

Daniel Mitchell
Senior Full Stack Engineer
Justin, TX 76247
danielmitchell020316@gmail.com | (740) 206-9679

Summary

A highly skilled Senior Full Stack Engineer with over 10 years of experience specializing in JavaScript, Python, C#, Java, and PHP. Adept at architecting and implementing high-performance, scalable web applications and APIs using modern technologies like React, Angular, Django, ASP.NET Core, .NET, and Java Spring Boot. Extensive experience in DevOps, cloud computing, database management, and software optimization. Passionate about solving complex real-world challenges with a focus on security, efficiency, and maintainability. Strong leadership, collaboration, and problem-solving skills with a proven ability to deliver robust and scalable solutions.

Skills

- **Programming Languages:** Python, JavaScript, TypeScript, C#, Java, C, C++, PHP
- **Frontend Development:** HTML5, CSS3, React, AngularJS, Bootstrap, jQuery, SASS, LESS, Vue.js, KnockOut JS, Kendo UI, Ajax
- **Backend Development:** Node.js, Express.js, Django, Flask, FastAPI, Django Rest Framework, ASP.NET Core, .NET Core, .NET MVC, Java Spring Boot, WCF, RESTful Services
- **Databases:** MySQL, PostgreSQL, MongoDB, SQL Server, Oracle, SQLite, InfluxDB, Redis, Elasticsearch
- **Cloud & DevOps:** Docker, Kubernetes, AWS (EC2, S3, Lambda, RDS), Azure (KeyVault, Blob Storage, Databricks, Functions), Terraform, Jenkins, GitLab CI/CD, OpenStack, ELK Stack, Azure Queues, Azure Tables, Azure Logs, Boto3
- **Testing & Automation:** Selenium, Pytest, NUnit, Jest, Mocha, Chai, Spark, Fluent Validation Library, Splunk, New Relic, JIRA, Confluence, Azure DevOps
- **Frameworks & Libraries:** REST API, GraphQL, Entity Framework, Entity Framework Core, LINQ, TensorFlow, PyTorch, PyQt, urllib, SciPy, NumPy, matplotlib, Pandas, Jupyter, DNN9, WordPress

Experience

Lead Developer

Walmart — Bentonville, AR
Jul 2021 – Present

- Led a multi-year initiative to modernize Walmart's e-commerce infrastructure by transitioning legacy monolithic applications into microservices using C# and Kubernetes, resulting in improved scalability and a 40% reduction in downtime.
- Designed and developed a predictive analytics system using Java for order fulfillment, leveraging machine learning algorithms to optimize stock distribution across multiple warehouses, reducing shipment delays by 45%.

- Led frontend development using React and TypeScript to create an interactive analytics dashboard, providing real-time visibility into sales, inventory, and user behavior.
- Enhanced SQL Server performance by optimizing database queries and implementing advanced indexing techniques, improving transaction speed by 70% and reducing data retrieval time.
- Spearheaded cloud migration efforts by containerizing applications with Docker and orchestrating deployments using Kubernetes, significantly improving deployment efficiency and system reliability.
- Refactored and optimized Walmart's API infrastructure, converting REST APIs into GraphQL, reducing redundant network requests and improving frontend performance.
- Developed robust authentication and security features using OAuth2 and JWT, strengthening system security and reducing unauthorized access attempts by 60%.
- Implemented CI/CD pipelines using Jenkins and GitLab CI/CD, enabling continuous integration and reducing deployment failures by automating testing and validation steps.
- Collaborated closely with UX teams to enhance accessibility features on Walmart's online platform, ensuring compliance with ADA guidelines and improving the user experience for disabled users.
- Led cross-functional Agile teams, mentoring developers and conducting technical training sessions to ensure best practices in software development and deployment.

Senior Full Stack Engineer

InRhythm — New York, NY

Feb 2017 – Jun 2021

- Designed and developed a high-performance financial analytics platform using Python and FastAPI, processing billions of transactions in real-time and reducing data processing time by 50%.
- Built a Vue.js-based admin panel with interactive charts and forms, enabling users to manage financial accounts, track spending trends, and generate custom reports efficiently.
- Optimized Django REST APIs by refactoring data serialization methods and implementing caching strategies, reducing API latency by 40% and improving request throughput.
- Led efforts to transition from traditional relational databases to NoSQL (MongoDB) for handling unstructured data, enhancing system flexibility and supporting large-scale data storage needs.
- Created automated deployment pipelines using AWS Lambda and Terraform, eliminating manual configurations and reducing deployment time by 80%.
- Integrated AI-powered fraud detection models into backend services, detecting suspicious transactions in real-time and reducing fraud incidents by 65%.
- Worked closely with frontend teams to refactor existing React components, improving reusability and reducing unnecessary re-renders to enhance application performance.
- Developed an advanced search functionality using Elasticsearch, enabling lightning-fast querying of financial records with complex filters and conditions.
- Led cross-functional discussions with stakeholders to gather requirements and prioritize feature development, ensuring product alignment with business goals.

- Conducted technical workshops for junior engineers, mentoring them in backend API development, Python best practices, and cloud-native architectures.

Full Stack Engineer

Summit IT Solutions — Akron, OH

Dec 2014 – Jan 2017

- Built and maintained C# and .NET MVC applications for financial institutions, ensuring secure and efficient handling of high-volume transactions and customer data.
- Developed Java-based trading algorithms that optimized stock market transactions by dynamically adjusting strategies based on real-time price fluctuations.
- Led frontend refactoring using AngularJS and Bootstrap, modernizing the UI and improving user engagement through a responsive and visually appealing interface.
- Integrated PostgreSQL with high-frequency trading applications, reducing data retrieval times and ensuring database stability under peak loads.
- Developed an authentication system with multi-factor authentication (MFA) and role-based access control (RBAC), strengthening application security.
- Implemented performance optimizations for large-scale applications, improving response times through query optimization and efficient caching mechanisms.
- Designed and implemented a microservices-based architecture to replace tightly coupled monolithic applications, increasing maintainability and deployment efficiency.
- Developed RESTful APIs and integrated third-party services to expand application functionality and streamline external data exchanges.
- Created real-time data visualization dashboards using D3.js, providing actionable insights for business users in finance and analytics.
- Enhanced developer workflows by introducing automated unit testing, code reviews, and CI/CD pipelines, leading to higher code quality and stability.

Software Developer

Frontier IT — Colorado Springs, CO

Aug 2013 – Sep 2014

- Developed and maintained PHP-based web applications, focusing on backend logic optimization and improving overall system stability.
- Built responsive UI components using React and Bootstrap, ensuring a seamless user experience across different devices and browsers.
- Automated data processing tasks with Python scripts, reducing manual workloads by 60% and improving operational efficiency.
- Designed and implemented a RESTful API using Node.js and Express.js, integrating third-party services for seamless data exchange.
- Migrated legacy applications from raw SQL queries to optimized PostgreSQL database operations, cutting down query execution time significantly.
- Integrated secure payment gateways (Stripe, PayPal) into e-commerce applications, improving transaction success rates and fraud detection.
- Developed and deployed real-time notification features using WebSockets, enhancing user interaction and engagement.

- Optimized backend caching strategies using Redis, reducing API response times and ensuring smooth handling of high-traffic scenarios.
- Designed an automated logging and monitoring system using the ELK stack (Elasticsearch, Logstash, Kibana), improving issue resolution efficiency.
- Collaborated closely with UX/UI teams to implement A/B testing, gathering user behavior data and iterating on design improvements based on analytics.

Education

University of Texas at Austin

Bachelor of Science in Computer Science

Location: Austin, TX

Dates: Aug 2009 – May 2013
