

Henry Matt

FULL STACK ENGINEER | PYTHON | SCALABLE MICROSERVICES, ETL PIPELINES

512-678-5089 henry.matt9010@gmail.com Brooklyn, New York, United States

SUMMARY

A full stack engineering professional with over 7 years of experience in designing scalable microservices and creating efficient ETL pipelines, expert in Python and React.js. My key achievements include enhancing application scalability through the integration of Kubernetes with Docker containers and optimizing system reliability via microservices design. I am poised to contribute to maintaining high standards of technical excellence and overseeing projects' success.

EXPERIENCE

Full Stack Engineer

Remote

Consignor Connect

05/2021 - Present

- Developed scalable backend services and APIs using Python frameworks include Django, Flask, and FastAPI
- Designed and implemented RESTful and GraphQL APIs, integrating with both SQL (PostgreSQL/MySQL) and NoSQL (MongoDB/Redis) databases
- Built microservices architecture using Flask/FastAPI, enabling modular deployment and improved system resilience
- Utilized Django ORM and SQLAlchemy for database modeling, migrations, and complex query optimization
- Implemented asynchronous tasks using Celery and message brokers like RabbitMQ and Redis
- Wrote comprehensive unit and integration tests with Pytest and Unit test to ensure high code quality
- Automated build, test, and deployment pipelines using GitHub Actions, Jenkins, and Docker
- Contributed to frontend features using JavaScript and TypeScript, creating reusable React components with functional programming patterns.
- Deployed and monitored services on AWS (EC2, S3, RDS, Lambda) and/or GCP (Cloud Functions, App Engine)
- Implemented OAuth2 and JWT-based authentication systems for secure user access
- Built and maintained RESTful APIs for internal and external use, ensuring security and performance
- Orchestrated deployment pipelines using Docker and Kubernetes to ensure zero-downtime releases
- Developed data processing workflows handling millions of transactions daily using Kafka and RabbitMQ
- Led team-wide code reviews and implemented best practices for clean and maintainable code
- Implemented scalable ETL pipelines for large-scale data processing using Apache Spark and Airflow

Software Engineer

03/2018 - 04/2021

Sikich

- Created robust backend services in Python and Go, supporting high-traffic web applications
- Assisted in the development and maintenance of backend APIs using Python and Django
- Shadowed senior developers to understand DevOps practices, CI/CD pipelines, and cloud deployments
- Collaborated with senior engineers to troubleshoot bugs and implement minor features or fixes
- Wrote simple RESTful endpoints and integrated them with frontend or third-party services
- Created and ran unit tests using Pytest and Unit test to ensure functionality and prevent regressions
- Participated in code reviews to learn best practices and improve code quality
- Documented new code, scripts, and APIs to support team collaboration and future development
- Built basic UI components using React.js and styled them with CSS modules or Tailwind CSS
- Worked with SQL (PostgreSQL/MySQL) to perform basic queries, joins, and data migrations
- Used Git for version control and participated in pull request workflows using GitHub/GitLab
- Wrote comprehensive technical documentation for all developed systems
- Enhanced data security protocols, ensuring compliance with GDPR and CCPA standards

SKILLS

Python, Flask, FastAPI, Django, Agile, Machine Learning, Airflow, Apache, Apache Spark, API, API Design, APIs, Automated Testing, AWS, CI/CD, Data Engineering, Cypress, Deployment Pipelines, DevOps, Docker, ETL, ETL Pipelines, Front-end, GCP, Git, Hadoop, Javascript, Kafka, Kubernetes, Microservices, OLAP, Microservices Architecture, MongoDB, MySQL, Performance Testing, PostgreSQL, Postman, Predictive Analytics, Pytest, PyTorch, RabbitMQ, React.js, Azure
