

GREGORY ALWAY

5124 Fallen Leaf Dr, Riverview, FL • 947-221-0414 • alwaygregory@gmail.com

SUMMARY

Accomplished Software Engineer with over 10 years of experience working with leading consulting firms to deliver tailored, innovative, and efficient technical solutions. Proficient in designing and implementing robust systems using technologies like **.NET Core**, **SQL**, **Angular**, **AWS**, and **Azure**. Adept at analyzing complex requirements, resolving technical issues, and collaborating with clients to drive business success. Skilled in Agile practices, DevOps methodologies, and technical mentorship to enhance project outcomes and team performance.

ADDITIONAL INFORMATION

- **Programming Languages:** C#, JavaScript, TypeScript, Python, SQL
 - **Frameworks & Libraries:** .NET Core, Angular, React, Entity Framework, Bootstrap, jQuery
 - **Cloud Platforms:** AWS (Lambda, EC2, S3, RDS), Azure (DevOps, WebJobs)
 - **Databases:** SQL Server, Oracle, NoSQL, DynamoDB
 - **DevOps Tools:** Jenkins, Azure DevOps, Docker, Kubernetes
 - **Testing Tools:** NUnit, xUnit, Selenium, Mocha
 - **Other Tools:** Jira, Confluence, Git, WCF, Telerik
-

WORK EXPERIENCE

Senior Software Engineer, Accenture

June 2022 - Present

- Directed a comprehensive modernization project to refactor legacy applications, improving system reliability, user experience, and overall maintainability through strategic code restructuring and proactive monitoring.
- Migrated monolithic **.NET 4.8 Web Forms** applications into a modular microservices architecture, significantly enhancing scalability and reducing development time for new features.
- Developed and deployed Azure DevOps pipelines for continuous integration and deployment (CI/CD), ensuring faster and more reliable application releases while minimizing manual intervention.
- Designed and implemented background synchronization services using **Azure** Webjobs to facilitate nightly data sync between critical systems, improving operational consistency and accuracy.
- Led a team of five engineers in the development of a talent marketplace application, managing B2B and B2C workflows to streamline top-of-funnel acquisition and onboarding processes.
- Oversaw the complete redesign and rewrite of mobile-friendly applications, increasing mobile go-live rates by 15% and ensuring alignment with modern usability standards.
- Mentored junior developers in full-stack development practices, providing hands-on guidance in best practices, design patterns, and technical problem-solving to build team expertise.
- Created and maintained high-performance APIs and services, integrating seamlessly with third-party tools to ensure efficient data exchange and interoperability across platforms.

Software Engineer, H2O.ai

March 2018 - June 2022

- Led the migration of seven on-premise applications to AWS, achieving an increase in system uptime from 90% to 99.9% by implementing robust failover mechanisms and advanced monitoring tools.
- Spearheaded the modernization of backend APIs, transitioning from outdated **gRPC/SOAP** protocols to REST, leveraging AWS's scalability to enhance application functionality and efficiency.
- Engineered infrastructure-as-code solutions that reduced deployment times by 90%, decoupled applications from monolithic structures, and modernized the **CI/CD** pipeline for seamless integrations.
- Designed and deployed scalable applications capable of processing peak loads of 1,500 requests per second with transaction times consistently under SLA requirements of 0.3 seconds.
- Developed inventory management systems for over 10 businesses using **SQL**, **Oracle**, and **CSS**, reducing operational inefficiencies by 25% and enhancing workflow transparency.
- Enhanced e-commerce websites by integrating **C#** and **HTML5** technologies, leading to a 15% increase in customer transaction rates through improved user experience and performance.
- Directed the design and implementation of responsive, user-friendly web interfaces, which boosted client online engagement by 30% and reinforced brand loyalty.
- Automated employer demo scheduling processes, resulting in a 60% reduction in qualification time, while increasing organic leads by 50% through data-driven A/B testing initiatives.

Full Stack Developer, DataRobot

June 2014 - March 2018

- Analyzed and successfully resolved over 200 low and medium support incidents, identifying root causes and ensuring the optimal functionality of production **SQL** databases to prevent recurring issues.
- Designed and implemented trace logging enhancements that reduced error messages by 150,000 daily across 30 distribution centers, significantly improving system reliability and operational efficiency.
- Developed automated cron job scripts to monitor critical services proactively, ensuring continuous uptime by detecting and restarting inactive services before they affected operations.
- Built dynamic and responsive web applications using **ASP.NET Core** for backend processes, **Bootstrap** for styling, and **Entity Framework** for seamless database integration.
- Created a custom **WCF** service to enable in-house telemetry tools to target static REST URLs, abstracting **SQL** queries and connection strings into a unified, maintainable framework.
- Automated data gathering and reporting workflows by developing tools to generate CPU/GPU performance graphs within seconds, streamlining analysis and decision-making.
- Designed visual dashboards using **AngularJS**, **WCF**, and **SQL**, which provided actionable insights into under-tested features for AAA video game production, improving testing coverage.
- Reengineered test suites in **C#** to reduce data overhead and file input/output by 90%, optimizing performance testing and expediting feedback loops.

EDUCATION

Bachelor of Science in Computer Science
University of South Florida

August 2010 - June 2014
