

OBJECTIVE

To obtain a network engineer position

HIGHLIGHTS OF QUALIFICATIONS

- 15 years' experience as a network engineer in a complex network environment with routing, switching, security technology
- 13 years ISP backbone buildup and maintenance experience
- 1 year of Residence Engineer for Windstream
- 2 year of Residence Engineer for Department of Water Resources
- 1 year of Residence Engineer for Panasonic
- 5 year of Residence Engineer for Comcast
- 4+ years' Blackberry experience to support complex networks and over 400 carriers
- Expert in OSPF, ISIS, BGP, EIGRP, STP, VTP, VPN, MPLS, RSVP, VPLS, EVPN/VXLAN, QoS and DNS
- Hand-on experience on troubleshooting all kinds of circuits
- Excellent hands-on experience on various network devices, including Cisco routers, switches, IBM Blade Center , CRS, ASR, ASA, Juniper router and firewall, VPN, Cisco IDS security appliances , F5 Load Balancer Juniper MX2020, 2010,960 ,480,240,PTX,SRX3600/5800,Nexus 7K ,Nexus 5K,2K, UCS , 1000v
- Excellent hands-on experience in architecting, deploying, and supporting internetworking based on business requirements
- Customer-oriented, excellent time management and organization skills, drive to learn and a great team player
- Good troubleshooting skill for both networking and application layer

CERTIFICATION

- CCIE R&S(No.20546).....2008
- JNCIE-SP (No.01925).....2013
- JNCIE-SEC(No.00153).....2014
- CCIE DC.....2015
- CCIE-ISP.....2017
- JNCIA-DevOps (Automation and DevOps, Associate).....2020
- JNCIA-Cloud (Cloud, Associate).....2020

TECHNICAL SKILLS

- Security: Cisco ACS (including Radius and TACACS+), ASA5580, FWSM, Juniper SRX series ,Juniper router , Cisco IDS security device
- Routing and switching technology: TCP/IP, OSPF, EIGRP,ISIS,RSVP, BGP, multicast, VLAN, VTP, STP, HSRP, VRRP, NAT, GRE, MPLS , MVPN,VPLS, Kompella, Martini l2vpn and JUNOS,OTV, Fabric path, EVPN/VXLAN
- Cisco routers : 7200/3800 ,CRS ,ASR9k,ASR1k Series, NCS
- Cisco switches :Catalyst 6500/4500/2900,Nexus 7K/5K/4K/2K series,UCS,1000V
- Juniper router :MX2020,MX960,MX480,MX240,PTX,EX4200,EX4500,QFX10002,SRX5800,SRX3600
- Network Management and troubleshooting Tools (HPNA, Ehealth, Arbor, Niksun, NetFlow and Sniffer)
- Storage :MDS , FC, iSCSI, FCIP,FCOE
- VM: ESXi5.0
- Siena and Arista switch
- Python, Ansible, Jinja2 template

WORK EXPERIENCE

Network engineer at Pyramid.....Feb 2024--now

- Designing and installing network infrastructure, including on-premises systems and cloud networking solutions
- Involving in backbone capacity projects.
- Deploy latest hardware in complex production environment.
- Hardware and Software testing and deployment in a multi team environment.
- Support Client's Network Operations Center and Cable Systems with issues escalated to Backbone.

Juniper Residence Engineer for Windstream.....Mar 2023-Mar 2024

- Help Windstream trouble shooting and improve configuration to reduce the convergence time.
- Test new BNG (broadband network gateway) configuration on MX304
- Help and support Windstream Mist environment.
- Review Mop for new architecture deployment
- Provide technical training to operational units on Juniper Networks technologies and features that are currently deployed in the network or will be in the future.

Juniper Residence Engineer Department of Water Resource(contract).....Jan 2021-Feb 2023

- Design and deployment DWR new office building evpn/vxlan network
- Optimized routing between DWR data center and other sites
- Support and troubleshooting DWR new data center contrail environment.
- Design collapsed evpn/vxlan core switch and replaced old cisco/arista switches for Joint operations Center
- Help and support DWR Mist environment.
- Help DWR build switch template for different purpose
- Prepare migration from contrail to Apstra

Juniper Residence Engineer for Panasonic Avionics (contract).....Jan 2020-Jan 2021

- Participate and execute the managing of key process improvement initiatives to support business continuity and reliability of network infrastructure
- Participate in the discussion of application deployment guidelines and processes culminating in the successful execution of the deployment
- Define, document, and schedule backups and recovery processes to ensure network restoration.
- Assist in the development and implementation planning for the roll out of future hardware and software versions of network devices.
- Recommend and implement network monitoring changes following best practices guidelines
- Provide highest level escalation response to trouble tickets in a timely fashion and in compliance with NOC/CPC standards
- Python/Ansible Jinja 2 template and playbook writing for automation project
- Test EVPN/VXLAN/ESI-lag solution for data center.
- Test SRX UTM deployment via Security Directory

Juniper Residence Engineer for Comcast (contract).....Jun 2015-Jan 2020

- Create and document high-level and detailed network designs for the CRAN/Converged Commercial Networks, as well as for the augmentation of existing commercial networks
- Generate network configurations to support market augments and CRAN/Converged Commercial Networks designs
- Develop and implement routing architectures for the roll-out of Metro Ethernet products.
- Assist in the development and implementation planning for the roll out of future hardware and software versions of network devices.
- Provide On-Call support, focused on isolating and resolving network outages
- Provide technical training to operational units on CRAN/Converged Commercial Networks technologies and features that are currently deployed in the network or will be in the future
- Work independently with little supervision while managing assigned projects and ensuring timely delivery of services
- Communicate applicable design guidelines and provide guidance to markets to ensure compliance
- Writing python scripts to collect network information and monitor network alarm

Network Architecture/Engineer

Syniverse..... Aug 2013—Jun 2015

Responsible for Design and Deploy IPX backbone and New Data Center setup

- Troubleshooting of MPLS/Traffic engineering – service provider backbone
- Bringing up new juniper backbone router
- Design and implement new DC
- Trouble shooting escalated case from network support team
- Optimize network according service requirement
- Carry out testing of new features and functionality required by the customer in a laboratory environment and to implement and verify that they are operating correctly in the live network
- Troubleshoot equipment and network problems and to track JTAC critical (P1/P2) cases through to problem resolution.
- Integrate new company's network into our NGN backbone
- Maintain and Optimize internal routing protocol (IS-IS,OSPF,RSVP,LDP)
- Provide feasible solution to client to access our IPX network

Senior network Network Analyst

BlackberryNovember 2008-Jul,2013

Responsible for providing support for Blackberry Network

- Supporting a complex network(which including about 9000 network devices, 12 data centers and 6 networks nodes globally) with over 4 hundreds carriers(including Verizon, AT&T, T-Mobile) and 75 million customers
- Plan and implement the various network changes, including the network topology upgrade, Data Center cut over, carrier migration changes
- incident and problem tickets in Remedy, write, approve, and implement MOPs (Method of Process) for network implementation based on ITIL-based change management processes
- Support the investigation of any Blackberry network or service issues, provide quick, precise problem resolution for a large complex global environment by phone and e-mail
- Configured and supported multiply kinds of devices such as ASA, FWSM , Cisco router, IBM Blade Center Nexus switches, F5 load balancer, Juniper SRX series,MX960
- Deployed and maintained routing protocols such as OSPF, EIGRP, BGP, GRE,MPLS/VPN, HSRP and static routes on Cisco routers and switches and Juniper routers

- Configure carrier specific VRF, eBGP address-family, firewall object groups, firewall rules, NAT/PATs, multiple contexts, stateful failover, SSH, AAA, SNMP, logging etc
- Re-engineered BGP routing (Route Maps, AS-Path prepend, MED, Local Preference) to load balance traffic across multiple links
- Troubleshooting all kinds of routing , circuit or hardware issues with carrier
- Supported and configured high performance, fully redundancy MPLS network connecting data centers across the world
- Dealing with varieties of vendors such as Cisco,Juniper and F5 or worldwide ISPs like TATA, Verizon, AT&T, Level 3 etc. for any hardware and software issues
- Deployed the configured Nexus 7000/5000/4000/2000 into production
- Configured and tested all kind of circuits
- Configure F5 LTM/GTM virtual servers, pools, iRules as well as install, renew SSL certificates, troubleshoot load balancing or SSL related problems
- Implementing multicast across mpls backbone
- Involved in new DC setup, configured MX960 as P/PE router (configuring ospf ,ldp,bgp and creating vrf for each segment)

Training

- Cisco CRS / Wireshark / MPLS / IPv6 Fundamentals / Implementing a Cisco multicast infrastructure / BIG-IP global traffic manager/Juniper SRX/MX serial router/F5 LTM GTM/Cisco storage,linux

EDUCATION

- Bachelor degree of Engineering.....1990-1994
