EXPERIENCE

Trained Inc, Pittsburgh, PA— *Senior Software Developer*

August 2024 - April 2025

- Worked in an enterprise-sized tech-stack meant to facilitate the verification and validation of mortgage documents
- Worked with cutting edge AI models in Azure OpenAI to boost the validation and extraction of mortgage documents
- Implemented an on-premises Python FastAPI server to serve AI models and handle LLM queries both with images and text
- Heavy usage of the Azure environment both for code hosting and AI capabilities.

Timesys LLC, Pittsburgh, PA— *Senior Software Engineer*

September 2022 - August 2024

- Updated and maintained an enterprise-sized Python Flask web application to detect, triage, and remediate vulnerabilities by scanning SBOMs against multiple CVE sources
- Added React Native to the front-end stack utilizing the PrimeReact UI suite
- Facilitated the addition of Okta SSO to the back-end stack
- Created, updated, and improved upon user and developer documentation following IEEE guidelines

UPMC Corporate Services, Pittsburgh, PA— *Intermediate Software Engineer*

June 2020 - August 2022

- Full stack development of a Python Django web server
- Designed and implemented a project management system using Azure Devops APIs and the Django web server

EDUCATION

Robert Morris University — *Bachelors of Science - Engineering, Concentration in Software Engineering*

September 2016 - June 2020

Robert Morris University — *Masters of Science - Engineering Management*

August 2019 - June 2020

SKILLS

Python - 12 years

Javascript/Jquery - 10 years

HTML and CSS - 8 years

Git/Gitlab/Github - 8 years

Full-Stack Web Development - 7 years

Agile Scrum - 7 years

Linux - 7 years

SQL - 5 years

AJAX - 5 years

Bootstrap - 5 years

RESTful APIs - 5 years

nGINX - 5 years

Postgresql - 4 years

C++ - 4 years

API Development - 4 years

Kanban - 4 years

Flask Web Framework - 4 years

Docker - 4 years

Django Web Framework - 3 years

Apache Web Server - 3 years

Python Pandas - 3 years

MAJOR PROJECTS

FastAPI vLLM Web Server — 2025 (Not Implemented)

- Developed an on-premises LLM (Large Language Model) server using FastAPI and vLLM, aiming to replace Azure OpenAI and reduce costs.
- Implemented a containerized architecture featuring an Nginx reverse proxy, which served as an API gateway to route requests to backend services.
- Backend services included individual AI models deployed via vLLM's Docker images, and a custom container for pay stub earnings table data extraction.
- Created a pay stub extraction container using FastAPI and Pydantic for data validation and API endpoints.
- Designed an image processing pipeline within the extraction container that used OCR (Optical Character Recognition) to identify text, then filtered words to locate and crop the earnings table area using Python's Pillow library.

React Front End Modernization — 2021 - 2022

- At Timesys, the existing front-end was based on jQuery, AJAX, and Bootstrap.
- Successfully designed and implemented React components using the PrimeReact UI library into the existing system.
- The React components aimed to organize Software Bill of Materials (SBOM) data into a user-friendly interface.
- This interface allowed users to view CVE-IDs (Common Vulnerabilities and Exposures) associated with each SBOM component.
- Users could navigate directly to detailed information about the CVEs on the cve.org website.
- The React components were built using Babel.
- The React components were integrated into the system using the npm package react-dom.

GymVantage — 2019 - 2020

- GymVantage was an Ecommerce website built with Python's Django web framework.
- The website personalized pre-workout based on a short quiz completed by customers upon logging in.
- The front end was powered by Bootstrap 4, AJAX, and jQuery, allowing for a highly customizable design.
- Payment processing was handled by the Python Stripe SDK, providing an easy-to-use and secure payment method.
- Login was exclusively done with Google's SSO Python SDK.

SKILLS CONT.

C# - 3 years

Azure Active Directory - 3 years

React Native - 2 years

Redhat Openshift - 2 years

Project Management - 2 years

E-Commerce Site Development - 2 years

AWS - 1.5 years

Java EE - 1 year

Azure OpenAI - 1 year

Azure Functions - 1 year

Azure Document Intelligence - 1 year

AI/ML - 1 year

Python vLLM - 1 year
