

Kenny Grimes

Dallas, TX | tgrimebravely@gmail.com | +1 214 571 4537 | <https://www.linkedin.com/in/tgrime-kenny>

Skills

- C#, TypeScript, JavaScript, SQL, Python, C++, Java
- React, Angular, Redux, RxJS, NgRx, Kendo, HTML, CSS, jQuery
- ASP.NET, ASP.NET Core, Soap, RESTful API, SignalR, Entity Framework, ADO.NET, Laravel, Visual Studio
- Azure, AWS, Docker, Kubernetes, TeamCity, Git, TFS
- MS SQL Server, PostgreSQL, MongoDB, Redis, SSIS, SSRS, SSMS
- OAuth2.0, JWT, TLS, Datadog, Serilog, Azure App Insights

Work Experience

HCA Healthcare, Remote | Senior Full Stack Engineer

June 2022 – April 2025

Led the development of a reliable and scalable SaaS healthcare portal, enhancing the user experience by implementing ASP.NET Core 8, Angular, Azure microservices, RESTful APIs, and Agile methodology

- Architected and developed a fault-tolerant microservices architecture of Healthcare portal using ASP.NET Core 8, Azure Service Bus, Entity Framework and Polly for resilient inter-service communication, seamless patient data access, and sustained system availability during partial outages
- Constructed responsive patient facing UI using Angular 18, Typescript, RxJS, NgRx and Angular Material within a micro-frontend architecture, integrating FHIR-based APIs for real-time appointment scheduling and lab result access across devices
- Orchestrated the creation of secure and scalable RESTful APIs to support modules like patient scheduling, EHR access, and insurance verification
- Constructed SSIS-based ETL pipelines to unify EHR, lab, and billing data, and delivered SSRS reports to support compliance, patient care, and executive insights
- Revolutionized database performance by designing and implementing indexing strategies and stored procedures in MS SQL Server, cutting average query execution time by 4 minutes
- Ensured HIPAA compliance with OAuth 2.0 and Azure AD B2C and ensuring data security through TLS, JWT, and IP whitelisting
- Implemented unit and integration tests (TDD) using xUnit, Moq, and Jasmine/Karma for .NET Core APIs and Angular components, achieving over 80% code coverage and ensuring reliability across critical healthcare modules
- Architected CI/CD pipelines with Azure DevOps, automating build, testing, containerization, and deployment to Azure Kubernetes Service(AKS) with Azure API Management, integrating Serilog and Azure Application Insights for centralized logging and monitoring
- Integrated real-time communication with SignalR and developed Azure AI, Python service to automate appointment reminders, extract clinical data, and enhance patient engagement across the portal
- Mentored one junior engineer on best practices in .NET, Angular and cloud development while driving Agile ceremonies to improve team velocity and delivery quality

Goldman Sachs, Remote | Senior Software Engineer

January 2020 – May 2022

- Modernized legacy ASP.NET WebForms systems to React, ASP.NET Core and AWS Lambda enhancing investment platform responsiveness, reducing operational risk, and accelerating financial transaction workflows
- Engineered dynamic, responsive web applications using React 13, TypeScript, Redux Toolkit, and React Query, optimizing performance with code splitting, lazy loading, and real-time data synchronization
- Migrated critical SOAP-based services to RESTful APIs, reducing transaction failures, improving system reliability, and minimizing operational risk in real-time transaction system
- Pioneered new RESTful API endpoints for payment processing, account management, KYC verification, implementing OAuth2.0 and JWT for authentication and authorization

- Applied strict security controls including TLS enforcement, IP whitelisting, encryption at rest and in transit, and Azure Key Vault for secrets management to ensure PCI-DSS and SOX compliance
- Automated CI/CD pipelines using AWS CodePipeline and CodeBuild, reducing deployment time by 50% and minimizing manual effort, enabling faster releases and quicker bug fixes
- Designed and optimized complex queries, stored procedures and indexing strategies on MS SQL Server to ensure fast, reliable data retrieval for high-volume financial transactions and reporting
- Conducted A/B testing on React front-end using Monetate and Adobe Target, optimizing user experience and contributing to an 8% increase in business revenue
- Established Datadog infrastructure to track key performance indicators like transaction latency, error rates, and resource utilization, providing findings to fix the three biggest causes of crashes

Emory Healthcare, Remote | Senior .NET Engineer

April 2017 – December 2019

- Revamped the WPF-based lab management portal using ASP.NET MVC, Kendo UI, Entity Framework, and Azure. This project improved accessibility, reduced maintenance effort, and included training for one junior engineer
- Designed PostgreSQL and MongoDB schemas to support lab orders, test results and unstructured clinical data
- Built RESTful APIs in .NET MVC for lab test ordering, specimen tracking, and result reporting, implementing OAuth2.0, and JWT
- Integrated Kendo UI components to create dynamic dashboards and real-time views for lab technicians and administrators, enhancing operational efficiency and decision-making
- Migrated legacy SQL Server data into Azure Database for PostgreSQL, improving query performance, ensuring scalability, and enhancing availability for lab operations
- Engineered data access layers utilizing Entity Framework ORM for PostgreSQL, which standardized database interactions, enhanced maintainability, and slashed development time by 30% across lab management modules
- Built CI/CD pipelines with TeamCity for automated build, test, and deployment of ASP.NET MVC applications and PostgreSQL updates across 4 environments

FTI Consulting, Houston, TX | Software Engineer

June 2014 – March 2017

- Influenced developing backend for a large-scale home insurance project using ASP.NET, ADO.NET, MS SQL and Laravel (PHP) from the scratch
- Participated in transitioning of a legacy VB.NET project to ASP.NET, Angular.js, HTML5, CSS3 and jQuery
- Implemented LINQ and ADO.NET for seamless database communication
- Proficient in C++ and introduced Optimized searching algorithm for fetching required data
- Debugged 20k+ lines of the code for handling the exceptions and upgraded data access layer
- Showcased proficiency in development methodologies like Agile Scrum, Test-driven development (TDD) and version control with TFS

Education

Texas State University | B.A in Computer Science

May 2010 - May 2014
