Senior Windows Engineer

Resourceful and solution-focused technology professional with experience maintaining and solving technical problems with Microsoft Windows Server and its surrounding technologies. Proven track record collaborating with Windows management, assessing user needs, developing solutions for user problems, handling project requests, running account audits, and creating or updating documentation. Known for technical skills, leadership, problem-solving orientation, reliability, self-motivation, teamwork, and documentation. Demonstrates high creativity in approaching problems and producing unique solutions.

Core Competencies

Security | Server Hardening | Backups | Disaster Recovery | Documentation | Teamwork
Strict Change-Control Environments | Hardware, Software, IP Troubleshooting | Leadership

Technical Proficiencies

Microsoft Windows Server & Client, AD, DNS, GPO, LDAP, PowerShell, IIS & Tomcat; SSL/TLS; MSCS, SQL & Availability Groups, SCOM, SCCM, VMware ESXi, GitHub, Octopus, HP ProLiant, Dell PowerEdge, Wireshark, Splunk, Java, Dell/EMC fiber-attached storage, VB.NET programming, HP iLO & Dell iDRAC, ServiceNow, SharePoint, switches, firewalls, operational readiness.

Experience

Dexian, Remote

March 2024 to November 2024

Windows Systems Engineer

Windows engineer for a team that oversees Active Directory, Windows patching, and troubleshooting for a large variety of Windows-related incidents. Deployment of new Windows servers using IaC (Infrastructure as Code).

- Built new VMware ESXi Windows Server VMs using Powershell-produced YAML files via Terraform.
- Performed required AD, DNS, and LDAP work to effectively implement and enforce secure settings.
- Troubleshooting of SSL/TLS handshake issues using Splunk and Wireshark.
- Developed many Powershell scripts to quickly deploy & update Active Directory groups and users.
- Maintained a team knowledge base using Confluence.
- Software deployment and patching using Microsoft Configuration Manager (SCCM).
- Upper-environment work performed within a change-control process using ServiceNow.
- Coordinated racking, cabling, and setup for Dell PowerEdge servers with Dell/EMC fiber-attached storage; Dell iDRAC management.

Fiserv Inc. - Hillsboro,OR and Remote

April 2002 - December 2023

Advisory Windows Systems Engineer (September 2022 - December 2023)

Lead-engineer work on projects and consulting-level expertise to senior Windows engineers, with similar projects on the same team as previous position.

Staff Systems Engineer (March 2015 - September 2022)

Lead Windows engineer for a variety of fintech-related projects, including card services, bill-payment solutions, and lending solutions. Several OS- and SQL-upgrade projects, typically as forklift upgrades.

- Built new Windows Server systems as both VMware ESXi VMs and Dell PowerEdge physicals.
- Performed required AD, DNS, GPO, and LDAP work to effectively implement and enforce secure settings.
- IIS hardening, configuration, security, and troubleshooting.
- Firewall analysis and troubleshooting using Splunk, Portqry, PowerShell.
- Set up fiber-attached storage.
- Developed PowerShell code to locate server vulnerabilities and flag/remediate them.
- Server vulnerability scanning and hardening using Nessus and Tanium.
- Troubleshooting of SSL/TLS handshake issues using Splunk and Wireshark.
- Developed PowerShell scripts for software installation and server hardening.
- Tomcat and Java configuration and troubleshooting on Windows Server to support online banking, lending, card-services applications.
- Created and maintained a team knowledge base using SharePoint plus OneNote.
- Specified and tested monitoring of critical servers and services using SCOM and SiteScope.
- Software deployment and patching using Microsoft SCCM & SCOM (MCM/Intune).
- Coordinated CI/CD deployments with developers to on-premise Pivotal Cloud Foundry using GitHub.
- Performed all work within a strict change-control process for upper environments using ServiceNow.

Systems Analyst, Systems Engineer, Senior Systems Engineer (April 2002 - March 2015)

During this period, Fiserv acquired CheckFree Corp. which had previously acquired Corillian Corp. Operated, maintained, upgraded four sizeable hosted online banking systems in local datacenter.

- Designed and built HA hardware for a new online-banking product; designed and built an EqualLogic iSCSI SAN-based system for this. Implemented MSCS with multiple, clustered SQL nodes; implemented out-of-state DR with remote administration using HP iLO.
- Development of in-house online-banking monitoring application in VB.NET
- Troubleshooting of SSL/TLS handshake issues.
- Tomcat and Java configuration and troubleshooting on Windows Server to support online banking, lending, card-services applications.
- Extensive work on configuring and securing IIS in a Cisco CSS load-balanced environment; configuring Active Directory, DNS, GPOs, and LDAP; PowerShell scripting.
- Managed a physical server & VM development environment on HP ProLiant (later Dell PowerEdge in later years) using MS Virtual Server; backups and deployments using Acronis.

Education**Bachelor of Science (B.S.), K-12 Music Education, Computer Engineering**

Oregon State University, Corvallis, OR
