Education

University of Lagos, Overseas

Bachelor of Science: Computer Science

Certifications

- AWS Certified Cloud Practitioner - Certified.
- AWS Certified Solutions Architect (Associate) Certified.
- AWS Certified Solutions Architect Professional - Certified.
- AWS Certified Security Specialty - Certified.
- CyberArk PAM- Certified.
- CyberArk SENTRY -Certified

Skills

AWS WAF, SSL certificate, Identity Access Management (IAM), AWS Security Token Service (STS), AWS Security Hub, AWS Guard Duty, AWS KMS, AWS SNS, AWS Cloud Watch, AWS Cloud Trail, Cloud Formation, Terraform, ECS Containers, Jira, SDLC, Sumo Logic, Dome9, Terraform. Palo-Alto Firewalls, Prisma Cloud [CSPM] Payment Card Industry Data Security Standard Compliance (PCI DSS), CIS Top 18 Controls, Tenable Nessus, AWS Cloud Security and Infrastructure experience, Vulnerability Management & Gap assessment, Security Guard Rails, AWS Security Hub, AWS Guard Duty, AWS Inspector, AWS VPC, VPC Flow logs, SIEM.

Professional Experience:

IAM Architect / Citizens Bank – Rhode Island, RI May 2023 to Dec 2024

- Designed, Support the installation and configuration of IAM with OKTA, SSO [Single Sign-On], CyberArk Privileged Access Security (PAS) Solution (e.g., AIM, EPV, (CPM), (PVWA), PSM, Privileged Session Manager for secure shell (PSMP) and many more For Citizen's enterprise environment.
- Integrating SailPoint with CyberArk helps automate the provisioning and de-provisioning of privileged accounts and ensure that access to sensitive resources is properly governed.
- SQL Server Database Management refers to the comprehensive process of administering, configuring, and maintaining databases using Microsoft SQL Server. SQL Server is a relational database management system (RDBMS) that provides tools and features for storing, retrieving, and managing data, making it suitable for a wide range of applications, from small-scale systems to enterprise-level data environments
- Experience with Identity Governance and Administration (IGA) and Privileged Access Management (PAM) tools (Okta, SailPoint, SAML, Ping Identity and

CyberArk developed cybersecurity framework. PIM Privileged Identity Management

- Integrated Vault by HashiCorp powerful tool for securely managing and accessing sensitive information, making it ideal for the organization to deal with sensitive data, whether it's credentials, API tokens, encryption keys, or certificates. Its ability to provide dynamic secrets, encryption as a service, and seamless integration with cloud and on-premises environments makes it a critical component of modern secure infrastructure.
- Supported in building session management capabilities using CyberArk PSM and PSMP, leveraging knowledge of CyberArk features and capabilities to maintain development, pre-production and production CyberArk environments.
- Integrated ServiceNow and provided technical support and training to end-users, enhancing their ability to effectively utilize ServiceNow models and tools.
- Evaluate and recommend appropriate integration patterns, tools, and technologies. Proven ability to write script in Python and Java in clear and concise technical documents including design documents, specifications, and technology roadmaps.
- Integrated Anaplan with ERP and accounting systems, streamlining financial data flow and reducing manual data entry.
- Work with IAM team to successfully deploy PSM/PSMP servers in AWS via Terraform pipeline. This will require Python role for CyberArk PSM.
- Developed PlainID helps enterprises address the complex challenges of Identity Security. This PlainID Platform allows you to discover, manage, and authorize access control policies for enterprise applications and data.
- Developed future strategy to change architecture for the vaults (e.g. distributed vaults on-prem and in AWS, disaster recovery) for the Bank Implemented secure solutions to protect assets in the cloud, including encryption, authentication, and authorization by using Identity Governance and Administration [IGA] and Role-Based Access Control [RBAC] in managing access to resources.
- Built and configured IAM dashboards to provide actionable insights and improve decision-making processes for finance teams.
- Experience with Identity Governance and Administration (IGA) and Privileged Access Management (PAM) tools (Okta, SailPoint, SAML, Ping Identity, ServiceNow and CyberArk developed cybersecurity framework. PIM Privileged Identity Management
- Developed architecture that mitigated security threats in cloud-based environments, determined which security threats were most critical in the cloud, determined which threats were most common to healthcare industry, and developed security threat models to determine the impact of identified threats.
- Defined, implemented, and supported cloud security policies, processes, and service integration across the organization.

Senior Cloud Security Engineer / AmerisourceBergen - Philadelphia, PA Jan 2019 to Apr 2023

- Evaluated and mitigated security threats through automated and manual analysis and provided enterprise-wide security assessments.

- I Leveraged cloud platforms-AWS Cloud exp required. I implement serverless functions, APIs, and event-driven workflows.
- Work with PAM Team to successfully deploy PSM/PSMP servers in AWS via Terraform pipeline. This will require a Python role for CyberArk PSM for seamless IAM.
- Developed VBA scripts to automate data import/export processes between Excel and Anaplan, streamlining data workflows and reducing manual data entry.
- I evaluate third party software tools and libraries for enterprise needs with risk management.
- Assisted in designing, implementing, and testing cloud security, including business continuity, disaster recovery, and system monitoring.
- Followed up with teams responsible for Patching Windows systems within on-prem and cloud environments that are part of VTM scan results.
Designed and developed comprehensive Anaplan models for planning, including budgeting, forecasting, and performance tracking, enhancing planning accuracy
- Developed interactive reports and dashboards with ACL to provide real-time insights into key performance indicators, enhancing decision-making for finance and sales teams.
- Increased security awareness of employees and clients through training, workshops, and presentations.
- I implemented out-of-the-box or custom PSM plug-ins that include but not limited to remote desk protocol (RDP), secure shell (SSH), web based, local clients and more. Systems requirements, secured platforms, disaster recovery, capacity sizing, and availability planning.
- Experience with Identity Governance and Administration (IGA) and Privileged Access Management (PAM) tools (Okta, SailPoint, SAML, Ping Identity and CyberArk developed cybersecurity framework. PIM Privileged Identity Management
- Developed and implemented secure solutions to protect assets in the cloud, including encryption, authentication, and authorization.
- Created complex ACL formulas to manage inventory valuation and demand forecasting, optimizing stock levels and reducing excess inventory
- Support development and deployment of CyberArk PSM/PSMP/CPM components in automated delivery to multiple data centres and network zones. I assisted with configuring the PSM health check service.
- Created a cloud security strategy for critical data-centre infrastructure and implemented a hybrid cloud

Cloud Security Engineer / Vulnerability Mgt | Ingram Micro - Los Angeles, CA 01/2015 - 11/2018

- Assessed the security posture of companies like Bank of America cloud environment, including identifying sensitive data stored in the cloud, identifying security controls, and determining how to mitigate security incidents.

- Maintained one of Ingram Micro client Bank of America “Situational Awareness” around industry news on software vulnerabilities, including 0-day vulnerabilities and emergency patching.
- Designed and developed a full-scale test lab to determine the security posture of AWS cloud.
- Coordinated with stakeholders to drive remediation of vulnerabilities in compliance with company policy and applicable regulatory requirements such as PCI and SOX.
- Experience with Identity Governance and Administration (IGA) and Privileged Access Management (PAM) tools (Okta, SailPoint, SAML, Ping Identity and CyberArk developed cybersecurity framework. PIM Privileged Identity Management
- Implemented a highly scalable, cloud-based platform for performing security checks, analyzing results and identifying areas for improvement leveraging Dome9 and AWS Security Hub.
- Designed and built security architecture and infrastructure for secure infrastructure and infrastructure automation.
- Sifted through large data to prioritize impactful vulnerabilities and reduce noise often associated with vulnerability tools.
- Enabled validation of reduced risk, by confirming vulnerable assets remediate through reporting.
- Designed, implemented, and managed a secure cloud-based solution for multiple cloud providers to securely store company data.
- Developed and maintained vulnerability management processes and standards.
- Supported, maintained, and integrated vulnerability management solutions with various systems and applications within BOA.
- Built out cloud environment for day-to-day operations, designed and implemented solutions to secure cloud infrastructure.
- Implemented cloud security architecture to integrate security into all applications, applications, security, software, and information technology.

Cybersecurity Analyst / GEICO – Maryland Mar 2011 to Dec 2014

- Led a team of 5 analysts to identify and prioritize data sources and analysts to ensure the highest quality of information.
- Collected, analysed, and stored all necessary information to identify potential threats to the organization.
- Assessed current cyber security posture to identify current gaps and determine the scope of the company's risk to the organization.
- Experience with Identity Governance and Administration (IGA) and Privileged Access Management (PAM) tools (Okta, SailPoint, SAML, Ping Identity and CyberArk developed cybersecurity framework. PIM Privileged Identity Management
- Worked on penetration testing teams to research potential vulnerabilities and secure networks.
