

Senior Full-Stack Engineer

Web & AI Development

Introduction

Experienced in building cloud-native applications using Golang, Python and React, with a focus on high-performance APIs, distributed systems, and real-time data pipelines. Proven success integrating AI services like ChatGPT and Hugging Face into scalable backend services and delivering seamless frontend experiences.

Skills

Languages	Golang, Python, JavaScript, TypeScript
Frontend	React, Next.js, Redux, Apollo, Jest, React Testing Library, D3.js, Chart.js
Backend	Golang, Gin, GORM, Fiber, Python, FastAPI, PyTorch, RESTful APIs, gRPC, PostgreSQL, Snowflake, RabbitMQ
AI Integration	OpenAI (ChatGPT API), LangChain, Hugging Face Transformers
Software Engineering	Microservices, Agile Methodology, Scrum
Platform & Tools	AWS (EC2, S3, Lambda, SageMaker), GCP, Databricks, Webpack, Vite
Soft Skills	Mentorship, Communication, Collaboration, Problem-solving, Adaptability, Time management

Professional Experience

Indr

Lead Software Engineer, Remote / March 2021 – Current

- Re-architected core backend services from **Python** to **Golang** using **Gin** and **GORM**, improving request throughput by 60% and reducing cold start time in **AWS Lambda** by 40%.
- Built real-time clinical dashboards in **React** with **D3.js/Chart.js**, powered by a **Golang** event-driven backend using **Redis** streams and **PostgreSQL** triggers.
- Integrated **OpenAI** and **Hugging Face APIs** into **Golang** services for generating contextual recommendations and automating patient intake triage.
- Designed asynchronous task queues using **Golang** workers with **RabbitMQ** for processing lab reports, cutting processing time by 50%.
- Managed infrastructure with **Docker**, **ECS Fargate**, and **GitHub Actions**-based **CI/CD** pipelines.
- Wrote unit, integration, and load tests using **Go's** testing, testify, and vegeta for stress testing critical endpoints.
- Collaborated with ML team to productionize models in **SageMaker**, exposing prediction services through lightweight **Golang**-based APIs.
- Automated ETL pipelines in **Python** using **Pandas**, **SQLAlchemy**, and **Celery** to ingest, transform, and sync

patient records across internal services and external APIs.

- Spearheaded migration to **gRPC** for internal microservice communication, improving latency by 35%.

Centrifuge

Senior Web3 Full-Stack Engineer, Remote / January 2020 – February 2021

- Developed high-performance backend services in **Golang** (Fiber) for DeFi analytics and cross-chain transaction logging.
- Built secure wallet authentication and transaction signing services in **Go**, with cryptographic libraries and **JSON-RPC** over HTTP.
- Automated **dApp** backend workflows using **AWS Lambda (Go)** for blockchain indexers and scheduled tasks.
- Built and consumed **Web3** APIs using **Gnosis**, **Ethereum** JSON-RPC, and IPFS within **Golang** and **React** applications.
- Synced decentralized data stores with **Redis** and **PostgreSQL** to ensure on-chain/off-chain consistency.
- Owned cloud deployment workflows with **GCP (Cloud Run, Pub/Sub)**, **Terraform**, and **GitHub Actions**.
- Led performance tuning across services by introducing structured logging, metrics collection (**Prometheus**), and real-time monitoring with **Grafana**.

Object Partners

Software Development Consultant, Chicago, IL / Jan 2012 – Dec 2019

- As a consultant, collaborated with enterprises, startups, and individual clients, delivering full-stack development solutions and managing CI/CD pipelines across diverse tech stacks, including **PHP**, **Python**, **Node.js**, **C#**, and **Java**.
- Built microservices with **Golang** and deployed to Kubernetes clusters for enterprise clients migrating from monoliths.
- Designed and implemented scalable, secure web applications using **Python Django**, **ASP.NET MVC**, and **RESTful APIs**, ensuring robust backend functionality and seamless integration with frontend systems.
- Led the successful migration from **RESTful APIs** to **GraphQL** for publicly supported APIs, improving data fetching efficiency and reducing over-fetching issues.
- Developed highly responsive, accessible, and reactive web and mobile applications using **React**, **React Native**, **Angular**, and **Vue**, delivering exceptional user experiences across platforms.
- Managed **CI/CD** pipelines using **Amazon Web Services (AWS)** and **Azure DevOps**, integrating cloud services, tracking issues, and optimizing application performance for scalability and reliability.
- Provided technical leadership and mentorship to team members, conducting code reviews, offering constructive feedback, and facilitating knowledge-sharing sessions to foster skill development and ensure top-tier deliverables.
- Leveraged **PHP** for legacy system enhancements, **Python** for scripting and automation, **Node.js** for real-time backend services, and **C#/Java** for enterprise-grade application development, showcasing versatility across technologies.

Education & Certification

BS in Computer Science, 2012, Pace University
