

Hima Bindu Mandadapu

St Louis, MO | PH: +1 636-445-2846 | Mail: himabindu2449@gmail.com

PROFESSIONAL SUMMARY:

- Experienced, result-oriented, resourceful and problem-solving Data Engineer with 7+ years of experience in IT.
- Around 7+ years of exposure of working in Software development/enhancement as Python Software Developer. 4+ years of experience in GCP, deployment of services using Node JS and as PHP Full stack development.
- Strong Experience in Zabbix Monitoring tool.
- Role includes ingesting of data, Python Development, services development and deployment, Python Testing, Customer Engagement, Cross-functional team coordination, Product enhancement, technical documentations and development etc.
- As a Data Engineer have experience in building, implementing, data warehousing solutions and optimizing data architectures using Cloud services.
- Hands-on experience in Google Cloud Platform (GCP) services, BigQuery, Dataflow, gsutil, Cloud Functions, GKE, Cloud Composer, Cloud SQL, Kubernetes Cluster, Secret Manager, Artifact Registry, Cloud Monitoring, Cloud Storage, Google Cloud Databricks, Cloud Workflows, and Cloud Logging.
- Hands-on experience in Azure Cloud Services, Azure Synapse Analytics, SQL Azure, Data Factory, Azure Analysis services, Application Insights, Azure Monitoring, Azure Data Lake, Azure Databricks, Log Analytics.
- Experience in data-warehousing applications design and data modeling, adept at architecting scalable storage solutions and creating efficient data models to support complex analysis and decision-making.
- Experience in Developing Spark applications using Spark - SQL, PySpark in Databricks for data extraction, transformation, and aggregation from multiple file formats for analyzing & transforming the data to uncover insights into customer usage patterns.
- Skilled in automating and orchestrating workflows using Apache Airflow, including designing, implementing, and managing complex data pipelines for efficient data processing and integration.
- Proficient in developing custom operators, sensors, and DAGs in Apache Airflow to meet business requirements, ensuring high availability and scalability of data processes.
- Experienced in monitoring and optimizing Airflow workflows to ensure performance, reliability, and timely execution of tasks within multi-cloud environments.
- Experience in implementing various Cloud Data Engineering, Data Warehouse, Data Visualization, Reporting, Data Quality, and Data virtualization Solutions.
- Experience in migrating on premise ETLs to Google Cloud Platform (GCP) using cloud native tools such as BIG query, Cloud DataProc, Google Cloud Storage, Composer.
- Experience in building and architecting multiple Data pipelines, end to end ETL and ELT process for Data ingestion and transformation in GCP and coordinating tasks among the team.
- Experience in implementing data management in Microsoft Azure, such as data quality, data governance, data security, data lineage, data cataloging, etc.
- Implemented Pyspark to extract, filter, and transform large-scale data sets using Azure DataBricks, optimized data processing pipeline, reducing processing time by 40% and increasing overall efficiency.
- Knowledge of the data requirements and design challenges associated with delivering data for finance management, finance reporting, supply chain management as well corporate performance needs.
- Collaborate closely with business partners to thoroughly comprehend their requirements for data transformation processes.

- Proven expertise in optimizing performance and vigilantly monitoring resource utilization.
- Implemented monitoring and alerting mechanisms within Airflow to proactively identify and address pipeline failures, reducing downtime by 20% and improving overall data reliability and availability for stakeholders.
- Work closely with managers, engineers, programmers, business stakeholders to design systems and to obtain information on project limitations and capabilities performance requirements and interfaces.
- An effective communicator with excellent relationship building & interpersonal skills. Strong analytical, problem solving & organizational abilities.

TECHNICAL SKILLS:

- **Programming language:** Python, Pyspark, PHP, Node Js, Java script, Typescript
- **Cloud:** GCP, Azure
- **Google Cloud Platform (GCP) :** BigQuery, Cloud SQL, Dataflow, Cloud Monitoring, GCS, gsutil, Cloud Functions, GKE, Cloud Composer, Cloud SQL, Kubernetes Cluster, Secret Manager, Artifact Registry, Cloud Storage, Google Cloud Databricks, Cloud Workflows, and Cloud Logging.
- **Microsoft Azure:** Azure Data Bricks, Azure Data Factory, SQL Database, Log Analytics, Azure Monitoring, Data Warehousing, Data Modeling.
- **ETL Tools:** Ascend.io, Alteryx
- **BigData Technologies:** Apache Hive, Kafka, PySpark, Avro, and Parquet.
- **Scripting:** PowerShell, Linux
- **Orchestration:** Apache Airflow, Dataflow
- **Databases:** MySQL, MS-SQL, Postgres SQL, Apache Hive, Elastic Search
- **Software Frameworks:** Django, CodeIgniter, Docker
- **Designing:** HTML, CSS, Bootstrap
- **Software Life Cycles:** Agile Methodology
- **Other Tools:** Confluence, JIRA, SFTP, DBT, Rundeck, Zabbix

EMPLOYMENT DETAILS:

- Worked as Python Developer in **Tata Consultancy Services** from 2016 to 2022
- Worked as Sr. Data Engineer in **KPMG** from 2022 to till date

PROFESSIONAL EXPERIENCE:

KPMG Global Services – Consultant Data Engineer

Bangalore, India • 09/2022 – Current

PROJECT 1: Mattel – Next Gen Finance (EDMA)

Title	: Data Engineer
Duration	: May 2023 – March 2024.
Role	: Python Developer, Data Engineer and Scrum Master
Client	: Mattel
Technologies	: Google Cloud Platform – (GCS, Big query, Composer, Artifact registry, Airflow, gsutil), Python, Pyspark, Ascend.io, DBT, SFTP, REST/SOAP API, Docker, Postman, Confluent, Jira, GIT, Microsoft Azure

Description:

The main objective of this project is to enable Global Finance's operational simplification needs, to streamline work across the organization, and modernize the global finance organization value proposition through a modern cloud-based financial platform. This includes transforming global financial systems from old, outdated, on premise Oracle technology to Cloud technology, consolidating disparate general ledger legacy accounting systems into a cloud instance, along with migrating the financial reporting and planning applications to cloud. Financial processes will also be consolidated and transformed to industry best practices for a cloud implementation, as well as using a revised chart of accounts and a streamlined legal entity structure.

Responsibilities:

- Responsible for data ingesting/migrate to GCP from different source system using cloud native tools such as GCS Bucket, Cloud functions, gsutil, Cloud Composer, Python, Pyspark, Big Query, Ascend.io, DBT.
- Worked on Ascend.io using read, write and transform connectors to ingest data into GBQ and used DBT tool to create tables.
- Responsible for scheduling jobs using Cloud Composer Dag with custom python scripts for calling Rest/SOAP API.
- Created custom Docker image that acts as accelerator for Ascend.io Tool.
- Expertise in Creating, Debugging and Scheduling jobs using Airflow for ETL batch processing deployed pipelines with CICD.
- Worked extensively on automation and devops implementation using CICD tools like Gitlab, GCP.
- Adhere to Mattel's operating model methodologies, deliverables, tools & templates. Leverage the systems implementer's accelerators, best practices, tools & templates.
- Ensure business demos/ feedback loop is captured through Conference Room Pilots (CRPs) and User Testing.
- Measure results and monitor key performance indicators to ensure project objectives are met post-implementation.

PROJECT 2: Mattel – Next Gen Finance (Enterprise Application Integration)

Title	: Data Engineer
Duration	: May 2023 – till date.
Role	: Data Engineer, Python Developer, Back End Developer
Client	: Mattel
Technologies	: Google Cloud Platform – (gsutil, pub/sub, cloud run, app engine, Kubernetes, GBQ), Kafka, NODE Js, Typescript, JavaScript, Python, Postman, Confluent, Jira, cloud env, Docker, YAML, GIT

Description:

The main objective of this project is middleware solutions delivery by providing both strategic and tactical leadership to integration solution within Mattel. This project include integration framework, API, Service development and governance processes, ensuring quality delivery of solution within the EAI(Near Real Time Processes) across multiple technologies and projects.

Responsibilities

- Responsible for developing and maintaining server-side applications using Node.js. Writing reusable, testable, and efficient code utilizing various Node.js modules and libraries
- Created near real time services using Node-Js to integrate data from Oracle/OIC to endpoints like COUPA, MIMICSDC and MIMICS PLANT, GBQ
- Ingested continues data using confluent Kafka connect.
- Ensure integration design is aligned with standards and best practices and architectural vision
- Created Topics in Kafka Confluent using CICD pipelines
- Implemented Dead Letter Queue (DLQ), GBQ Sink Connector and various other functionalities.
- Demonstrable understanding of transport protocols such as: REST, JSON, JMS, HTTP/HTTPS, SOAP
- Deployments of services in GKE/ Cloud run with CICD pipelines.
- Performed Unit testing using Jest that allows writing tests with an approachable, familiar and feature-rich API and gives results quickly.
- Responsible for API Gateway Exposure (Gloo End point – Webhook, Firestore)
- Implementation of Keda in Kubernetes cluster that bring rich scaling to every workload.
- Excellent teamwork and interpersonal skills, possess the ability to communicate with various levels of management.

PROJECT 3: Signal Repository (KPMG Internal)

Title	: Data Engineer
Duration	: Sep 2022 – May 2023
Role	: Data Engineer, Python Developer, Back End Developer
Client	: KPMG US, KPMG UK Member Firms
Technologies	: Python, Scrapy, BeautifulSoup, Docker, Postgres SQL, Django YAML, Github,

Description:

The main objective of this project is to extract content and data from a website. KPMG Signals Repository is an active listening platform that continuously harvests a variety of data from public and private sources. Structured and unstructured data is transformed into signals and helps clients significantly improve the accuracy in predictions. The KPMG Signals Repository is an accelerator for continuous data interpretation and fact-driven decision-making.

Responsibilities

- Responsible for web scrapping with Python that includes HTML parsing, request handling, and URL routing.
- Engineer restful API's using Django Rest Framework.
- Worked with NumPy, Pandas while scrapping the data.
- Expert in writing python scripts to scrape web data for data usage/collection using BeautifulSoup, Scrapy and Selenium.

- Involved in manual testing of web applications, integration testing.
- Used Git hub to resolve and coding the work on python.
- Interacted with QA to develop test plans from high level design documentation.
- Excellent working knowledge in UNIX, LINUX shell environments using command line utilities.
- Developed and executed various Postgres SQL queries to fetch the signals data.
- Created accelerator for auto processing of unwanted parquet format data
- Implemented Dask in python code that provides parallelism to the existing Python stack.

Other Responsibilities in KPMG: Worked on Data Governance POC's Azure Databricks, Azure Storage, SQL, Pyspark to meet client requirements and providing design & approach.

TATA Consultancy Services – IT Analyst, Software Full stack Developer

Kerala, Mumbai, Hyderabad-India • 09/2016 – 08/2022

PROJECT 1: Enterprise System Management – Tata global infra structure monitoring (TGIM)

Title	: Developer, Integrator
Duration	: Sep 2016 – Aug 2022
Role	: Python Developer, PHP full stack developer, Integrator Application Support
Client	: TCS Global(TCS Internal Project)
Technologies	: Python, Pyspark, PHP, Django, Codeigniter, Elastic Search, Rundeck, Mysql, Ms-sql, Apache Hive, Javascript, JQuery, Zabbix, HTML, CSS, Bootstrap, GIT

Description:

The main objective of this project is to enhance the monitoring solution that can be adopted with a minimal cost. It includes creation, hosting & maintenance of websites. Computer Monitoring Service which tracks Hardware & Software Performance, Performs Maintenance (not Being Physical Maintenance), provides reports and alerts, quality management and Control. This is an in-house project which was build and customized on top of tool called Zabbix to provide complete monitoring solutions for Infrastructure like Servers, Networks, Applications, VOIP devices across the TCS Global Company.

Responsibilities

As Python Developer – (Jul/2019 – Aug/2022)

- Responsible for Development, UI Design, DB Design using Python, SQL and Django Framework
- Create on-demand daily and weekly reports by invoking scripts with custom arguments and parameters to provide actionable data to the test owners.
- Responsible for creating the build files using the various components, interfaces, parameters files etc.
- My responsibilities involved the creation or modifications of the python scripts for the addition of some new features or the enhancements of the existing features or functionalities as per the requirement of product.
- Involved in the creation of python test-scripts
- Rewrite existing Python/DJango modules to deliver certain format of data.
- Worked in Data-Processing to make Consolidated Reports using PySpark, Elastic Search
- Providing BI reports for capacity and availability management using Qlik View.
- Trained and supervised new joiners, providing training support/guidance.

As PHP Developer- Front end and Back end Development (Apr/2017 – Jul/2019)

- Responsible for creating Real time monitoring dashboards(includes key performance indicators)
- Security compliance reports of TCS assets (des, dlp, cs, sccm etc.)
- Developed and deployed ITIL Capacity Management Report & Service Availability Report in 40+ Portals
- Designed and deployed various custom applications, and it's enhancements
- Developed Centralized ITIL Capacity Report & Centralized Service Availability Report and scheduled jobs daily, weekly and monthly basis that enables higher management aligned with audit work.
- Developed a Single Sign on (SSO) feature for integrating multiple portals into a single portal.
- Implemented API Configuration (Customized API, In-built API's) -Chat bot API, Host add/del API, GPS buyback request API, Laptop Provisioning API.
- Experience in applying the latest development approaches including AJAX, Object Oriented Programming, JavaScript, Json, Angular Js, XML
- Involved in writing application-level code to interact with API's, REST ful webservices using AJAX, JSON.
- Expertise in coding optimized SQL queries on databases like MySQL.
- Worked in Agile, Waterfall methodologies.

As Application Support Analyst – (Nov/2016 – Apr/2017)

- Responsible for the administration, monitoring and maintenance of software infrastructures and applications
- Written Ansible scripts for Automated Patching, Server migration, Software application installation activities hosted on different location portals.
- Written custom scripts to automate processes
- Performed BCP Activities, Crons scheduling of jobs
- Responsible for Zabbix & SCOM applications of Server, Network, URL, Content, Services Monitoring
- Ensured high quality data collection and maintaining the integrity of the data. Collaborated with internal teams to convert end user feedback into meaningful and improved solutions.
- Worked on build and usage of Zabbix inbuilt API's for Host and Host group Add/Update/Delete
- Customize the monitoring tool according to the customer needs by providing some custom scripts for monitoring.
- Providing real time dashboards for the health monitoring of the servers and network devices.

Providing maintenance feature to avoid unwanted downtime.

EDUCATION:

- Bachelor's (Electronics and Communication Engineering) from Vignan's Lara Institute of Technology and sciences, Guntur, Andhra Pradesh, India – 2016 with 80%

CERTIFICATIONS:

- ITIL Foundation Certificate in IT Service Management,
- Alteryx Foundation Micro-Credential
- Lean Six Sigma Green Belt, Black Belt

ACHIEVEMENTS:

- Awarded as "Rock STAR" in KPMG.
- Received Team Award for ES Oracle Application Engagement.
- Applause for Team Award
- On the Spot (Team) Award in TCS, Mumbai
- Special Initiative Award in TCS, Hyderabad
