Summary

- Over 5 years of experience as a **.NET Full Stack Software Developer**, delivering scalable, high-performance solutions across diverse industries. Expertise in analysis, design, development, deployment, testing, and support of client-server systems, Windows applications, and web services.
- Led back-end development projects by architecting and implementing server-side logic with **.NET Core** and **C#**, and excelled in integrating **RESTful** and **Web APIs**, resulting in marked improvements in system performance.
- Experience in using Microsoft **.NET Framework 4.0/3.5/2.0/1.1**, **C#**, **ASP.NET**, **ASP.NET MVC 3/4/5/6**, **VB.NET**, **Windows Forms**, **Web Forms**, and **RDMS** like **MS SQL Server 2008/2005**.
- Pioneered front-end enhancements by creating responsive, user-friendly interfaces using **HTML5**, **CSS3**, **JavaScript**, **ReactJS**, and **AngularJS**.
- Strong Object-Oriented Programming (OOP) skills, extensively applied in **C#** to develop the middle tier of applications.
- Proficient in **RDBMS** with extensive experience in optimizing **SQL Server**, **PostgreSQL**, and **Oracle** schemas and queries for enhanced data retrieval and performance. Skilled in writing efficient **SQL** queries, stored procedures, and utilizing **ORM** tools like **Entity Framework**, **Dapper** and **ADO.Net**.
- Experienced in **Data Modeling** for designing and maintaining optimized, scalable, and consistent database structures across enterprise systems.
- Comprehensive understanding of business processes, applications, and systems.
- Extensive knowledge of cloud integration strategies, utilizing **AWS** and **Azure services**. Expertise in **DevOps** tools like **Jenkins**, **Kubernetes**, and **Docker** to establish robust **CI/CD** pipelines, ensuring efficient development workflows, streamlined deployments, and enhanced system scalability.
- Familiar with monitoring and observability using tools like **DataDog** for real-time insights into system health and performance.
- Proven expertise in **GIT**, **TFS**, and **Jira**, fostering efficient collaboration and seamless integration of changes throughout the **SDLC** using Agile methodologies, enhancing team productivity and code maintainability.
- Familiar with networking protocols such as **IP** and **TCP/IP**, supporting robust backend communication and secure system interactions.
- Well-versed in designing and implementing event-based workflows using messaging tools like **Kafka** and **RabbitMQ** to enable loosely coupled and scalable microservice architectures.
- Strong communication skills enabling effective collaboration with cross-functional teams, stakeholders, and clients, combined with a self-driven, passionate, and highly motivated approach to professional growth and project success.

Technical Skills

- **Programming Languages:** **C#**, **VB.NET**, **Python**.
- **Frameworks and Libraries:** **.NET Framework**, **.NET Core**, **ASP.NET Core MVC**, **Entity Framework**, **Dapper**, **ADO.net**.
- **Web Technologies:** **HTML5**, **CSS3**, **JavaScript**, **jQuery**, **Bootstrap**, **TypeScript**, **Angular**.
- **Databases:** **SQL Server**, **MySQL**, **Oracle**, **PostgreSQL**, **MongoDB**.
- **APIs and Services:** **REST APIs**, **SOAP**, **WCF**, **WPF**, **Web API**, **JWT**, **Middleware**, **Web API Authentication and Authorization**, **CORS**.
- **Cloud Platforms:** **Microsoft Azure** (**Function**, **SQL Database**, **Blob Storage**, **App Service**), **AWS** (**S3**, **EC2**, **Elastic Beanstalk**, **Lambda**, **DynamoDB**, **API Gateway**, **kinesis**, **Redshift**).
- **DevOps Tools:** **Azure DevOps**, **Kanban**, **Jenkins**, **Docker**, **Kubernetes**, **GitHub**, **GitLab**.
- **Testing and Documentation Tools:** **Unit Testing** (**NUnit**, **xUnit**), **Integration Testing**, **Postman**, **Swagger**.
- **IDEs and Tools:** **Visual Studio**, **Visual Studio Code**, **Jira**.
- **Version Control:** **Git**, **SVN**, **TFS**.
- **Design Patterns and Practices:** **MVC**, **MVVM**, **SOLID Principles**, **Dependency Injection**, **Singleton**, **Factory Method**.
- **Operating Systems:** **Windows**, **Linux**, **macOS**.

- **Messaging Tools:** Apache Kafka, RabbitMQ.
- **Reporting Tools:** Crystal Reports, SSRS.
- **Methodologies:** Agile, Waterfall model.

Professional Experience

Client: Bank of America

June 2023 – Present

Role: .Net Developer

- Worked on an auto insurance system to manage customer data, vehicle inspections, and policy updates, ensuring accurate data flow and integration across systems. Also worked on **data migration projects and Informix-based systems** to streamline legacy application modernization.
- Developed APIs to load customer data from agents, retrieve vehicle inspection results from third-party APIs, and update customer profiles with inspection and policy information.
- Working in **Agile/Scrum** mode with a two-week sprint cycle and participating in all scrum ceremonies by handling all phases of the Software Development Life Cycle including Analysis, Design, Implementation, Testing and Maintenance.
- Engineered server-side logic with **.NET Core, ASP.NET MVC, and C#**, utilizing Entity Framework and **Dapper** ORM for efficient data access and mapping, hosted on **IIS** with a strong understanding of Service-Oriented Architecture (**SOA**), achieving a 15% improvement in speed and reliability.
- Developed and maintained scalable data solutions using both NoSQL (GraphQL) and relational database (MS SQL Server), optimizing data storage, retrieval, and performance across hybrid database architectures.
- Designed and maintained ETL packages using **SQL Server Integration Services (SSIS)** to support the migration and transformation of customer and policy data between legacy and modern systems, ensuring data integrity and high performance.
- Executed all phases of the Software Development Life Cycle (SDLC) utilizing Agile methodologies, improving project delivery timelines through iterative development and adaptive planning.
- Developed dynamic and interactive user interfaces using **Blazor**, creating reusable components to enhance UI and **Kafka** for asynchronous messaging and communication between microservices.
- Enhanced user interface responsiveness through advanced angular, JSON and TypeScript, leveraging **Angular** two-way data binding and component-based architecture to reduce average page load times by 25%.
- Implemented secure user authentication and authorization using OAuth2 and OpenID, following OWASP guidelines, and enhanced system security with DNS security and firewall configurations.
- Conducted thorough comprehensive **test automation** using **NUnit** and **xUnit** frameworks, achieving 90% test coverage and reducing post-deployment issues.
- Troubleshoot **PowerShell** scripts, leveraging problem-solving skills to implement error-handling techniques and debugging strategies, promptly identifying and resolving issues for seamless system operation.
- Created detailed documentation using **Swagger** for code, APIs, and system architecture and collaborated with cross-functional teams using **Git** and **Jira** to ensure seamless integration of UI/UX designs, reducing feature development time through a collaborative approach.
- Participated in regular **code reviews** to ensure adherence to coding standards, improve code quality, and identify potential issues early in the development process.
- Implemented efficient development workflows and reduced deployment times by working on serverless Microsoft **Azure** services such as **Function, Blob Storage, and App Service**.
- Utilized OpenShift to manage container orchestration of **Kubernetes** and **Docker** in CI/CD pipelines on Azure to build, test, and deploy applications, achieving streamlined and reliable deployments.
- Leveraged **Terraform** for infrastructure provisioning on Azure, enabling consistent and automated deployment of cloud resources as part of an **Infrastructure as Code (IaC)** strategy.

Technologies: C#, ASP.NET core, ASP.NET Web API, Dapper, Angular, RESTful, Kubernetes, Docker, CI/CD, Azure, Swagger, Git, Jira

Client: HCA Healthcare

November 2020 – July 2022

Role: .Net Developer

- Integrated internal systems with third-party applications via APIs, facilitating seamless data exchange and system interoperability.
- Ensured effective data sharing between HCA Healthcare and partner applications, enhancing operational efficiency.
- Orchestrated the development and management of web applications utilizing expertise in **C#, .NET Core**, and **.NET Web API**, resulting in improvement in project delivery timelines.
- Developed rich, user-friendly, responsive frontend features in the application using **Angular, jQuery, Ajax, Bootstrap, CSS, HTML**, and **JavaScript**.
- Coordinated effectively with stakeholders, leveraging skills in business process analysis and requirements gathering, leading to improved communication and project alignment.
- Well-versed with Test Driven Development (TDD) and used Visual Studio Test Tools for testing, significantly reducing bugs in source code and improving code quality.
- Worked with an internally built client/server application that provides consolidated, aggregated data for the customers using **ASP.NET** and SQL Server Reporting Services (**SSRS**).
- Proficient in developing single-page applications (**SPA**) with **Angular** utilizing controllers, directives, factories, services, routing, DOM manipulation, and JavaScript.
- Implemented Object-Oriented Programming (OOP) concepts and Microservices Architecture for the business logic layer and ASP.NET Web API for RESTful services consuming them for GET, POST, PUT, and DELETE CRUD methods.
- Documented APIs and system architecture thoroughly, using Postman for API testing, ensuring clear communication and reducing onboarding time for new developers by 40%.
- Worked with version controller Team Foundation Server (**TFS**) to maintain the history of source code and project documents.
- Secured web applications by configuring ASP.NET for secure communication, enhancing data protection and compliance with industry standards such as HIPAA.
- Involved in designing and developing **AWS** infrastructure with services like **EC2, S3, RDS, Elastic Load Balancing**, and **SQS**, improving system performance and reliability.
- Collaborated seamlessly with other teams, utilizing skills in **Docker**, CI/CD, ETL/ELT and **Jenkins** ensuring faultless system integration and a 25% decrease in integration-related incidents.

Technologies: .NET framework, C#, ASP.NET, SQL Server, APIs, Entity Framework, Microservices, Unit Testing, AWS, CI/CD Pipeline, SaaS, AES and DES Encryption and Decryption.

Client: Walmart

July 2018 – October 2020

Role: .Net Software engineer

- Developed and maintained software applications for a large e-commerce platform, ensuring seamless user experience and operational efficiency.
- Contributed to inventory management systems, optimizing stock tracking across multiple locations for efficient supply chain management.
- Developed backend robust **.NET** applications using **C#** and **ASP.NET MVC**, reducing data transfer latency and facilitating seamless communication between front-end and back-end systems.
- Developed stored procedures, functions, and triggers using **SQL** and **T-SQL** in **SQL Server** for fetching and binding data, also, created automated tests using **NUnit** and wrote test plans for user testing.
- Created Entity classes and managed relationships between entity classes using **Entity Framework**, and used **LINQ** to Entities to manipulate data, improving query performance and data handling.
- Created responsive and user-friendly web interfaces using **HTML5, CSS3, JavaScript, Angular.js** and **Telerik Kendo** UI controls enhancing user satisfaction and receiving positive feedback from users.

- Collaborated effectively with cross-functional teams including developers, designers, and product managers to deliver high-quality solutions.
- Developed **XML** Web Services using **SOAP**, enabling web access to functionality with detailed interfaces for seamless client integration.
- Implemented **CI/CD** pipelines using **DevOps** collaboration tools like **GitHub**, streamlining the deployment process and ensuring efficient delivery of updates.

Technologies: C#, .NET, MVC, HTML, Angular, CSS, JavaScript, XML, SOAP, T-SQL, Entity Framework, LINQ, DevOps

Education

Master of Sciences in Engineering Management
Trine University

Aug 2022 – May 2024
