Experience

CrowdDoing

September 2024 – Present

Cybersecurity Consultant

El Dorado Hills, California

- Created cybersecurity training programs attended by 50+ non-IT staff, improving security awareness by 80% based on post training assessment.
- Collaborated with the software development team to ensure secure coding practices and effectively integrated cybersecurity measures into the Software Development Life Cycle (SDLC).
- Implemented TLS encryption to secure data transmission over servers, ensuring confidentiality and integrity of sensitive information. Collaborated with data management teams to identify and mitigate vulnerabilities such as cross-site scripting (XSS) and SQL injection, leading to enhanced Data Loss Prevention (DLP) and strengthened overall security posture.

Sony Corporation of America

May 2023 – August 2023

Security Architect Intern

Herndon, Virginia

- Updated and maintained 8 security documents by aligning them with NIST and MITRE frameworks, addressing gaps to enhance compliance and security. Improved the security posture of the organization by 10% according to internal audits while supporting global information security standards and training development.
- Conducted in-depth research and comparison of AWS (including S3), Azure, and other security providers on fitness, cost, and features, testing them in a Terraform environment to support optimal, cost-effective service selection and security best practice.
- Designed and implemented security architectures for network, cloud, endpoint, and email environments, strengthening protection against cyber threats.

Lotus Infosystems

June 2021 – July 2022

Security Software Engineer

Gujarat, India

- Conducted comprehensive code reviews and vulnerability assessments, identifying and mitigating security risks to strengthen application security and ensure compliance with industry standards.
- Streamlined operations by analyzing client requirements, optimizing data collection, and improving workflow efficiency within an Agile framework.
- Monitored system performance and conducted threat modeling, proactively identifying potential security threats and developing risk mitigation strategies to safeguard infrastructure integrity.

Projects

Moving Cobra Kai to the cloud | [Link](#)

- Designed and produced a secure website architecture on AWS, addressing and resolving 5+ critical security vulnerabilities, reducing the attack surface post migration.
- Migrated the website from an on-premises base to a cloud-based infrastructure, resulting in increased scalability, reliability, and reduced maintenance costs.

Incident Response | [Link](#)

- Investigated a data breach using Wireshark and Splunk, identifying 6 vulnerabilities, leading to the implementation of targeted security measures.
- Improved incident response capabilities and overall security posture by addressing identified vulnerabilities and refining monitoring processes.

Application on Docker and Kubernetes | [Link](#)

- Devised a containerized application using Docker and Kubernetes, creating 3 pods and connecting client and server through 2 deployments, resulting in improved scalability and efficient resource management.
- Developed code in C and Java, enhancing application performance and compatibility across different environments, leading to faster deployment cycles and streamlined operations.

Performing Digital Forensics | [Link](#)

- Utilized technologies such as Autopsy and VeraCrypt to investigate a machine for forensic clues related to a reported crime, successfully identifying malware and uncovering 6 emails proving malicious intent, aiding in the resolution of the case.
- Suggested 5 security improvement recommendations, contributing to the enhancement of digital forensics processes and strengthening the organization's overall cybersecurity framework.

Penetration Testing: Capture the Flag | [Link](#)

- Conducted a comprehensive security assessment for the high-profile 'unmasked' event, successfully penetrating the network and accessing critical information, including a phishing attack to obtain passkey.
- Identified misconfigurations and vulnerabilities within the network, providing detailed recommendations for remediation to fortify the digital infrastructure, including prioritizing patching and updating legacy systems, replacing outdated hashing algorithms, deploying effective encryption, and implementing Multi-Factor Authentication (MFA) to mitigate pressing security risks.

Technical Skills

Cloud & Programming Skills: AWS, Azure, Python, Java, SQL, HTML, CSS, JavaScript, Docker, Kubernetes, Scripting

Cybersecurity & Networking: Penetration Testing, Incident Response, Nmap, Splunk, Nessus, Burp Suite, Wireshark, Autopsy, VeraCrypt, GoPhish, SIEM, OWASP Top 10, MITRE ATT&CK Framework, System and Network Monitoring, Linux and Windows Operating Systems, VLAN, TCP/IP, VPN, IDS, IPS

Education

University of Maryland

August 2022 – May 2024

Masters of Engineering in Cybersecurity

College Park, Maryland

Gujarat Technological University

July 2018 – May 2022

Bachelors of Engineering in Information Technology

Gujarat, India
