Summary

Senior Software Engineer with 12+ years of hands-on experience in .NET, React, AWS, and microservices architecture. Adept in Node.js, Go, Python, and API development, with a keen focus on building event-driven, cloud-native applications. Strong leadership skills in agile teams, driving innovation and delivering efficient, scalable solutions. Known for expertise in test-driven development, optimizing performance, and creating robust technical documentation. Proven track record across healthcare, insurance, and SaaS industries.

Skills

Programming Languages

C#, JavaScript, TypeScript, Python,
Golang, SQL, Java

Software Design & Architecture

Microservices, SOLID Principles, DDD,
OOP, Event-Driven Architecture,
Hexagonal Architecture

Backend Technologies

ASP.NET Web API, ASP.NET MVC,
Entity Framework (EF Core), Dapper,
ADO.NET, Node.js, Java Spring, GIN,
GORM

Frontend Technologies

Blazor, React, Next.js, Redux, HTML5,
CSS3, SASS, Bootstrap, jQuery

Mobile Development

React Native, Xamarin.Forms, Android

Database Management

Microsoft SQL Server, MySQL,
PostgreSQL, MongoDB, Redis, AWS
RDS, AWS DynamoDB

Experience

Senior Software Engineer

GE HealthCare

01/2022 – 02/2025 | Madison, WI

- Led the development of a high-performance telehealth SaaS platform for GE HealthCare using .NET 8, Next.js 14, and PostgreSQL, enhancing scalability, user experience, and generating \$4M in monthly revenue.
- Engineered optimized database solutions with PostgreSQL, AWS RDS, EF Core, LINQ, PL/pgSQL, and Redis caching, boosting performance and reliability under heavy data loads.
- Designed a scalable backend architecture with ASP.NET Core Web API, microservices, event-driven design, AWS SQS/SNS, and implemented AWS Cognito with OAuth2, OpenID Connect, and JWT for secure, efficient communication and authentication.
- Developed a high-performance Patient Appointment Scheduler for GE Healthcare, leveraging Golang's Goroutines for efficient concurrency and real-time scheduling with ultra-low latency and high-throughput handling.
- Secured RESTful APIs and gRPC services, ensuring reliable, low-latency communication between microservices while maintaining high performance.
- Managed codebase integrity with Git and GitHub, implemented containerization with Docker, set up CI/CD pipelines using Kubernetes, and utilized Terraform for Infrastructure-as-Code (IaC) to ensure smooth collaboration, version control, and streamlined deployments.
- Leveraged AWS services like Lambda, API Gateway, and S3 for serverless functions, real-time communication, and scalable storage to optimize system performance and costs.
- Developed a high-performance frontend using React, Next.js 14, SSR, Tailwind CSS, and design patterns to optimize load times, SEO, and user experience.
- Created responsive mobile applications with React Native and MVVM design pattern, and developed desktop applications using WPF, ensuring a smooth, modular user experience across iOS, Android, and Windows platforms.
- Integrated secure third-party payment services like Stripe and PayPal to ensure seamless, compliant transaction processing for users.
- Developed and deployed an AI-guided patient management system and diagnosis platform using Python, TensorFlow, and an integrated GenAI ChatBot, improving healthcare decision-making and operational efficiency.
- Implemented comprehensive testing strategies using xUnit for unit testing and Selenium for end-to-end testing, ensuring platform reliability and stability.
- Led a team of 3 developers, managing Agile workflows and technical documentation with Jira, driving iterative development, code reviews, and task prioritization to meet project goals.

Full Stack Engineer

Cognizant

09/2018 – 12/2021 | Tampa, FL

- Spearheaded the development of the Ray Pay platform, delivering a reliable and scalable solution using .NET 5, React.js 17, MongoDB, and integrating microservices and event-driven design principles.
- Contributed to the creation of Biocodex's nurse and vendor management system, leveraging .NET 4.7.2, React.js 16, MS SQL, and ASP.NET MVC to deliver a robust, high-performance application.
- Optimized database management through ADO.NET, Dapper, and advanced query techniques (PL/pgSQL, T-SQL), while utilizing cloud-native databases like AWS RDS and DynamoDB for enhanced data storage and retrieval.

API Development & Integration

RESTful APIs, GraphQL, gRPC,
SignalR, RabbitMQ, Kafka, Stripe,
PayPal

Cloud Platforms

Amazon Web Service, Lambda, S3, API
Gateway, EC2, Elastic Beanstalk, EKS,
CloudWatch, SQS/SNS

DevOps & CI/CD

Docker, Kubernetes, Jenkins, GitHub
Actions, Terraform, Git, GitLab,
BitBucket, CI/CD Pipelines, CircleCI

Monitoring & Logging

CloudWatch, Prometheus, Grafana

AI Frameworks

Tensorflow, PyTorch, scikit-learn

Testing & Quality Assurance

NUnit, xUnit, Jest, Cypress, Selenium

Methodologies & Soft Skills

Agile, Scrum, Kanban, SDLC,
Collaboration, Mentorship, Leadership

- Revamped system communication by implementing RESTful APIs, GraphQL, and RabbitMQ for smooth inter-service interactions and efficient data processing, while integrating real-time streaming with Kafka to enhance service performance and scalability.
- Designed and built a high-performance frontend with TypeScript, React, Next.js, Redux, and React Router, enhancing user experience through Server-Side Rendering (SSR) for faster load times and responsive interactions.
- Established a comprehensive DevOps pipeline using AWS tools, such as Lambda, S3, EC2, EKS, Elastic Beanstalk, and API Gateway, along with Docker, Kubernetes, Jenkins, Terraform, CircleCI, and GitHub Actions, to automate deployments and scale infrastructure seamlessly.
- Utilized AWS CloudWatch, Grafana, and Prometheus to monitor and analyze system performance, ensuring consistent uptime and quick identification of issues.
- Worked within an agile development team, managing tasks through Scrum and creating comprehensive internal documentation via ClickUp.

Full Stack Developer

SumatoSoft

01/2015 – 08/2018 | Boston, MA

- Played a key role in developing and optimizing a scalable Patient Management System using .NET, React, and MS SQL, ensuring the solution's long-term maintainability, flexibility, and ability to meet evolving business needs.
- Enhanced backend performance by implementing ASP.NET, ASP.NET MVC, and Entity Framework to build high-performance APIs that ensure fast, reliable data access for high-demand operations.
- Improved database schema design and optimized query performance in MS SQL, LINQ, and T-SQL, significantly reducing response times and boosting data retrieval efficiency even under heavy traffic loads.
- Developed serverless functions using AWS Lambda to streamline processing, while leveraging AWS S3 for secure, scalable file storage, and API Gateway to implement efficient RESTful APIs and GraphQL for seamless data exchange.
- Elevated frontend performance by optimizing React, Redux, Redux Saga, and JavaScript, incorporating techniques like lazy loading, advanced state management, and enhancing user experience through faster page loads and smoother interactions.
- Led quality assurance initiatives by writing and executing comprehensive unit and integration tests with NUnit and Jest, adhering to Agile methodologies, and utilizing Atlassian Jira to manage tasks, track progress, and resolve bugs effectively.

Education

Bachelor's Degree in Computer Science

Seattle Pacific University

- 09/2004 – 06/2009 | Seattle, WA
