

FAIZAAN SIDDIQUE

SENIOR FULL-STACK DEVELOPER

Westminster, MD, United States, 21157 | faizaansiddique854@gmail.com | 443-300-1590 | [LinkedIn](#) | US Citizen

Professional SUMMARY

I'm an innovative and results-driven **Full Stack Developer / AI-Driven web solution** expert with 10+ years of experience designing, developing, and deploying scalable web applications and AI-powered solutions. Proficient in both frontend and backend technologies including JavaScript (React, Angular), Node.js, Python, and Ruby on Rails. Skilled in integrating **AI/ML models** into modern web platforms to enhance user experience, personalization, automation, and data analysis. Strong background in cloud platforms (**AWS, Azure**), **RESTful APIs**, **CI/CD pipelines**, and agile methodologies. Passionate about building intelligent, high-performance applications that bridge cutting-edge AI with seamless UI/UX. Strong expertise in **UI/UX, API integration, cloud solutions, database optimization, and DevOps**. Known for delivering well-architected solutions and leading teams to develop top-tier software products.

Frontend Development

- **React.js | Next.js** | Redux | TypeScript | JavaScript (ES6+) | Vue.js
- UI Frameworks: **Tailwind CSS, Bootstrap, DaisyUI, ShadCn, RadixUI**
- Animation Libraries: **Animate.css, GSAP (GreenSock Animation Platform)**
- State Management: **Redux, Context API**
- **AI powered UI Enhancement** Integrated LLMs and recommendation systems into frontend components to create smart, adaptive user interfaces.

Backend Development

- **Node.js | Express.js | Ruby on Rails | Python (Django)**
- RESTful APIs | Microservices Architecture | WebSockets | **AI/ML Integration on the backend**
- CI/CD Pipelines | Docker | Kubernetes | Cloud Platforms (**AWS, Heroku, Render, Vercel**)
- Database Management: **PostgreSQL, MySQL, MongoDB, Firebase**
- **Serverless & Cloud Functions**

Other Technologies

- **OpenAI & Generative AI APIs** | GitHub Actions | Testing Frameworks (JUnit, PHPUnit)
 - Clickup | Trello | Jira | DevOps | WordPress | Shopify.
-

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer

Codebridge Technology | Jun 2022 – Present

- Developed and maintained responsive, high-performance user interfaces using React.js and Next.js, ensuring compliance with modern UI/UX standards, accessibility, and mobile-first design.
- Built reusable component libraries and design systems using DaisyUI, ShadCn, and RadixUI, accelerating development cycles and enforcing visual consistency across multiple projects.

- Engineered frontend architecture for scalability and maintainability, leveraging Redux, Context API, and custom hooks to manage complex application state effectively.
- Optimized frontend performance through lazy loading, code splitting, memoization, and Next.js SSR/ISR, significantly reducing page load times and boosting Lighthouse scores.
- Collaborated cross-functionally with backend engineers (Node.js, Ruby on Rails) and designers to integrate APIs and ensure seamless full-stack data flow.
- Developed and maintained responsive, multi-site, multi-lingual web applications using Adobe Experience Manager (AEM), ensuring accessibility and performance across global markets.
- Designed and implemented custom AEM components and templates to meet client-specific content and functionality requirements.
- Integrated React.js front-end applications within the AEM framework to create dynamic, interactive user experiences.
- Connected AEM instances with external systems via RESTful APIs, enabling seamless data exchange and third-party service integrations.
- Conducted regular design and code reviews to ensure adherence to best practices, maintainability, and scalable architecture.
- Wrote and maintained unit and integration tests to ensure system stability and high code coverage.
- Used modern frontend tooling such as Webpack, Vite, and Babel for fast build processes, environment setup, and optimized production bundling.
- Wrote and maintained unit and integration tests using Jest and React Testing Library, achieving 90%+ test coverage and reducing post-release bugs.
- Integrated third-party APIs and services like Stripe (for payments) and Twilio (for messaging), enhancing product features and streamlining user workflows.
- Actively participated in Agile ceremonies (standups, retrospectives, sprint planning), contributing to a culture of continuous delivery and iterative improvement.
- Contributed to CI/CD pipelines using GitHub Actions, enabling automated testing, code quality checks, and smooth deployment workflows.
- Mentored junior developers and participated in code reviews, promoting clean code practices, reusable design patterns, and scalable frontend architecture.
- Delivered engaging, interactive user experiences by integrating animation libraries such as GSAP and Animate.css, enhancing usability and visual appeal.
- Ensured cross-browser and cross-device compatibility with responsive layouts and pixel-perfect implementations, tested across modern browsers and platforms.

Python (Django) backend Developer / Sr. Software Engineer

DXC Technologies | Nov 2020 – Jun 2022

- Designed and developed robust web applications using Django and Django REST Framework (DRF), delivering secure and scalable APIs for both internal tools and client-facing solutions.
- Architected modular and reusable Django apps, enabling rapid development and standardization across microservices and distributed systems.
- Built high-performance, low-latency REST APIs with <100ms response time for high-throughput endpoints, supporting frontend integrations, mobile apps, and third-party services.
- Created a backend architecture for an AI-powered lead generation platform with OpenAI integration, enabling automated data enrichment and outreach workflows.
- Implemented advanced authentication and authorization systems using JWT, OAuth2, and Django AllAuth, incorporating social login support and custom access controls.
- Developed background processing with Celery and Redis, offloading tasks such as email delivery, report generation, and batch processing for enhanced system responsiveness.
- Tuned ORM performance using `select_related`, `prefetch_related`, and raw SQL where necessary, improving query performance by up to 40% on reporting dashboards and analytics endpoints.
- Containerized applications using Docker, streamlining local development and ensuring production parity to reduce deployment issues.

- Integrated third-party services including Stripe, SendGrid, and Twilio, automating workflows such as payments, email notifications, and SMS delivery.
 - Led the migration from monolithic architecture to microservices, leveraging Django Ninja and FastAPI to build lightweight, scalable services.
 - Ensured high system availability through PostgreSQL configurations with replication, backups, and connection pooling strategies.
 - Implemented CI/CD pipelines using GitHub Actions and GitLab CI, automating test, build, linting, and deployment workflows across AWS, GCP, and Azure environments.
 - Enforced secure coding practices aligned with OWASP Top 10, mitigating risks through CSRF protections, input sanitization, and secure session handling.
 - Achieved 90%+ test coverage with PyTest and Django TestCase, improving release confidence and reducing regressions in production.
 - Mentored junior developers, led code reviews, and promoted backend best practices around maintainability, security, and testing.
 - Instrumented application monitoring and performance tracking with Sentry, Prometheus, and Grafana, enabling proactive resolution of system issues.
 - Conducted regular database and schema audits using Django Debug Toolbar and EXPLAIN plans, and implemented caching strategies through Redis to reduce query loads.
-

Backend Software Engineer

Dexxian | March 2018 – Nov 2020

- Designed and developed robust and scalable backend services using **Node.js**, ensuring high performance and maintainability.
- Developed a **microservices-based architecture**, allowing for modular development, easy scalability, and improved fault tolerance.
- Designed and implemented **RESTful APIs** to facilitate seamless communication between the frontend and third-party services.
- Followed industry best practices for **code organization, modularization, and maintainability**, ensuring easy collaboration and future scalability.
- Implemented **server-side rendering (SSR) and backend logic optimizations** to enhance the performance of web applications.
- Developed and integrated **secure authentication mechanisms** using **JWT (JSON Web Token), OAuth 2.0, and session-based authentication** for user verification and authorization.
- Implemented **role-based access control (RBAC) and attribute-based access control (ABAC)** to restrict access to sensitive APIs based on user roles and permissions.
- Enforced **security best practices**, including **input validation, rate limiting, CORS policies, and encryption techniques** to protect against common vulnerabilities like SQL injection, XSS, and CSRF attacks.
- Integrated **multi-factor authentication (MFA)** and single sign-on (SSO) using **Auth0, Firebase Authentication, and AWS Cognito** for enhanced security.
- Designed and optimized **SQL (MySQL, PostgreSQL) and NoSQL (MongoDB, Firebase, Redis)** databases for high availability, performance, and efficient data retrieval.
- Improved **backend performance** by optimizing **database queries, indexing, and caching mechanisms** (Redis, Memcached) to reduce load times and improve API response rates.
- Conducted **query profiling and database performance tuning** to eliminate bottlenecks and improve overall application efficiency.
- Implemented **database sharding and replication strategies** for large-scale applications to distribute workload and ensure high availability.
- Designed and implemented **data migration scripts and ETL (Extract, Transform, Load) processes** for seamless data transitions across environments.
- Integrated cloud-based services (AWS, GCP, Azure) for **storage, compute, and API hosting**, ensuring seamless scalability and reliability.
- Deployed applications using **containerization technologies like Docker** and **orchestrated microservices using Kubernetes** for efficient resource management.

- Configured and managed **CI/CD pipelines** (Jenkins, GitHub Actions, GitLab CI/CD) to automate deployment, testing, and monitoring.
 - Managed **cloud storage solutions**, including **Amazon S3, heroku and render**, ensuring efficient file handling and backup strategies.
 - Configured **load balancers, API gateways, and reverse proxies** (Nginx, Apache) to distribute incoming traffic efficiently and enhance application performance.
 - Ensured application **high availability and disaster recovery** by implementing **backup strategies, failover mechanisms, and auto-scaling policies**.
 - Integrated various **third-party services and APIs**, such as **payment gateways (Stripe, PayPal, Razorpay), email services (SendGrid, Mailgun), and SMS/notification services (Twilio, Firebase Cloud Messaging)**.
 - Developed **WebSockets and real-time communication features** using **Socket.io** for interactive applications like chat systems and live notifications.
 - Worked on **data synchronization and background processing** using **Redis queues**, to handle high-volume data processing efficiently.
 - Designed and developed **OAuth-based third-party login integrations** (Google, Facebook, LinkedIn, GitHub) for seamless user onboarding.
 - Automated deployment and infrastructure provisioning using **Terraform and Ansible**, ensuring consistent and repeatable setups.
 - Implemented **containerized development environments** using **Docker Compose**, improving local development efficiency and reducing dependency conflicts.
 - Managed **log rotation, resource allocation, and cost optimization** strategies to maintain an efficient cloud infrastructure.
 - Designed **API documentation** using **Postman, and API Blueprint** to facilitate easy integration by frontend and third-party developers.
-

Python Developer / Software Engineer

Teltek Systems | August 2015 – Feb 2018

- Designed, developed, and optimized **high-performance** Python applications tailored for data processing, financial analysis, and scientific computing.
- Leveraged **NumPy, Pandas, and SciPy** to handle large-scale numerical computations, statistical modeling, and data manipulation efficiently.
- Developed **multi-threaded and multi-processing applications** to ensure faster execution of compute-intensive tasks.
- Implemented **asynchronous programming** using Python's **asyncio** to enhance application responsiveness and efficiency.
- Created **custom Python modules and libraries** for data transformation, validation, and analysis to be used across various projects.
- **Integration of Python Backends with .NET and Java-Based Microservices:**
- Developed **RESTful APIs** in Python to seamlessly integrate with **. Java-based microservices** in a distributed system.
- Utilized **FastAPI and Flask** for creating scalable and high-performance API endpoints.
- Established **secure authentication mechanisms** (JWT, OAuth2) for communication between microservices.
- **Data Processing Pipelines for Large-Scale Datasets:**
- Implemented **data validation, cleansing, and transformation algorithms** to ensure **data integrity and quality**.
- Created **data aggregation models** for real-time dashboards and reports.
- **Deployment & Cloud Infrastructure Management:**
- **Containerized applications** using **Docker**, ensuring portability and consistency across development, testing, and production environments.
- Established **CI/CD pipelines** using **Jenkins, GitHub Actions, and GitLab CI/CD** for automated testing, building, and deployment.
- Developed **API documentation** using **Swagger and Postman** for seamless integration with front-end and third-party services.

- Optimized SQL queries and implemented **database indexing and partitioning** for improved query performance in **PostgreSQL and MySQL**.
 - Designed **real-time data streaming applications** using Apache Kafka and Spark Streaming for handling massive data influx.
 - Automated **infrastructure provisioning** with Terraform and Ansible to streamline deployments.
 - **Led a team of developers** to design, build, and deploy **enterprise-level applications**, ensuring high scalability, performance, and security standards were met.
 - **Defined project roadmaps, timelines, and deliverables**, ensuring alignment with business objectives while maintaining agile development practices.
 - **Facilitated daily stand-ups, sprint planning, and retrospectives**, fostering a culture of collaboration and continuous improvement.
 - **Managed cross-functional collaboration** with UI/UX designers, backend engineers, QA teams, and product managers to ensure seamless integration and optimal user experience.
 - **Conducted in-depth code reviews**, ensuring adherence to best coding practices, design patterns, and maintainability standards.
 - **Led architecture discussions and decision-making**, defining scalable and modular system designs using microservices and serverless architectures.
 - **Implemented software design patterns** such as MVC, MVVM, and repository patterns to improve codebase maintainability.
 - **Improved CI/CD pipelines** by integrating **GitHub Actions, Jenkins, and Docker**, reducing deployment time and ensuring seamless automated testing and deployment..
 - **Optimized cloud-based deployment strategies** with **AWS (Lambda, ECS, EC2,)** ensuring cost-efficient and highly available systems.
 - **Mentored junior developers**, conducting hands-on training sessions on **best coding practices, software architecture, and debugging techniques**.
 - **Led internal workshops on web security**, covering **data encryption, secure authentication, and penetration testing techniques** to enhance application security.
 - **Provided training on DevOps best practices**, including **containerization with Docker, Kubernetes orchestration, and CI/CD automation**.
 - **Encouraged a culture of learning** by organizing **knowledge-sharing sessions, hackathons, and technical deep dives** into emerging technologies.
-

EDUCATION

Bachelor's Degree in Business Administration - Project Management and Business Analytics
Towson University

CERTIFICATIONS

- Microsoft Office Excel 2016
 - Hubspot
 - ITIL V3
-

SOFT SKILLS

- ✓ Leadership & Team Management / Cross functional collaboration
- ✓ Problem-Solving & Analytical Thinking
- ✓ Technical Communication & Collaboration able to break down complex concepts
- ✓ Agile & Scrum Methodologies / Strategic thinking and adaptability
- ✓ Technical Documentation & Code Reviews / Project Ownership
