

David Wang

Senior Software Engineer

(832) 261-7210 • davidjwtech@gmail.com • Houston, TX

SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, C#, Java, Python, Go, PHP, C/C++

Frontend: React.js, Next.js, Angular, Vue.js, Material UI, Tailwind CSS

Backend: Node.js, .NET Core, Blazor, Spring Boot, Django, Flask, FastAPI, Gin, Laravel

Databases: PostgreSQL, MongoDB, MySQL, SQLite, Oracle, AWS DynamoDB, Firestore, Neo4j, Cassandra

Cloud: AWS, GCP, Azure, Firebase

DevOps: Docker, Kubernetes, Jenkins, CircleCI, Terraform, CloudFormation

Testing: Jest, JUnit, MSUnit, xUnit, Enzyme, Mocha, Chai, React Testing Library, Cypress, Playwright, Cucumber

Other: GraphQL, React Query, Redux, Grafana, Splunk, Datadog, Linux, Webpack, Vite

PROFESSIONAL EXPERIENCE

Litera

11/2019 – Present

Senior Software Engineer

- Design and develop scalable, high-performance web applications for legal technology solutions, empowering millions of legal professionals globally with streamlined document management and workflows.
- Introduce AI-driven technologies to revolutionize document analysis and proofreading, enhancing tools like Litera Draft with intelligent automation that reduces errors and accelerates client deliverables.
- Integrate third-party APIs to expand platform capabilities, enabling seamless interoperability with external legal systems and driving operational efficiency for law firms and corporate teams.
- Optimize the Litera One Platform's user management and authentication systems, ensuring secure, scalable access for a global user base while maintaining compliance with industry standards.
- Collaborate with cross-functional teams-bridging product, design, and sales-to align technical solutions with business goals, delivering intuitive tools like Litera Compare that boost user adoption.
- Implement robust testing strategies with integrated tools, proactively identifying and resolving bottlenecks to deliver reliable, high-quality software trusted by 99% of Am Law 100 firms.
- Enhance security protocols by embedding metadata cleaning and encryption into Litera SecureShare, safeguarding sensitive legal data against evolving threats.
- Mentor junior developers and lead knowledge-sharing initiatives, cultivating a high-performing team equipped to tackle complex challenges in legal tech.

Walmart

02/2014 – 10/2019

Software Engineer

- Designed and developed scalable web applications for Walmart's membership platform, enhancing subscription services and benefits for millions of members across digital and in-store channels.
- Integrated third-party APIs to streamline subscription billing and partner benefit systems, ensuring seamless access to perks like free shipping and exclusive services for Walmart members.
- Spearheaded the development of real-time membership status and rewards tracking tools, improving member satisfaction with instant visibility during high-traffic periods.
- Collaborated with product UI/UX, other tech teams, and teammates to deliver intuitive membership features, ensuring seamless integration and a cohesive user experience.
- Implemented comprehensive testing strategies, including unit testing, end-to-end (E2E) testing, and integration testing, ensuring the membership platform's reliability and performance across diverse scenarios.
- Enhanced system observability by leveraging tools like Splunk, Grafana, and xMatters, enabling proactive monitoring and rapid issue resolution for a seamless member experience.
- Drove modernization of membership systems by resolving legacy integration issues, enabling smoother transitions to scalable, cloud-based architectures for future growth.

EDUCATION

San Jose State University

2010 - 2014

Bachelor of Science in Computer Science
