC - Rust: Actix, Rocket, Tide, Tokio
Frontend Frameworks & Libraries	- React.js (Component-based architecture, React Hooks, Context API, Redux, JSX, React Router) - Angular (RxJS, NgRx, Angular Material, Lazy Loading) - Vue.js (Vuex, Vue Router, Composition API) - Next.js (Server-side rendering, Static site generation) - Svelte (Reactive UI, Stores, Compile-time optimization)
API Development	- RESTful APIs, GraphQL (Apollo Server) - gRPC, OpenAPI/Swagger, WebSockets, Server-Sent Events - Java: JAX-RS, Spring REST - Python: Flask, FastAPI (async API handling) - Go: gRPC, REST API creation with Gin/Echo - Rust: Rocket, Actix-web
Event-Driven Systems	- Kafka, RabbitMQ, Redis Pub/Sub - Node.js Streams (Node Streams, Redis Streams) - Java: Kafka, JMS - Python: Celery, Redis Pub/Sub - Go: Kafka, NATS - Rust: Kafka, Redis Streams
Cloud & Infrastructure	AWS: Lambda, API Gateway, Cognito, SQS, SNS, SES, DynamoDB, CloudFormation, CDK, CloudWatch, X-Ray, S3, IAM, RDS Azure: Azure Functions, App Services, AKS, Azure SQL Database, Blob Storage, Azure DevOps GCP: Cloud Functions, Pub/Sub, Cloud Run, Cloud SQL, IAM, Google Cloud Monitoring - Java: AWS SDK, Spring Cloud, Azure SDK - Python: Boto3 (AWS SDK), Azure SDK, Google Cloud SDK - Go: AWS SDK, GCP SDK

Containerization & Orchestration	- Docker, Kubernetes (EKS, GKE, AKS) - Java: Dockerize Spring Boot apps, Kubernetes - Python: Docker containers for Flask/Django, Kubernetes integration - Go: Docker, Kubernetes-native applications - Rust: Docker, Kubernetes with Rust apps
Authentication & Security	- OAuth2, JWT, Passport.js, AWS Cognito, Auth0, SAML/OIDC Federation, RBAC - Java: Spring Security, JWT - Python: OAuth2, JWT (Django Rest Framework, Flask-JWT) - Go: OAuth2, JWT (golang-jwt) - Rust: Actix-web, JWT
CI/CD & DevOps	- GitHub Actions, Jenkins, CircleCI, Azure DevOps - Docker, Kubernetes for containerized environments - Terraform for Infrastructure as Code (IaC) - AWS CDK, Azure Resource Manager (ARM), GCP Deployment Manager - Java: Maven, Gradle, Jenkins - Python: GitLab CI, CircleCI for Python projects - Go: GoCD, Jenkins pipelines - Rust: Cargo, GitLab CI
Databases & Storage	- MongoDB (Mongoose), PostgreSQL (Prisma), MySQL, DynamoDB, SQLite - AWS RDS, DynamoDB, Google Cloud SQL, Azure SQL Database - Redis, Redis Streams, Node-cache - Java: Hibernate, Spring Data JPA, JDBC - Python: SQLAlchemy, Django ORM - Go: GORM, SQLx - Rust: Diesel, SQLx
Testing & Automation	- Unit Testing: Jest, Mocha, Chai, Jasmine - API Testing: Supertest, Postman - E2E Testing: Cypress, Playwright, Selenium (TypeScript bindings) - Contract Testing: Pact - Performance Testing: Artillery, Apache JMeter - Coverage & Static Analysis: Istanbul (nyc), SonarQube, ESLint - Java: JUnit, Mockito, Selenium - Python: PyTest, Selenium, unittest - Go: Go testing framework (Testify) - Rust: Rust test framework, Criterion.rs
Monitoring & Observability	- AWS CloudWatch, X-Ray, Datadog, OpenTelemetry - Azure Monitor, Application Insights - Google Cloud Operations Suite (formerly Stackdriver) - Java: Spring Boot Actuator, Prometheus - Python: Prometheus client, Celery monitoring - Go: Prometheus, OpenCensus - Rust: Prometheus client, OpenTelemetry
Version Control & Code Quality	- Git, GitHub, GitLab - Code Formatting & Linting: Prettier, ESLint, TSLint - Static Code Analysis: SonarQube, Code Climate - Java: Git, Maven, SonarQube - Python: Git, PyLint, Flake8 - Go: Git, GoLint, GoFmt - Rust: Git, Clippy, Rustfmt

Professional Experience

Full Stacks Architect - Developer | Team Tranquil Inc.

Nov 2021 – Present

- Designed and built serverless applications using AWS Lambda, API Gateway, and DynamoDB with Node.js and TypeScript to ensure scalability and high availability for microservices.
- Integrated AWS Cognito for multi-tenant authentication and implemented fine-grained role-based access control (RBAC) using IAM policies.
- Built and maintained GraphQL APIs using Apollo Server and TypeScript, enabling efficient data querying and better performance for frontend applications.
- Architected and implemented event-driven architectures using AWS SQS, SNS, and Lambda to ensure asynchronous processing and real-time data synchronization.
- Utilized Python (Flask, FastAPI) for backend services, creating efficient, lightweight microservices in AWS Lambda and GCP Cloud Functions for high-performance real-time applications.
- Leveraged Go to implement scalable and efficient service workers using AWS Lambda and GCP Cloud Run, improving processing times and resource efficiency for large-scale data pipelines.
- Implemented Rust for building high-performance microservices in GCP Cloud Run and AWS Lambda, ensuring low-latency and memory safety.
- Led the implementation of CI/CD pipelines using GitHub Actions and AWS CDK, automating deployments and reducing manual intervention in testing and deployment cycles.
- Implemented unit testing, integration testing, and contract testing using Jest, Mocha, and Pact, with continuous integration through GitHub Actions.

Clients worked: Universal Parks – 2025 | Walmart – 2024 | Walgreens – 2023 | Macys – 2022 | NRG - 2021

Full Stack Developer | Valuelabs LLP

Apr 2017 – Oct 2021

- Developed Node.js REST APIs and GraphQL APIs using Express.js, Fastify, and Apollo Server integrated with PostgreSQL and MongoDB.
- Leveraged Redis and Kafka for implementing message queuing systems and caching mechanisms to optimize high-volume applications with low latency.
- Implemented containerization using Docker and Kubernetes (EKS) for developing microservices and ensuring consistent environments across development and production.
- Designed serverless solutions using GCP Cloud Functions and AWS Lambda, processing events asynchronously and integrating data storage via Firestore (GCP) and DynamoDB (AWS).
- Developed backend services with Python (FastAPI) for data-intensive applications, leveraging GCP Pub/Sub and AWS SQS for event-driven message processing and real-time data handling.
- Wrote Go-based microservices to process high-volume data streams in AWS Kinesis and GCP Pub/Sub, ensuring low-latency, high-performance operations in distributed systems.
- Utilized Rust for performance-critical components, particularly in GCP Cloud Run to improve service efficiency and memory safety while working with large datasets.
- Developed and maintained microservices in AWS using Elastic Beanstalk and EC2 with a focus on high availability and horizontal scaling.

- Implemented CI/CD pipelines with Jenkins, Docker Compose, and Terraform, streamlining deployment and environment management for multi-cloud services.
- Applied test-driven development (TDD) principles, with extensive use of Jest, Cypress, and Postman for full-stack testing.

Software Developer | Yitsol Solutions

Oct 2015 – Feb 2017

- Designed and implemented REST APIs using Node.js, integrated with MongoDB for high-performance data retrieval and persistence.
- Developed real-time applications using WebSockets and Socket.io for real-time notifications and data synchronization.
- Improved application performance and reliability by using Redis for caching and background job processing with BullMQ.
- Utilized Docker to containerize applications and deployed them to AWS EC2 instances for scalable and consistent environments.
- Wrote comprehensive unit tests and integration tests using Mocha and Chai, integrated into the CI pipeline to ensure software quality and reliability.

Software Engineer | Tech Mahindra

Oct 2014 – Apr 2015

- Contributed to building enterprise-grade RESTful APIs using Node.js and Spring Boot for integrating Java and Node.js services in a hybrid application architecture.
- Implemented microservice architectures with Spring Boot in the backend, ensuring the systems were decoupled and scalable.
- Developed a secure OAuth2 authentication system for the enterprise application, integrated with third-party systems for SSO (Single Sign-On).
- Automated deployment and management processes with Docker and AWS to ensure robust and scalable application environments.
- Integrated unit testing frameworks (JUnit, Mockito) and code quality tools to ensure code consistency and high-quality standards.

Software Engineer | Ideabytes Pvt Ltd

Sep 2011 – Sep 2014

- Built model-based testing frameworks using JavaScript and Java to generate test cases dynamically from UML models.
- Developed testing automation tools for regression testing and functional verification, integrating with continuous integration (CI) pipelines.
- Implemented UML modeling tools and worked on Java-based web applications using Spring MVC and Hibernate.
- Optimized legacy systems by refactoring them using Node.js and improving API integration for better scalability and performance.

Education

Master of Science (M.S) in Information Technology

International Institute of Information Technology (IIIT), Hyderabad

Graduated: 2011

- Specialization in Software Engineering, System Architecture, and Model-Based Verification.
- Thesis: Focused on model-based software verification and dynamic test case generation frameworks, utilizing UML and Java.

Bachelor of Technology (B.Tech) in Computer Science and Engineering

Jawaharlal Nehru Technological University (JNTU)

Graduated: 2008

- Focused on core computer science subjects, including Data Structures, Algorithms, Operating Systems, Database Management Systems (DBMS), and Computer Networks.
- Academic projects included compiler simulation and networking tool development using Java and C++.
