

JAGADEESH CHALLAGUNDLA.

Sr. DevOps/Cloud Engineer

832-409-3736.

Jagadeeshch0501@gmail.com

Professional Summary:

Professional with 8+ years of IT experience in cloud platforms like **Microsoft Azure, Amazon Web Services (AWS), OpenStack**, under the Unix/Linux/Windows and Configuration Management tools like **Ansible, Chef, Kubernetes**, and **Continuous Integration/Continuous Delivery (CI/CD)**, **Linux and System Administration** platforms with strong knowledge on the principles and best practices of **Software Development Life Cycle (SDLC)** in Agile, Scrum, and Waterfall methodologies.

TECHNICAL SKILLS:

Cloud Environments:	AWS, GCP, MS Azure, Open Stack, PCF
Operating Systems:	Linux (RedHat, CentOS, Debian Ubuntu), Unix, Windows
Configuration Management Tools:	Ansible, Chef, Puppet
CI/CD Tools:	Jenkins, Bamboo, Azure DevOps, Team City, Octopus Deploy
Container Tools:	Docker
Container Orchestration Platform:	Kubernetes, Docker Swarm, OpenShift, EKS, AKS, ECS
Version Control Tools:	Sub Version (SVN), Git, GitHub, GitLab, Bitbucket
Build/Automation Tools:	Gradle, Maven, Ant, MS Build
Monitoring Tools:	Nagios, Splunk, ELK Stack, Datadog, AppDynamics, New Relic, Prometheus
Scripting:	Bash/Shell, Python, Ruby, JSON, Groovy
Databases:	MySQL, MS SQL, Liquibase, Mongo DB, Dynamo DB
Web Servers:	Apache HTTP, Nginx
Application Servers:	Apache Tomcat, JBoss, Web Logic, WebSphere
Networking:	DNS, DHCP, SMTP, HTTP, SNMP
Repository Management tools:	Artifactory, Nexus, Docker Hub, Azure Artifacts
Web Technologies:	HTML, CSS, HTTP, Bootstrap, Xml and PHP
Bug/Ticket Tracking Tools:	JIRA, Remedy, Azure Boards, ServiceNow
Testing Tools:	Selenium, Junit, Cucumber
Other Tools:	TFS, Confluence, RabbitMQ, Redshift

Education

- Masters in information technology management from Concordia University.

Professional Experience:

Echo Global Logistics, Atlanta, GA

Aug 2022- Present

Role: Azure DevOps Engineer

Responsibilities:

- Configured and maintained Azure DevOps infrastructure including servers, agents, and extensions, and Automated deployments using tools like PowerShell, ARM templates, and Azure CLI.

- Configured Azure Event Hubs and Azure Stream Analytics for real-time processing and analysis of financial data, such as stock market data, trading data, and transaction data.
- Set up Azure Scalability and Azure Availability using the Azure portal to provide resiliency for IaaS based solution and Virtual Machine Scale Sets (VMSS) using Azure Resource Manager (ARM) to manage network traffic.
- Implemented cloud-based technologies like Azure App Services, Azure Functions, and Azure terraform Storage and Experienced in identifying and resolving issues in Azure DevOps pipelines and infrastructure.
- Designed and implemented CI/CD pipelines using Azure DevOps and DevOps tools such as Azure Boards, Azure Repos, and Azure Test Plans.
- Written Terraform scripts to provision and manage cloud resources, including virtual machines, networks, and storage and implemented Terraform with other tools such as Jenkins, Git, Nexus and deployed containerized applications using Docker and Kubernetes (AKS).
- Written Templates for Azure Infrastructure as code using Terraform to build staging and production environments. Integrated Azure Log Analytics with Azure VMs for monitoring the log files, store them and track metrics and used Terraform as a tool, Managed different infrastructure resources Cloud, VMware, and Docker containers.
- Implemented Liquibase to manage and version control the database schema and data. And used to make database changes such as XML, YAML, JSON, or SQL scripts.
- Integrated Liquibase with CI/CD pipelines and enabling automated database updates for application changes and Configured database schema and data changes to apply consistently and reliably as part of the deployment process.
- Implemented & deployed Kubernetes clusters on various cloud platforms such as Azure, AWS, GCP. and Created Docker images, Docker file, and Docker Compose files for application deployment.
- Configured Kubernetes for creating new Projects, Services for load balancing and adding them to Routes to be accessible from outside, Creation of Pods through new application and control the scaling of pods, troubleshooting pods through ssh and logs, writing/modification of Build configs, templates, Image streams etc.
- Developed configuration management principles and the ability to design and implement configuration management solutions and Configured writing complex Ansible playbooks for managing configuration across multiple servers.
- Implemented Ansible and Ansible Tower as Configuration management tool, to automate repetitive tasks, quickly deploys critical applications, and proactively manages change and configured Ansible Tower to manage Multiple Nodes and Manage Inventory for different Environments.
- Integrated Azure DevOps with other tools such as Nexus, SonarQube, Maven, Urban Code Deploy and Implementation with configuring and maintaining Azure DevOps infrastructure including servers, agents, and extensions.
- Configured SonarQube application to perform continuous inspection of code quality and static analysis of code to detect bugs, code smell and security vulnerabilities. Integrated SonarQube, Checkmarks and Black duck with Jenkins and installed required plugins to support the programming languages. Created quality gates and profiles with custom conditions/metrics and configured email to send the scan report.
- Integrated Harness with other tools such as Git, Jira, Jenkins, and Docker. Configured and maintained Harness infrastructure including servers, agents, and integrations.
- Worked on harness for Compliance and Security to provide a range of security features, such as encryption, role-based access control, and compliance reporting, ensuring that businesses meet regulatory and security requirements.
- Implemented Multi-Cloud Deployments for Harness to allow businesses to deploy applications to multiple cloud platforms, such as Azure, and GCP, enabling them to avoid vendor lock-in and take advantage of different cloud provider features.
- Implemented database design, modeling, and optimization for both on-premises and cloud-based deployments. and Conducted database monitoring and alerting tools such as Nagios, Datadog, or New Relic. and worked on identify and resolve issues in monitoring infrastructure and dashboards.
- Worked on Infrastructure Monitoring by using Grafana, Prometheus, and Datadog to monitor infrastructure performance in real-time, such as CPU usage, memory usage, and network activity. This allows teams to quickly identify and troubleshoot any issues that may arise.

- Managed and developed distributed tracing and APM (Application Performance Management) tools. And created Comprehensive cloud monitoring for Azure, and GCP.
- Worked on python scripting for Web Scraping and Automation tasks in real-time. This is useful for applications such as online marketplace monitoring, price comparison, and content aggregation.
- Developed and deployed real-time IoT applications by using python for processing and analyzing data from sensors, devices, and actuators.
- Implemented scripting for automation of various tasks such as deployment, testing, monitoring. and integrated Python scripts with other DevOps tools such as Jenkins, Ansible, or Kubernetes.
- Developed and maintained Change Management using ServiceNow's ticketing tool to manage real-time change requests and approvals, helping IT teams to ensure that changes are implemented in a controlled and organized manner.
- Configured and customized ServiceNow for various ITSM (IT Service Management) processes. and Implemented ServiceNow's CMDB (Configuration Management Database) and ITOM (IT Operations Management) modules.

Environment: Ansible, AWS, Azure, PowerShell, Jira, GCP, Harness, Datadog, Grafana, Prometheus, Nexus, SonarQube, Maven, Python, Kubernetes, GIT, Jenkins, Terraform, Docker.

Syncron Inc, Atlanta, GA

Sept 2021-Aug 2022

Role: Cloud/DevOps Engineer

Responsibilities:

- Managed large-scale infrastructure migration to AWS cloud for various clients by leveraging EC2, S3, EBS, ELB, and Auto Scaling.
- Designed and implemented highly available and fault-tolerant architectures using AWS services such as CloudFormation, CloudWatch, and Elastic Load Balancing (ELB).
- Built data processing pipelines with Amazon Kinesis and Amazon SNS to handle high-volume data streams and deliver real-time insights.
- Configured and maintained relational databases using Amazon RDS for MySQL, PostgreSQL, and Oracle, as well as NoSQL databases such as Amazon DynamoDB.
- Deployed and managed containerized applications using Amazon Elastic Container Service (ECS) and Kubernetes on Amazon EKS.
- Implemented DevOps practices with AWS Code Pipeline, Code Build, and Code Deploy to automate the software release process.
- Conducted security audits and implemented compliance controls using AWS Security Services such as AWS Config, AWS CloudTrail, and AWS Firewall Manager.
- Configured AWS CloudFormation Which enables Infrastructure as Code (IaC) by allowing users to define and deploy infrastructure resources using code. This allows for easier management, version control, and reproducibility of infrastructure.
- Managed Liquibase to facilitates collaborative database development for enabling multiple developers to work on the same project simultaneously and used for merging and resolving conflicts in the database changes to ensure smooth collaboration in a team environment.
- Implemented AWS CloudFormation Which is used to deploy serverless applications, including AWS Lambda functions, API Gateway, and other serverless resources. This enables faster development and deployment times for serverless applications.
- Configured Resource Provisioning in AWS CloudFormation that enables users to provision infrastructure resources in a consistent, repeatable manner. This includes resources such as EC2 instances, RDS databases, load balancers, and more.
- Designed and implemented container orchestration solutions using Kubernetes and OpenShift to manage the deployment and scaling of containerized applications.
- Implemented container security best practices, including image scanning, vulnerability management, and access control using Docker Security Scanning and OpenShift Security Policies.

- Optimized Kubernetes cluster performance and scalability, using tools such as Helm, Prometheus, and Grafana to monitor and tune resource usage.
- Conducted performance testing and optimization of Kubernetes-based applications, identifying, and resolving performance bottlenecks using tools such as Kube-bench and Kubectl.
- Collaborated with development teams to integrate Kubernetes into the development process, including testing, deployment, and monitoring of containerized applications.
- Configured and optimized Ansible performance and scalability, using tools such as AWX and Ansible Tower to manage large-scale infrastructure.
- Implemented Ansible security best practices, including access control, encryption, and auditing to secure infrastructure.
- Developed custom Ansible modules and plugins to automate complex tasks and integrate with existing systems.
- Designed and implemented GitLab-based CI/CD pipelines for applications and infrastructure, using GitLab Runners to execute jobs and manage resources. Configured GitLab Runner to build and deploy Docker images, enabling containerization of applications and infrastructure.
- Developed custom GitLab extensions and integrations using GitLab APIs and webhooks to extend functionality and integrate with other systems.
- Developed and maintained custom plugins and integrations for Cloud Bees Jenkins to enable seamless integration with other tools and systems, such as jFrog, SonarQube, and GitHub.
- Integrated GitHub with Cloud Bees Jenkins to enable version control, code review, and collaboration for development teams.
- Conducted security testing and vulnerability scanning using Black Duck, identifying, and addressing security issues and vulnerabilities in applications and infrastructure.
- Conducted performance testing and optimization of application server configurations, identifying, and resolving performance bottlenecks to ensure optimal application performance.
- Developed and maintained custom monitoring and logging solutions for application servers, using tools such as Nagios, Zabbix, and Splunk to ensure server health and availability.
- I have extensive experience working with various databases such as MySQL, PostgreSQL, Oracle, SQL Server, and MongoDB.
- Designed and implemented highly available, fault-tolerant database solutions using clustering, replication, and load balancing techniques.
- Configured and deployed AppDynamics agents and controllers to monitor application performance and identify issues such as slow response times, errors, and crashes.
- Configured and optimized Elasticsearch clusters for efficient log indexing, search, and analysis. Developed custom Logstash pipelines to parse, enrich, and filter log data before indexing it into Elasticsearch.
- Created custom Kibana dashboards and visualizations to provide real-time insights into system performance, security, and compliance.
- Developed custom Python scripts to automate code deployment, testing, and release processes using tools such as Jenkins, GitLab, and Travis CI.
- Conducted performance testing and optimization of Python scripts, identifying, and resolving performance bottlenecks to ensure optimal script performance.
- Implemented GitOps best practices using Argo CD and Flux CD to automate application deployments and manage infrastructure as code.
- Collaborated with development and operations teams to ensure that applications and infrastructure are defined as code and version controlled in Git repositories.
- Developed custom controllers and operators using Argo CD and Flux CD to automate complex deployment scenarios such as blue-green and canary releases.
- Provided support and troubleshooting for Argo CD and Flux CD-related issues, working closely with development and operations teams to identify and resolve problems in a timely manner.
- Implemented GCP services such as Compute Engine, Kubernetes Engine, and App Engine to manage infrastructure and application deployments.

- Created custom machine images and optimized them to reduce application deployment time using Google Cloud's custom images and image builder.
- Implemented Infrastructure-as-Code (IaC) using GCP Deployment Manager to automate the provisioning of infrastructure resources such as Compute Engine instances, Kubernetes clusters, and Cloud Functions.
- Utilized GCP's continuous integration and continuous delivery (CI/CD) tools such as Cloud Build and Container Registry to automate the build and deployment of applications.

Environment: JIRA, CloudWatch, ELB, MySQL, Oracle, MongoDB, DynamoDB, AppDynamics, Elk, EKS, ECS, GitHub Actions, AWS Services, Azure Services, Google Cloud, git, GitHub, SonarQube, Gitlab, Maven, ANT, Selenium, Argo CD, Flux CD, Docker, Kubernetes, Helm Charts, CloudFormation, Ansible, Packer, Grafana, Prometheus, ServiceNow.

Citibank, New York, NY

March 2019 - July 2021

Role: Site Reliability Engineer

Responsibilities:

- Designed and implemented real-time applications on AWS using services such as Amazon EC2, Amazon S3, Amazon Kinesis, Amazon DynamoDB.
- Configured and managed AWS networking, security, and identity services, such as VPC, IAM, Security Groups, Network ACLs.
- Worked on integrated AWS Cloud Watch with EC2 instances for monitoring the log files and store in cloud watch logs and used lambda services through python scripts for taking regular EBS snapshot. Designed an AWS cloud formation template to create VPC.
- Managed and deployed serverless applications on AWS using services such as AWS Lambda, AWS API Gateway, and AWS Step Functions.
- Designed and implemented highly scalable and resilient microservices-based applications on Amazon ECS and Amazon EKS using Docker containers.
- Developed and deployed cloud-native applications on Amazon ECS and Amazon EKS using Docker containers and other cloud-native technologies, such as AWS Lambda, AWS API Gateway, and AWS CloudFormation.
- Configured Chef to build up services and applications on the instances once they have been configured using CloudFormation.
- Worked on Chef to automate the deployment and configuration of cloud infrastructure on Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP).
- Developed CI/CD system with Jenkins on Kubernetes container environment, utilizing Kubernetes and Docker for the CI/CD system to build, test and deploy. Used Jenkins for Continuous Integration and deployment into Tomcat Application Server.
- Implemented and maintained CI/CD pipelines using Jenkins, including integrating with tools such as JFrog Artifactory for artifact management and SonarQube for code quality analysis.
 - Implemented build and release processes using tools such as Gradle, Maven, or Ant.
 - Worked on deployment automation tools such as Octopus Deploy, and ability to use them to automate deployment workflows across multiple environments.
 - Designed and implemented MongoDB database solutions, including deploying and managing MongoDB clusters on-premises or in the cloud.
 - Developed MongoDB data modeling concepts, including sharing, replication, and indexing, and ability to optimize database performance for high availability, scalability, and efficiency.
 - Maintained Splunk search language (SPL) and ability to use it to extract, analyze, and visualize data from various sources such as log files, metrics, and events.
 - Managed Splunk deployment options, including standalone, distributed, and cloud-based architectures, and ability to design and implement scalable and highly available Splunk environments.
 - Implemented Splunk development frameworks such as Splunk SDKs and REST API, and ability to use them to build custom Splunk applications and integrations.
 - Worked on Groovy syntax and concepts, including closures, meta-programming, and functional programming, and ability to apply them to solve complex problems.

- Created Groovy-based testing frameworks such as Geb and Selenium, and ability to use them to build automated tests for web applications.
- Developed object-oriented programming (OOP) concepts and ability to apply them to write modular and reusable Groovy code.

Environment: Terraform, GCP, AWS, Amazon Kinesis, Lambda, AWS API Gateway, Docker, Amazon ECS and EKS, Python Script, Kubernetes, SonarQube, Gradle, Maven, Ant, Groovy, Selenium, Ansible, GIT, Jenkins, CI/CD, Docker, GIT.

Athena Global Technologies Ltd, Hyderabad

Oct 2017 – March 2019

Role: CICD Engineer

Responsibilities:

- Worked on designing, implementing, and managing complex virtualization solutions for large enterprises.
- Managed deployment and configured VMWare vSphere environments, including high availability, fault tolerance, and disaster recovery.
- Maintained the ability to diagnose and resolve VMWare-related issues quickly.
- Implemented Puppet configuration management technologies, including Puppet Enterprise, Puppet Open Source, and Puppet Bolt.
- Worked on deploying and configuring Puppet agents, including installation, setup, and configuration of Puppet clients.
- Developed Puppet modules creation, testing, and deployment of custom Puppet modules.
- Implemented Maven build tool for building, testing, and deploying Java applications.
- Managed Maven plugins, including custom plugin development, and integration with third-party plugins.
- Maintained & Developed Maven repository management, including setup and maintenance of local and remote repositories.
- Configured the Maven-based build automation tools, such as Ant and Gradle.
- Experienced in configuring and customizing Jenkins plugins and integrating with third-party tools, such as GitHub, JIRA, and Docker.
- Automated the version control systems, such as Git or SVN, and their integration with Jenkins builds.
- developed and deployed Java applications, including web applications and RESTful APIs.
- Implemented Java security best practices, including encryption, authentication, and authorization.

Environment: AWS, Puppet, Chef, Docker, Jenkins, JIRA, Ant, Gradle, Maven, GIT, Nexus, Splunk, Python, UNIX Shell Scripting.

Caliber Technologies, Hyderabad

May 2015 – Oct

2017

Role: Java Developer

Responsibilities:

- Worked on Java programming language, with experience developing enterprise-level applications using Java frameworks such as Spring, Hibernate, and Struts.
- Created object-oriented design principles, data structures, and algorithms.
- Experienced in front-end technologies such as HTML, CSS, and JavaScript, and ability to develop responsive user interfaces using frameworks like Bootstrap and AngularJS.
- Implemented version control systems such as Git and experience working with continuous integration and deployment tools like Jenkins.
- Worked on collaborative environments, including cross-functional teams and code reviews.

- Excellent written and verbal communication skills, with the ability to explain technical concepts to non-technical stakeholders.

Environment: HTML, CSS, JavaScript, Bootstrap, Jenkins, Spring, Hibernate, Struts, AngularJS.
