PROFESSIONAL SUMMARY

- Accumulated over 10 years of comprehensive experience as a Java Full Stack Developer, specializing in the design, development, analysis, testing, and implementation of distributed web-based applications and client/server applications using Java/J2EE Technologies.
- Proficient in all stages of the Software Development Life Cycle (SDLC), from business requirements analysis to system development and implementation.
- Performed documentation using Swagger.
- Proficient in utilizing Java IDEs such as Eclipse and VSCode for efficient development, debugging, and deployment of Java applications.
- Experienced in utilizing UML design tools such as Builder and Rational Rose.
- Well-versed in Functional and Reactive Programming, having redesigned, re-architected, and built existing applications using Java 11, Spring Boot, Spring Reactive Stack (Web Flux), GCP, PostgreSQL, and Maven.
- Demonstrated expertise in design patterns and best practices, employing technologies like Golang, to develop deployable production systems with scalability monitoring and instrumentation capabilities.
- Skilled in client-side design and validation using HTML, CSS, JavaScript, AJAX, jQuery, AngularJS, and Node.js.
- Proficient in leveraging Next.js, a React framework, to build efficient and dynamic web applications. Demonstrated expertise in enhancing user experiences through server-side rendering and seamless client-side navigation. Proven ability to optimize performance and streamline development workflows using Next.js.
- Utilized Java 8 features such as Lambda expressions and Stream API for efficient bulk data operations on Collections, enhancing application performance.
- Experience in developing client-side validations using Angular versions 2, 4, 7, and 11, as well as developing Custom pipes and Shadow DOM.
- Designed and implemented ETL workflows for fraud detection, identifying anomalies and suspicious patterns in transactional data.
- In my experience I've developed and maintained Java-based solutions for capital markets, specializing in derivatives and fixed income trading. Proficient in crafting robust applications for corporate bond and municipal bond electronic trading platforms, with a keen understanding of market data management and post-trade processing workflows.
- Developed Rich Internet Applications (RIAs) using technologies like Flex, HTML5, CSS, Ajax, Dojo, and Node.js.
- Proficient in working with NoSQL databases like MongoDB and DynamoDB.
- Expertise in MVC architecture using Spring framework, JSP-Servlet, and J2EE Design Patterns.
- Proficient in Struts and Hibernate Frameworks.
- Implemented Pub Sub patterns for effective communication between components, facilitating real-time updates and communication in distributed systems.
- Developed Graphical User Interfaces using AngularJS and designed web pages using HTML, CSS, and JSP for optimal user interaction.
- Enhanced the robustness of communication by leveraging AMQ's support for different message exchange patterns, including point-to-point and publish-subscribe.
- Worked on workflow applications using FileNet workflow services and possess knowledge of JBPM and Drools.
- Experienced in using IDEs such as Builder, WSAD, and Eclipse.

- Leveraged Couchbase's cross-platform support, allowing seamless deployment across multiple cloud providers and on-premises environments.
- Installation, development, and deployment experience with application servers such as WebLogic and WebSphere Application Server. Proficient in creating ANT scripts for software build control.
- Involved in the design and development of applications for high-profile clients, delivering timely and high-quality solutions that have garnered appreciation.
- Developed web and mobile applications using Ext JS and Dojo JavaScript libraries.
- Experience in Microservices development using Spring Boot and deployment in Pivotal Cloud Foundry (PCF).
- Hands-on experience in implementing and designing enterprise applications, employing Java/Java EE design patterns, best practices, coding standards, and practices including IOC (Inversion of Control), AOP (Aspect Oriented Programming), MVC, Business Delegate, Service Locator, Session Façade, DTO, DAO, Front Controller, Factory, and Singleton.
- Leveraged Couchbase's distributed architecture for horizontal scalability and in-memory capabilities, contributing to high-performance data access.
- Implemented PubSub patterns for effective communication between components, facilitating real-time updates and communication in distributed systems.
- Implemented Apache Camel for seamless integration patterns and routing within applications, enhancing communication between diverse components.
- Implemented migration from a traditional relational database to Cockroach DB to address scalability challenges.
- Demonstrated success in implementing complex financial calculations, such as yield-to-price conversions and spread analysis, to support trading activities effectively. Extensive experience in navigating trading protocols including BWIC/OWIC negotiations, offer management, and market data analysis, ensuring seamless execution and compliance within the capital markets landscape.
- Monitored system resources and data pipelines with Unix Shell scripts, ensuring smooth operation of financial data processing systems.
- With a solid background in Java development, I also bring extensive experience in Big Data Management. Proficient in leveraging Java-based frameworks and tools such as Apache Hadoop and Apache Spark, I have successfully designed and implemented scalable solutions for processing and analyzing large volumes of data. My expertise extends to developing data ingestion pipelines, optimizing data storage and retrieval mechanisms, and implementing efficient algorithms for data processing tasks.
- Developed Snowflake data models and schemas optimized for efficient storage and querying, leveraging features like clustering and partitioning.
- Proven ability to work independently and adapt quickly in a dynamic business environment. Quick learner with minimal ramp-up time for new technologies.
- Hands-on experience leveraging static analysis tools like Sonar Cube, Fortify, and SonarLint within project to optimize code quality and enforce project-specific coding standards.
- Incorporating Groovy into our projects allowed seamless integration with existing Java libraries and frameworks.
- Developed and maintained Java-based applications for derivatives trading platforms, specializing in corporate bond (HY or IG) and municipal bond electronic trading markets.
- Expertise in SailPoint IdentityIQ (IIQ) with over 5 years of hands-on experience, specializing in Java development for implementing and customizing identity governance solutions. Proficient in leveraging SailPoint IIQ's capabilities to streamline access management, automate identity lifecycle processes, and enhance security posture for enterprise clients.

- Proficient in enhancing corporate cybersecurity through the implementation and management of Talon's Enterprise Browser, ensuring secure third-party access to corporate applications and systems, particularly in the context of the rising trend of hybrid work and the use of personal devices by employees.
- Conducted Root Cause Analysis (RCA) on incidents, identified and investigated problems related to known errors.
- Experienced in pre/post-production L3 support and identification/resolution of production issues.
- Worked on a claim management system based on IBM Curam, a J2EE-based system.
- Troubleshot complex customer issues and provided technical support.
- Expertise in Agile development of J2EE-based solutions, following iterations and releases, performing software development, unit testing, and creating documentation.

PROFESSIONAL EXPERIENCE

BCBS, Idaho | Java Full Stack Developer Responsibilities

Feb 2022- Present

- Enhanced the existing Java-based claims feed generation process by incorporating claim validation data and transmitting it to the downstream data lake from the legacy claims system.
- Developed batch jobs to automate the feed generation process, ensuring timely and accurate data transfers to the data lake for enhanced claims processing.
- Collaborated with cross-functional teams including claims analysts, compliance officers, and business stakeholders to gather requirements and translate them into technical solutions.
- Designed and maintained scalable, reliable data pipelines using Apache Kafka, enabling smooth communication between microservices and reducing data processing time.
- Supported UAT testing phases by resolving issues and managing defect fixes.
- Utilized Unix Shell scripts to monitor system resources and data pipelines, maintaining uninterrupted operation of healthcare data processing systems.
- Developed ETL processes to consolidate data from multiple sources, ensuring accuracy and consistency in reporting and analytics.
- Designed and implemented post-claims processing workflows, including claim settlement calculations and feeds integration, for accurate and timely claims resolution.
- Configured data sourcing from the Imagine system and its source systems into a new environment, utilizing the existing YAML and Java-based data sourcing framework.
- Integrated Cloud Platform services (AWS, Apigee) and implemented cloud database solutions (MariaDB, DynamoDB, S3 bucket) to support scalability and efficiency.
- Employed Python-based ETL techniques for compliance management, consolidating and analyzing claims data to evaluate market exposure and mitigate potential risks.
- Integrated Spring Batch with ETL tools for streamlined data extraction, transformation, and loading processes, ensuring data consistency and accuracy across systems.

- Utilized AWS Lambda functions written in Python to automate data processing tasks, streamlining data handling and optimizing response times across cloud services.
- Developed GraphQL APIs in Java to enhance data retrieval efficiency, allowing claims processing teams to request specific data, reducing network load, and improving performance.
- Developed high-level architectural diagrams and design documentation to streamline development and provide clear guidance for team members.
- Transformed a monolithic claims application into a microservices architecture using Spring Boot, adhering to the 12-factor app methodology to improve modularity and scalability.
- Integrated Spring Batch with databases like PostgreSQL and MySQL for efficient data handling and persistence.
- Enhanced Groovy-based web applications with GroovyServer Pages (GSP), optimizing server-side rendering for dynamic, responsive content delivery.
- Possess backend development knowledge in Kotlin, enabling shared code across backend and frontend in Kotlin/JS for data models and validation logic, simplifying full-stack application maintenance.
- Leveraged GraphQL in Java to provide flexible data access for financial systems, allowing clients to tailor queries to their needs.
- Enhanced Groovy-based web applications with GroovyServer Pages (GSP), optimizing server-side rendering for dynamic, responsive content delivery.
- Utilized the AGILE methodology and actively participated in SCRUM meetings.
- Leveraged the Curam Workflow API for task enactment.
- Strong knowledge of Cloud application security models, protocols and tools like AWSIAM, AWSKMS policy, Microsoft Azure AD, Cloud Platform (GCP).
- Designed and implemented user interfaces and interactive web pages using HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap and Angular 11.
- Integrated Groovy scripts into CI/CD pipelines to automate build, test, and deployment processes for applications and had familiarity with Groovy, the dynamic programming language used in Grail's development.
- Utilized React Emotion for state-dependent styling, ensuring the flexibility of CSS-in-JS throughout the application and optimizing developer experience and performance with robust coaching in production.
- Improved user experience by designing new web features using MVC frameworks like Express.js and Node.js.
- Applied Next.js in the to develop responsive and data-intensive applications, ensuring optimal performance and real-time updates.
- Leveraged Spring Cloud to integrate the application with Google Cloud Platform (GCP) for seamless connectivity.
- Implemented AJAX and JSON for asynchronous calls to the project server, enabling dynamic data retrieval in real-time.
- Developed a tool that utilized REST to fetch and send data to a third-party service provider, streamlining data exchange.
- Transformed claims application architecture from monolithic to microservices using Spring Boot, aligning with the 12-factor app principles for improved flexibility and maintainability.
- Worked with networking technologies, including DNS/DHCP, Load Balancing (F5 Networks), Firewalls (Cisco Systems, Juniper Networks), IDS/IPS, and IPSEC VPN.
- Collaborated closely with the Kafka team to set up a Kafka cluster for processing claims data in QA and production environments, using Kibana and Elasticsearch to monitor and troubleshoot messaging.
- Deployed, managed, and developed MongoDB clusters, including creating JavaScript for DML operations with MongoDB.

- Used Linux commands to monitor resource usage (CPU, memory, disk), optimizing application performance and minimizing system overhead.
- Performed application deployments and server configurations on Linux environments, including load balancing and security hardening.
- Utilized Jenkins for automating code deployment to Google Cloud Platform (GCP), which included creating new namespaces and building Docker images for streamlined and efficient deployment.
- Integrated Couchbase, a NoSQL database, into application architecture, ensuring efficient storage and retrieval of data in a document-oriented format.
- Acquired domain knowledge in claims adjudication processes, regulatory compliance, and healthcare data management to ensure alignment with industry standards and best practices.
- Developed Spark scripts using Scala shell commands for processing schema-oriented and non-schema-oriented data.
- Enhanced data pipelines to securely source and consolidate claims information from multiple systems, ensuring consistent and accurate claims processing and reporting.
- Developed RESTful APIs to facilitate the exchange of claims data between internal and external healthcare systems, streamlining data sharing and improving interoperability.
- Developed tools to streamline data exchange with third-party claims vendors using REST APIs, improving data flow and reducing processing time.
- Utilized GeoServer to create interactive maps and visualizations displaying market trends and patterns within the financial sector and Integrated financial data such as stock prices and market indices with geographic data to identify emerging market trends and investment opportunities.
- Applied frameworks such as Flask or Django design and implement robust financial dashboards, ensuring a seamless integration of backend data with an emphasis on user experience.
- Deployed Spring Boot-based microservices in Docker

Environment: Java, J2EE, Oracle 11g, Groovy/grails, Web Services, Agile, Hadoop, ETL, Python, Hive, Base, REST, XML, Micro services, CockroachDB ,AWS, Mongo DB, SOA, Spring Framework 4.0, Hibernate, Angular 11, AJAX, Unix, WebSphere, Scala, Neo4j, JavaScript, NodeJS, Reacts, Bootstrap, JQuery, JBOSS, JUnit, Grunt, GitHub, SQL, HTML5, JSP, CVS, CSS3, MVC, Maven and SVN.

***Elevance Health, Atlanta, GA| Java Full Stack Developer
Responsibilities***

Sept 2020 – Jan 2022

- Implemented the Scrum Agile methodology with regular 2-week sprint cycles, working on planned and groomed user stories.
- Participated in Daily Scrum, Sprint Cycle Reviews, Retro, and Planning meetings, collaborating with the Product Owner and Scrum Master.
- Experienced with deploying and hosting Spring Boot applications on cloud platforms, including Azure and AWS.
- Collaborated with risk management teams to implement strategies for positioning inventory sectors and managing market risks effectively.
- Led the development of a user-friendly patient portal for accessing health records, scheduling appointments, and secure communication with healthcare providers, resulting in a 40% increase in patient engagement.
- Implemented GraphQL APIs in Java to provide personalized healthcare information, enabling patients to access relevant medical data and services tailored to their individual needs. This approach enhanced patient engagement and empowerment, contributing to better health outcomes and higher satisfaction levels.
- Deployed applications using Jobs and Tomcat as the application deployment servers to ensure reliable and efficient application delivery.
- Leveraged Linux shell scripting for process automation, enabling efficient monitoring and management of application resources.
- Developed job scheduling and execution for time-critical data loads, utilizing Spring Batch's chunk processing and step partitioning features.

- Proficient in utilizing Groovy for data processing and analysis in the health domain, including parsing and extracting information from electronic health records (EHRs), aggregating patient data for statistical analysis, and implementing machine learning algorithms for predictive modeling.
- Ensured compliance with HIPAA regulations by transforming healthcare data into standardized formats using Python-based ETL pipelines, enabling secure and consistent data processing across systems.
- Developed a React-Redux application from the ground up, prioritizing stable, reusable, and stateless components with a focus on clean, visually appealing design
- Developed HTTP Client interceptors in Angular 7/6 to include necessary JWT tokens for outgoing requests from the user interface and defined Angular 7/6 routes using the Router module to enable lazy loading for modules and components at the module level.
- Created low-level designs for critical components, focusing on modularity, code reusability, and adherence to SOLID principles.
- Implemented data anonymization procedures with Shell scripts to safeguard patient confidentiality and comply with privacy regulations.
- Developed Spring Boot microservices utilizing a microservices architecture, implementing REST APIs and integrating Apache Kafka for efficient communication.
- Established continuous integration workflows with Jenkins, enabling regular testing and integration of code changes.
- Built scalable, microservices-based web applications using Spring Boot and Hibernate, allowing for independent deployment and maintenance of application components.
- Leveraged AWS and Puppet to rapidly provision internal computer systems for various clients within a private cloud environment.
- Utilized GeoServer for disease surveillance and mapping in the healthcare sector and integrated health data systems with GeoServer to visualize the geographical spread of diseases, enabling the identification of hotspots and tracking epidemic progression. This contributed to effective resource allocation and the development of disease prevention strategies.
- Utilized Scala to design and develop Spark applications, comparing their performance with Hive and SQL/Oracle.
- Responsible for implementing modules such as Initialization, Authorization, Controller Request Flows, and Save Transaction to Database modules.
- Utilized the Spring-WS framework to develop SOAP web services for LC 6.7 operations and implemented JUnit test cases within the Curam framework to ensure robust functionality and reliability.
- Implemented an organizational DevOps strategy across Linux, Windows servers, and cloud environments.
- Developed Hibernate mapping files using different mapping strategies, such as table per class hierarchy, and utilized Hibernate Persistence Strategy for database interactions.
- Developed RESTful web services by building a Node.js server in the backend to handle requests from front-end jQuery and AJAX calls.
- Validated forms using Angular 7/6 and regular expressions, providing client-side and server-side validation.
- Administered, monitored, and maintained multi-datacenter Cassandra clusters in production using OpsCenter and Nagios.
- Created and managed clusters in Google Cloud Platform (GCP) using Kubernetes (k8s) and developed applications with AngularJS.
- Leveraged MongoDB internal tools such as MongoDB Compass, MongoDB Atlas Manager, Ops Manager, and Cloud Manager for efficient database management and monitoring.
- Developed and maintained SailPoint IdentityIQ solutions customized for healthcare organizations, facilitating secure and compliant access management to sensitive patient data while adhering to HIPAA regulations and

implemented role-based access controls and automated provisioning workflows to enhance operational efficiency and ensure patient data privacy.

- Utilized CockroachDB as a distributed database solution that ensures high availability, resilience, and seamless handling of increasing data loads and user traffic.
- Led daily stand-ups and scrum ceremonies for two scrum teams, collaborating with product owners to groom the backlog and plan sprints while also enhancing the performance and capacity of the enterprise's virtual system.
- Utilized Scala collection framework to store and process complex consumer information.
- Enhanced the robustness of communication by leveraging AMQ's support for different message exchange patterns, including point-to-point and publish-subscribe
- Developed cross-browser/platform HTML5, CSS, and JavaScript code to match design specifications for complex page layouts while adhering to coding standards.
- Developed an RFP microservice to provide a RESTful API using Spring Boot with Spring MVC.
- Implemented the Spring MVC framework for control flow, business-level validations, and communication with the business layer.
- Worked closely with UI/UX designers to improve user journey and accessibility, aligning the portal's look and feel with user expectations and increasing engagement among older users.
- Utilized Spring AOP for common cross-cutting concerns like security and interception.
- Implemented Docker container service and CI/CD pipelines using Jenkins, Bamboo, and Go CD for continuous integration and deployment in both cloud and on-premises environments.
- Worked on code builds and changes using JavaScript, Python

Environment: JDK 1.8, Spring Boot, Spring MVC, Python, Angular 7/6, Spring AOP, Hibernate 4.0, JAX-RS Web services, Grrovy, JAX-WS Web services, AWS, Micro services, Apache CXF, AJAX, UML, MS Visio, JSTL, Scala, Oracle 11g, Mongo DB, CockroachDB, Docker, Jobs, Selenium, GIT, Bamboo CI, HIPAA, Cucumber, Chef, MongoDB, Meter, Apache Camel, Karma, GCP, Jasmine.

State of California, Sacramento, CA | Java Full Stack Developer
Responsibilities

July 2018 – Aug 2020

- Worked with Business Analysis teams, Product Owner and Clients in collecting and understanding the business requirements and worked with architects in converting them to functional and technical specifications.
- Involved in the Software Development Life Cycle (SDLC), Requirements gathering, Design, Code, Integration, and Deployment and production phases.
- Built Restful web services using Node JS and Express JS and used a full complement of Express.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular 7/6.
- Created and consumed RESTful API using Express.js to provide centralized logic and reusable data retrieval build on top of Node.js.
- Configured job listeners and event handlers in Spring Batch to track job status and handle errors or retries, ensuring reliable and consistent batch processing
- Implemented Logic for pulling the data from the REST API with Axios AJAX and issued HTTP requests to interact with REST endpoints.
- Involved in development of Restful web services using MERN stack, MongoDB, Express React-Redux and Node JS.
- Developed various single page applications (SPA) using React JS and using various components in the Redux library.

- Implemented stringent security measures in Snowflake, including role-based access control and data encryption, to safeguard sensitive historical information and ensure compliance with archival standards.
- Used React-Routers for connecting the APIs, which enforces communication to the server while also implementing mock services in Node.js with the help of modules using Express.js.
- Developed dashboard based on Ajax calls with Business Customers Count, Flags, Real-time graphs for Analytical Reporting using Node JS.
- Implemented JSON web tokens mechanism for authentication and authorization security configurations using Node.js.
- Implemented asynchronous logic for CRUD operations in MongoDB using mongoose connector, and assertions.
- Created Angular 7/6HTTP Client interceptors to add necessary JWT tokens for the outgoing requests from UI.
- Worked on structuring database schemas using a mongoose migration system in MongoDB for quickly implementing logic for manipulation of data.
- Integrated AMQ seamlessly within microservices architecture, facilitating asynchronous communication between microservices.
- Closely worked with the Kafka Admin team to set up Kafka cluster setup on the QA and Production environments.
- Worked on the Splunk architecture and various components (indexer, forwarder, search head, deployment server), Universal and Heavy forwarder.
- Developed, implemented unit test cases and integration test cases using chai and mocha.
- Utilized Selenium for creating web-based test automation suite and perform functional testing.
- Designed, built, and deployed a multitude application using the AWS stack (Including EC2, MongoDB, Docker, Kubernetes Orchestration container (EKS) focusing on high-availability, fault tolerance, and auto-scaling and Load Balancing).
- Utilized Pivotal Cloud Foundry to quickly build, deploy and update the applications and managed Pivotal Cloud Foundry based platform built on Kubernetes programming with deployment manager and containerized using Docker.
- Utilized Grafana to build monitoring and trace / track dashboards by using the data metrics provided by Splunk and MongoDB.

Environment: Java, HTML5, CSS3, Typescript, REACT JS, Redux Chai, Angular 7/6, Mocha, Git, NPM, YARGS Grunt, Bower, Spring Security (JWT), MongoDB, Kafka, Node.js, Express, Jetty Server, AEM, Kubernetes, Docker, GCP, EC2, Jenkins, Splunk.

State Farm, Richardson, TX | Java Full Stack Developer
Responsibilities

Jun 2016 – Jun 2018

- Involved in the Software Development Life Cycle (SDLC), Requirements gathering, Design, Code, Integration, and Deployment and production phases.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular2/4.
- Created and consumed RESTful API using Express.js to provide centralized logic and reusable data retrieval build on top of Node.js.
- Deployed static analysis tools like Sonar Cube and SonarLint to meticulously evaluate codebase integrity and enforce StateFarm's stringent coding standards, facilitating the development of resilient software solutions tailored to the insurance industry's unique requirements.

- Developed automated data pipelines using Snowflake's integration with Apache Airflow, streamlining the ingestion and processing of insurance policy, claims, and customer data.
- Implemented Logic for pulling the data from the REST API with Axios AJAX and issued HTTP requests to interact with REST endpoints.
- Involved in development of Restful web services using MERN stack, MongoDB, Express React-Redux and Node JS.
- Developed various single page applications (SPA) using React JS and using various components in the Redux library.
- Used React-Routers for connecting the APIs, which enforces communication to the server while also implementing mock services in Node.js with the help of modules using Express.js.
- Developed dashboard based on Ajax calls with Business Customers Count, Flags, Real-time graphs for Analytical Reporting using Node JS.
- Implemented JSON web tokens mechanism for authentication and authorization security configurations using Node.js.
- Used React JS virtual DOM for client-side view rendering services, React-Redux for state management and React-Router for client-side routing for dynamically changing client-side content.
- Implemented asynchronous logic for CRUD operations in MongoDB using mongoose connector, and assertions.
- Created Angular2/4HTTP Client interceptors to add necessary JWT tokens for the outgoing requests from UI.
- Developed, implemented unit test cases and integration test cases using chai and mocha.

Environment: Tomcat, Groovy/Grails, Java1.5, JSP2.0, Servlets2.4, EJB2.0, Struts1.2, Spring 2.0.3, JDBC3.0, Design patterns, Html, XML, CSS, Log4j, Ant, SOAP, Web services, RAD6.0, IBM WebSphere server6.1, IBM DB29.0, VSS, Accurev, Junit, Maven.

BOFA, Chicago, IL | Java Developer

Apr 2014 – May 2016

Responsibilities:

- Worked closely with peer developers, business analysts, QA engineers, project manager to develop codes and standards Automated System using Java, J2EE, Ajax, jQuery and JavaScript.
- Implemented Spring framework for dependency Injection, support for the Data Access Object (DAO) pattern and integrated with Hibernate.
- Implemented Business logic for web service using annotations which enables dependency Injection.
- Developed front end using JSP, AJAX, Spring, jQuery, Angular JS, Bootstrap, HTML5, CSS3.
- Involved in RESTful web services for making use of HTTP protocol between client and server. Consumed web services using Apache CXF framework for getting remote information.
- Developed Data persistence API using hibernate and Spring DAO layer.
- Coded various business process methods required for creation of web services related to customer information and provider information using JAX-WS, SOAP, WSDL and JAX-RS, REST web services.
- Implemented critical DB design optimization techniques in the application.
- Designed and implemented Snowflake data lakes for storing and analyzing diverse datasets, including market data, financial instruments, and economic indicators.
- Used table per hierarchy inheritance of Hibernates and mapped polymorphic associations. Developed one-many, many-one, one-one annotation-based mappings in Hibernate.
- Worked on Maven during build process also modified pom.xml to use latest libraries and specifications.

- Worked in build process such as running build scripts to check out the code from SVN to build it and deploying under UNIX boxes also running WebSphere deploy, startup scripts.
- Designed and deployed enterprise services using REST based APIs.
- Coordinated in all testing phases and worked closely with performance testing team to create a baseline for the new application.
- Involved in writing application-level code to interact with RESTful Web APIs, Web Services using AJAX, JSON, XML and jQuery.
- Involved in Authentication & authorization checks using Encryption and decryption techniques using Public/private key methods etc.
- Used maven to manage dependencies in the application and deploy it on WebLogic Application server. CVS was used for version control.
- Responsible for data migration to QA/User and production region.

Environment: Java, Restful API, Spring, Hibernate, Angular JS, JSP, Servlets, HTML, Bootstrap, JavaScript, spring, Spring AOP, XML, XSD, XSLT, CSS, JPA, Junit, jQuery, Apache CXF, RAD, Oracle, PL/SQL, SQL developer, WebSphere Application Server, Maven, Log4j, Unix, Microsoft VISIO, Quality Center, JIRA Tracking tool.

EDUCATION:

Bachelor's in computer science from Kakatiya University, India
 Master's in computer science from University of Missouri Kansas City

JUN 2012
 MAR 2014
