Visa Status: Green Card

Email: hameed.netdev215@gmail.com

Phone:6468471661

Summary:

- 10+ years of experience in Designing, Developing Enterprise-wide applications and product development life cycle projects using cutting edge technologies in N-Tier and Service Oriented architectures.
- Solid technical background developing intranet, internet, N tier and Client Server applications of .NET Object Oriented Programming using ASP.NET, C, SQL Server 2008/2012, MVC, WPF, WCF, Azure Cloud, Azure HDInsight and ML Studio and performance optimization tools and technology.
- Worked on various architectures like MVC4/MVC5, SOA, and Multi-Tier.
- Worked extensively with Site core 6.6 Content Management System CMS
- Experience with HTML5, CSS3, JavaScript, jQuery, Mobile, AJAX, JSON, and emerging web technologies.
- Experience with JavaScript frameworks such as AngularJS and Backbone.js.
- Experience in XML related technologies including XML, XSD and XSLT.
- Experience in developing UML diagrams including Use Case diagrams, Class diagrams, Interaction diagrams, State diagrams and Deployment diagrams.
- Excellent experience in creating consuming Web services SOAP, WSDL, DISCO, UDDI, .NET Remote Server Components using .NET Framework, to develop Service Oriented Architecture SOA based application.
- Strong database design and programming experience. Strong skills in writing Stored Procedures, Triggers, User Defined functions using SQL PL/SQL in SQL Server 2012/2008/2005.
- 8 years iterative software development methodologies e.g. RUP, Agile, Scrum, etc.
- 2 years of multi-platform mobile development experience combining development, testing and troubleshooting. Understanding of Java EE, and Mobile architecture and components.
- Strong understanding of Mobile Application Security issues and methods of resolution.
- Developed Data Access Layer DAL, Business Logic layer BLL also in implementing Business Processes, Abstract factory as part of Service Oriented Architecture SOA.
- Experienced in SharePoint 2013 application and workflow development using Visual Studio, including source code management using Team foundation server TFS.
- Understanding of IIS web servers, web server/application configuration, web-farm load balancing operations including SSL off-loading, SSL acceleration and content caching and disaster recovery topologies.
- Experience working with ORM tools like NHibernate and Entity Framework.
- Design and development databases using SQL Server 2005/2008. Developing Reports using SQL Server Reporting Services SSRS, SQL Server Integration Services SSIS. Developing SSIS packages and designing ETL processes.
- Experience in Client-Side Reporting Service RDLC.
- Experience with Test-Driven Development TDD and Domain Driven Model DDD.

- Proven ability in generating Drill down and Drill through reports with Drop down menu option, sorting the data, defining subtotals in SSRS.
- Experienced in Performance tuning of Stored Procedures, SQL statements and improving the response time of web pages.
- Experienced in developing User Controls and Custom Controls in C and ASP .Net.
- Experienced in all phases of SDLC. Involved in Project Planning, Analysis, Design, Development, Documentation, Implementation, Testing and Support of software applications.
- Solid experience in developing WCF Services using C, SOAP, UDDI and XML.
- Actively involved in Migrating applications from Dot Net 2.0 to Dot Net 4.0, classic to Azure cloud and AWS deployment
- Hands-on experience using MS Visio and ER-win tools for OOAD and Database modeling.
- Experienced in Integrating 3rd party software like Telerik, Kendo UI Chart, XML Pdf, twitter API, Facebook API, PayPal, MS CRM 2011 with Dot Net applications.
- Experience in Unit testing using Nunit.
- Hands on Experience in mobile development using Xamarin and Windows Mobile SDK.
- Proficiency with integrating Payment Gateways PayPal, Verisign.
- Ability to manage multiple projects and tasks simultaneously in a high-pressure environment.
- Strong multitasking and prioritization, analytical and organizational skills.
- Ability to work independently with minimum supervision or work in a team-oriented project.
- Excellent written, verbal communication, and customer service skills.
- Strong project management, risk assessment, organizational, and interpersonal skills. And possess a high level of drive, initiative and self-motivation.
- A collaborative personality who enjoys working in a team-oriented environment.
- Excellent debugging skills. Able to debug complex technical issues including multiple system components.
- Collaborate with executives to discover their business needs and architect and create business solutions.
- Excel at creating and putting forward informative, persuasive, executive-facing presentations addressing best practices, business process change, and visualization of proof of concepts.
- Passionate about listening to executive-level business issues and then architecting and implementing solutions including business process change.
- Highly creative and articulate. Can adapt quickly to rapidly changing conditions.

TECHNICAL SKILLS:

- **.Net Technologies:** ASP.NET, VB.NET, C#, ADO.NET, WCF, WPF, LINQ, Entity Frameworks, ASP.NET MVC.
- **Languages:** C, C#, VB.
- **Scripting Languages:** Java Script, VB script, jQuery, Angular JS, Angular 2, Type Script, Gulp JS, Node JS, React JS, Ext JS
- **Web Technologies:** ASP, XML, XAML, XSD, XSLT, Angular JS, JSON, HTML 5, CSS, Bootstrap, SCSS.
- **Web Services:** IIS, IBM Web Sphere, REST, SOAP.
- **Version Controls:** Team Foundation Server (TFS), SVN, Visual Source Safe (VSS).
- **Development Tools:** Microsoft Visual studio 2012/2010/2008/2005, Microsoft Visual Basic 6.0, C#, Java Script, N-Hibernate.
- **Database:** Microsoft SQL Server, Oracle, IBM DB2, Mango DB.

Education Details:

Bachelors in Computer Science in 2013.

Professional Experience.

Calcfocus, New York

Jan 2024 - Present

Sr. Dot Net Developer

Roles & Responsibilities:

- Extensively worked in debugging both .NET Client Application and ASP.NET applications to identify and analyze defects.
- Involved in calling and sending message to web service asynchronously because of long network latency, developing handler for web service call when it is completed.
- Involved in developing object-oriented PowerShell, typescript and experienced with AJAX, JSON, HTML, and CSS.
- Worked in security models like OAuth, Certificate security and basic authentication.
- Implemented Application logging frameworks is required.
- Designed and implemented standard Identity and Access Management (IAM) platforms like Okta to build SSO solutions with protocols like SAML, OAuth, and OIDC.
- Worked with Entity Framework and Unity/Injects as DI container.
- Worked as Development POCs as needed at every level of application development.
- Developed and maintained applications using .NET technologies and Power Apps, ensuring high-performance and scalability.
- Designed, developed SOA Web Services using WCF Services with .NET 7, C#.NET and Hosted on IIS and Unit tested with MS Unit Framework, C#.
- Developed test-driven development (TDD) strategy guiding use of the N-unit testing framework.
- Utilized Unit to develop comprehensive testing frameworks, ensuring the reliability and effectiveness of the software solutions.
- Implemented Redux Saga's with actions and reducers to implement a sync API call.
- Made use of redux saga middleware to access redux application state and dispatched redux actions.
- Created React JS components using JSX and followed the FLUX design pattern for unidirectional data flow.
- Involved in setting up the applications in Okta and configuring them to use the appropriate protocol (SAML, OAuth, or OIDC) for authentication and authorization.
- Developing ADF (Azure data factory) pipelines for loading to Azure storage & developing Power BI reporting.
- Developed enterprise applications using React.js and Redux with Graph on server side.
- Architected and developed Blazor client side and server-side apps.
- Implemented Business Driven Development BDD techniques using Cucumber in Spec Flow and Selenium WebDriver for testing automation.
- Deployed the web interface applications using Azure App Service.
- Successfully deployed and managed multiple releases of the web forms application, ensuring continuous integration and delivery using Azure DevOps.
- Designed and developed presentation layer with Web Application and Win Forms, C#.NET as code behind language.
- Develop Sign Generation Engine and improved throughput using OOP and async programming (.NET Task Parallel Library async/await) in web/windows services.

- Developed and tested new Facility site (Angular project using redux pattern with NRx and .NET core micro services backend).
- Collaborated with clients to gather requirements and define project scopes, ensuring alignment with industry best practices and FHIR guidelines.
- Developed data mining algorithm from energy bill data using RDBMS and .Net technologies.
- Built the integration and worked with FACETS claims and developed the WCF web services to integrate TriZetto FACETS and consumed them.
- Implement the deal finder algorithm using C#.Net 4.5 and TPL.
- Heavily SQL programming and development using MS-SQL 2008 & 2012 and Oracle recent versions.
- Worked with relational 3NF database structures.
- Involved in Bug life cycle and Production support to fix the bugs.
- Worked with software component vendors to enhance functional features.
- Analyzed and created a Detailed Design Document for various components in FACETS implementation.
- Worked on consuming the upstream on prem data to Azure cloud platform using Azure Event Hub
- Deployed the services in Azure Kubernetes Services and in Open Shift Cloud Platform environments.
- in containerized applications deployment using Azure CI/CD pipeline.
- Implemented Data extraction and streaming using Kafka.
- Developed the cronjob to schedule the services for daily data consumption.
- Tested the Azure events hub events using client service program to validate the data.
- Experienced in deploying applications using Open Shift command line tool and Linux containers.
- Developed triggers for data access using PL/SQL.
- Facilitated group design and collaboration sessions to elicit complex information on SDLC topics.
- Worked in building React Components for the React application and used React Hooks, Forms, Events, React Router, Flux and native React concepts.
- Using Azure Cloud services performed various web operations in Azure App Service.
- Created selectors to get observable data from NGRX store and used reducer functions to set/update store state.

Environment: Visual Studio 2019, .Net Core 3.0 Framework, C#.Net, HTML5, Entity Framework 6, Agile, Web services, AJAX, Windows 10, Angular 13, Reacts, JavaScript, CSS3, SQL Server 2016, Bootstrap, Web API, IIS 7.0, jQuery, WCF, TFS 2017, GitHub, Source Tree, Azure, WPF, MVVM, PL/SQL, PRISM, KAFKA

Big Lots, Columbus OH

Nov 2022 –Dec 2023

Sr. Dot Net Developer

- Integrated SharePoint and other web applications with MS CRM by using I Frame and MS CRM Web Services.
- Worked with a team of 8.
- Collected usage data from various cloud applications in different data centers using python programs.
- Implemented Data validations using python.
- Deployed the web application in the HFE pre-production and production environment using Azure App Service.
- Developed sample BDD tests by writing behaviors, step definitions and feature files using Gherkin.
- Used React .JS in development of the web application to bind the data/model that is being retrieved from a database through services provided in a controller to the view using scope.

- Responsible for day-to-day management of all development and Test Various .Net 6 based enterprise applications.
- Developed data driven applications with power apps to show weekly offshore transactions.
- Build stable React components and stand-alone functions to be added to any future pages.
- Designed the data schema and mapping for Elastic search indices based on the requirements of the application. Defined the fields, data types, and analyzers to optimize search and retrieval.
- Implemented user authentication and authorization features using ASP.NET Core.
- Developed comprehensive design documents based on finalized requirements and oversaw the change request process, coordinating with other teams as necessary.
- Implemented Azure Application Insights to store user activities and error logging.
- Implemented client-side Interface using React JS.
- Provide production support via detail-oriented application troubleshooting.
- Written code to index and ingest data into Elastic search. Involved in transforming and mapping data from various sources, such as databases or log files, into the appropriate format for indexing in Elastic search.
- Led technical design and code reviews to ensure code quality and adherence to coding standards.
- Utilized Angular 12 to develop, test, deploy, and maintain front-end components for web applications.
- Developed various RESTful Web API services using Web API 2.0 along with middle tire which communicate with Database Cosmos DB, Blob and SQL Database.
- Implemented a REST-based microservices architecture in Azure Cloud, utilizing Terraform scripts for infrastructure as code and configuration as code.
- Involved in developing and maintaining performance test plans, which outline the scope, objectives, and approach for performance testing web applications using JMeter. Involved in working with stakeholders to identify key performance indicators and user scenarios to be tested.
- Configured and executed performance tests using JMeter to measure the performance and scalability of web applications under different loads and conditions. Involved in testing a variety of scenarios such as concurrent user loads, long-duration stress tests, and peak load tests.
- Configured global Store for the entire application and used Redux for state management.
- Managed multifactor authentication and single sign-on for secure application access.
- Ensured code compliance with HIPAA, PHI, and PII regulations and used Azure Data Lake Store to analyze large workloads. Implemented data transmission protocols and mechanisms to securely transfer telematics data to the EHR system.
- Implemented Unit Test by using Jasmine and Karma throughout application development phase.
- Processed incoming telematics data, transforming it into a format compatible with the EHR system, and ensuring data integrity and accuracy.
- Designed and implemented Azure Event Hub to move on-premises data to the Azure cloud platform.
- Orchestrated ETL operations for efficient data movement between connectors using Azure Data Factory
- Deployed services to Azure Kubernetes Services using Azure CI/CD pipeline and containerized applications.

Environment: C#, WPF, XAML, Visual Studio 2015, GitHub, Agile Scrum, Restful API, Version1, Dependency injection, VB6.net, NET 2013, SSIS, Castle Windsor, NET Framework 5.0/4.0 MEF,

McKesson Corporation, Irving, Texas
Senior Dot Net Developer

Jan 2021- Oct 2022

- Involved in different phases of the SDLC including requirement analysis and architectural design using agile methodologies.
- Worked on writing design documents once requirements are finalized and signed off by stakeholders.
- As a .NET developer with experience in Sec DevOps, I have worked on implementing security practices and tools throughout the software development lifecycle.
- Designed the Web Pages using HTML, CSS, JavaScript, React JS, XML, JSON and AJAX.
- Part of the application architecture group, handling all architectural concerns for the modernization of Rest APIs on Azure platform using Microsoft ASP.net Core implementation.
- Organized Git repositories on Azure Dev-Ops portal, contributed to the development of solution components, development of private NuGet Packages, developing build and release pipelines, and maintaining code quality through SonarQube and Veracode scan.
- Actively contributed to code quality at the organization level and optimized build and deployment timings.
- Created middleware component classes and WCF services across the enterprise and integrated them into UI using MVVM pattern in Prism framework.
- Worked in setting up processes on batch servers, migrating UI applications to Citrix, creating code for Voltage changes/Logging Enhancements, submitting CA7 scheduling requests, and unit testing the applications based on the finalized plan.
- Optimized the performance of Elastic search queries and indexing operations. Involved in Elastic search configurations, utilizing caching mechanisms, and optimizing search relevancy using features like scoring and boosting. Additionally, monitor and scale Elastic search clusters to handle increased data and query loads.
- Prepared the Unit Test Case documents and completed the Unit Testing.
- Involved in iterative, test-driven, and SCRUM methods of agile Methodology.
- Coded business logic and database logic using Entity Framework 6 and Repository Pattern. Used Entity Framework code-first approach and LINQ to the entity for data access.
- Worked with Angular 9 CLI for creating, developing, serving, and testing the application.
- Created Typescript reusable components and services to consume REST API's using a Component-based architecture provided by Angular 9.
- Implemented multifactor authentication (MFA) and single sign-on (SSO).
- Built a new E-commerce application from scratch, followed Code First, created a new model for Entities, and wrote a mapping for these Entities based on UML diagrams/Design architecture. Extensively used SOLID principles in implementation.
- Developed required Entity Models and used SQL server 2018 as a relational database for the database to get fast and responsive data for the users and upgrading data in the databases.
- Created a controller and its endpoints using Web API methodology of different HTTP verbs in developing Web services.
- Created RESTFUL services using Web API, built HTTP services, and formatted responses using web API media type format to JSON.
- Implemented token-based authorization to the service endpoint.
- Integrated several third-party tools like Sale Force Service and Bright Cove service into the application.

- Created Email notification service endpoint and was involved in designing email HTML templates.
- Created/Modified Stored Procedures, Triggers, and Views in SQL and effectively used them within the application and developed complex SQL queries.
- Developed controller and service methods using TDD (Test Driven Development) methodology and developed unit and integration tests using Xunit and NUnit frameworks.
- Worked with a distributed version control system/Subversion called GIT and comfortable with feature branches, rebasing, and merging.
- Developed stored procedures and functions for data access using PL/SQL.
- Worked on the SQL Server to Azure SQL migration pipeline and architected and implemented the MongoDB to Cosmos DB migration pipeline.

Environment: ASP.NET 4.5, C#, VBA, .NET, HTML5, CSS3, MVC, JavaScript, SQL, T-SQL, Puppet, win CVS, XML chocolatey, AJAX, JSON, jQuery, AngularJS, Bootstrap, GitHub, Postgres SQL, SPS, Restful Web API,

CIGNA, Bloomfield, Connecticut
Dot Net Developer

Nov 2019- Dec 2020

- Debugged both .NET Client Application and ASP.NET applications to identify and analyze defects.
- Developed and maintained Restful services and Web APIs.
- Ported the application to Azure using Microsoft Service Fabrics.
- Implemented security models like OAuth, Certificate security, and basic authentication for the application.
- Conducted application security scans and provided remediation solution approaches.
- Implemented Application logging frameworks using Log4Net.
- Maintained the application using ASP.NET MVC, C#, Bootstrap, Knockout JS, and Angular 6.
- Implemented Business Driven Development BDD techniques using Cucumber in Spec Flow and Selenium WebDriver for testing automation.
- Developed POCs at every level of application development.
- Worked extensively with AJAX and jQuery.
- Utilized LINQ to query data as an asset.
- Designed and developed several Middle-Tier components to implement the Business rules.
- Provided 24x7 on-call support for production and development systems for both SQL and NoSQL databases.
- Worked closely with the business team to understand the customer requirement before release planning and create JIRA tasks for development.
- Worked with Scrum master and release train manager to divide the tasks into smaller tasks, Estimation and assignments.
- Setup automation framework using Spec Flow (.NET cucumber) BDD approach.
- Used Scrum as a development methodology, participated in Daily Scrum meetings, Sprint Planning and
- Retrospective, and other Agile meetings.
- Worked on creating a design document for several features and got it reviewed by various stakeholders and finalized it for the implementation.
- Worked on code reviews and helped the team to unblock them from any technical blockers.
- Participated in ongoing discussions for backlog grooming.

- Worked on automating security tasks and processes using tools such as Ansible and Terraform to improve efficiency and scalability using Sec Devops.

Environment: Visual studio, .NET, SOAP & Restful Services, JSON, Framework, Angular 2, MS.NET Framework 4.5, Type Script, Node JS, ASP.NET, VB.NET, C#.NET, ADO.NET, IIS, WCF, WPF, AJAX, MVC, WCF, XML, XSL/XSLT, HTML5, SQL Server, TFS, SSRS, UNIT TESTING.

Lockheed Martin, Bethesda, Maryland

May 2018- Oct 2019

Dot Net Developer

Design and Development of Integration modules with third party credit bureaus, Loan safe using ASP.NET, HTML, Java Script and XML.

- Built a web service in mid-tier to get data from data layer and feed them to presentation layers ASP.NET Page, Window applications.
- Developed client programs to consume web services.
- Develop rich front-end UI using AJAX Controls, Silverlight 4.0, Expression Blend and XAML.
- Created web sites navigation by using Accordion feature in Ajax control tool kit.
- Created Grid view to display courses in a well-defined manner arranged in multiple tabs with sorting and paging.
- Customized Web controls in item template of the Grid view.
- Developed message center as a part of LMS to send messages between people and applications, to filter messages based on messages type, to show message counter.
- Used .net reflection to get class information and bind it to Data Table.
- Wrote triggers for table updating, deleting and loading historical data into history tables.
- Developed a web page which gives users ability to run External programs.

Environment: Microsoft ASP.NET 4.0/3.5, Visual C 4.0/3.0, Silverlight, LINQ, AJAX toolkit, Visual Studio 2010, TFS, WCF.

AmpcoSofttech, Hyderabad India

June 2013 – Feb 2018

.Net Developer

Responsibilities:

- Actively involved in all phases of Application lifecycle development following Agile Methodology.
- Involved in all the phases of the Software Project Life Cycle and also analysis of the system based on Multi-tier architecture.
- Worked on State Management Techniques in ASP.NET (Page Level, Session Level, Application Level) while developing the web applications.
- Developed the class libraries and generating the DLLs (Dynamic Link Library).
- Developed web-applications using ASP.NET MVC, C#, AJAX & JQuery.
- UI Design based on HTML5, CSS3, JavaScript, and JQuery, Bootstrap, Kendo UI Widgets, Web API and AngularJS.
- Developed various abstract classes, interfaces, classes to construct the business logic for SOLID principle using C#.
- Used LINQ to connect with the database.
- Worked on MS SQL Server Database to keep the transactions using the DML, DDL, and TCL Queries.
- Worked on ASP.NET Web Forms, Web Services, and XML to expose the reports to facilitate the information sharing.

- Experience in using Web API to create HTTP Restful services.
- Developed Tables, Stored Procedures, Triggers, and Views in SQL Server 2012 for accessing the database.
- Worked on TFS as Source Code Version Control Tool.

Environment: ASP.NET MVC 4, C#.Net, VB.NET, ADO.NET, LINQ, RESTful Services, WebAPI, HTML, CSS, JavaScript, JQuery, AngularJS, JSON, IIS 6.0, SQL Server 2012, Visual Studio 2010, .NET Framework 2.0/3.0/3.5, TFS.
