

Jerry Ward

Senior Software Engineer | Python, Java, Node.js, React, Vue.js

(707) 409-0876

jerryward.work@gmail.com

Atlanta, GA 30310

Summary

Senior Software Engineer with over 10 years of experience in full-stack development, specializing in scalable and secure web applications with Python, Django, Flask, Java, Node.js and React and Vue. Demonstrated expertise in RESTful API design, DevOps, and database optimization. Proven leader with a track record in guiding teams and collaborating with clients to deliver impactful software solutions.

Experience

Senior Software Engineer, Atos – Irving, TX

April 2023 - Present

- Developed a Digital Marketplace for an international e-commerce client, leveraging Python, Django, Java, and React to create a scalable full-stack solution.
- Designed and implemented RESTful APIs and GraphQL APIs, supporting high-traffic transactions with optimized performance.
- Built product features including real-time inventory tracking, personalized product recommendations, and secure checkout integrations with multiple payment gateways like Stripe and PayPal.
- Enhanced transaction capacity by 30% using advanced database optimization techniques with PostgreSQL and MongoDB.
- Developed a microservices architecture with Docker, Kubernetes, and integrated Java-based services for seamless communication between legacy and new systems.
- Collaborated with frontend teams to create responsive, dynamic user interfaces using React and TypeScript for seamless customer experiences.
- Led the integration of a real-time analytics dashboard using Vue.js and D3.js for visualizing customer behavior trends, increasing conversion rates by 15%.
- Worked closely with the DevOps team to implement a CI/CD pipeline using Jenkins and GitHub Actions, streamlining deployments and minimizing downtime.
- Implemented OAuth2 and JWT authentication protocols, enhancing system security and compliance.
- Migrated legacy systems to AWS services, including EC2, S3, and RDS, reducing operational costs by 20%.

Senior Software Engineer, Walmart – Bentonville, AR

July 2019 – March 2023

- Designed and developed a Financial Forecasting and Budgeting System using Django, Flask, and React, supporting real-time updates and increasing forecasting accuracy by 25%.
- Architected modular backend services using Node.js, Express.js, and Java Spring Boot APIs, integrating seamlessly with Walmart's ERP and accounting systems.
- Optimized database performance for PostgreSQL and MongoDB, achieving a 20% reduction in query times for financial reports.
- Created dynamic frontend components using React and Redux, improving dashboard responsiveness and user experience.
- Integrated the system with third-party APIs for real-time financial data synchronization and reporting.
- Deployed the application using Docker containers orchestrated with Kubernetes, ensuring high availability during peak financial cycles.
- Enhanced testing coverage using pytest, Cypress, and JUnit for backend services, reducing error rates in budget reports by 20%.
- Designed interactive dashboards with Chart.js and Highcharts, enabling financial teams to track budgets, analyze trends, and improve decision-making.
- Collaborated on cloud architecture solutions with AWS Lambda, DynamoDB, and S3, improving system scalability.

Software Engineer, Perficient – Atlanta, GA

July 2014 – June 2019

- Built a Patient Portal using Python, Django, and Vue.js, providing secure access to patient data and integrating features like medical records retrieval and appointment scheduling.
- Developed backend systems with Flask and frontend interfaces using React for a seamless full-stack solution.
- Improved API performance with GraphQL and optimized MySQL queries, reducing data retrieval times by 40%.
- Automated CI/CD workflows using GitLab CI and Docker, ensuring rapid, reliable deployments.
- Created a Data Integration Platform using Node.js and RESTful APIs, enabling communication between inventory systems, CRM platforms, and financial applications.
- Designed frontend dashboards with Vue.js, improving user engagement through interactive data visualizations.
- Deployed projects to cloud platforms like AWS and Azure, leveraging services like Elastic Beanstalk and Azure Functions for scalability.
- Mentored junior developers on best practices in full-stack development, including API design, database optimization, and frontend engineering.
- Conducted requirement analysis and developed comprehensive technical solutions, ensuring projects were delivered on time and within scope.

Education

Sep 2009 – May 2013

Bachelor of Science, Computer Science – Emory University

Skills

- Programming Languages: Python, JavaScript, TypeScript, Node.js, Java, Express.js, NestJS
- Frameworks: Django, Flask, React, Redux, Vue.js, Java Spring Boot
- API Development: RESTful APIs, GraphQL APIs, third-party API integrations, API performance optimization
- Database Management: PostgreSQL, MySQL, MongoDB; schema design, query optimization, and real-time data synchronization
- Cloud Computing & DevOps: AWS (EC2, S3, RDS, Lambda, DynamoDB), Azure (Elastic Beanstalk, Azure Functions), Docker, Kubernetes, CI/CD pipelines (GitLab CI, Jenkins, GitHub Actions)
- Frontend Development: Dynamic UIs with React, Vue.js, and TypeScript; data visualizations with Chart.js, Highcharts, and D3.js
- Security & Authentication: OAuth2, JWT, secure data handling
- Testing & QA: unittest, pytest, Cypress, JUnit; comprehensive test coverage and error reduction
- Analytics & Dashboards: Interactive dashboard development for real-time analytics and user insights
- Team Leadership: Mentoring junior developers, cross-functional team collaboration, requirement analysis, and agile methodologies
