

Lakshmi A
Full Stack Developer
lakpranu25@gmail.com
(512) 887 -7987

PROFESSIONAL SUMMARY:

- Over **10+ years** of experience in architecting, designing, and developing **enterprise-grade full-stack applications** using **Java 17/11/8, Spring Boot, Angular 14/10/6/4/2, React.js**, and cloud platforms like **AWS, Azure**.
- Expertise in **Agile methodologies (Scrum, Kanban)**, improving project delivery timelines by **20%** through efficient sprint planning, backlog grooming, and iterative development.
- Led **full lifecycle development**, ensuring **modular, maintainable, and scalable** code using **SOLID, DRY, MVC, MVVM, Singleton, Factory, Observer, Microservices, CQRS**.
- Designed **responsive, cross-browser UI/UX** using **HTML5, CSS4, TypeScript, JavaScript (ES5/ES6), Angular, React.js, Redux, RxJS**, reducing load times by **25%** and increasing user engagement by **20%**.
- Migrated legacy monolithic applications to **Angular-based frameworks**, reducing **technical debt by 40%**, improving front-end performance with **React Virtual DOM, lazy loading, and optimized state management**.
- Developed **high-performance backend solutions** using **Java 11/8, Streams API, lambda expressions, Completable Future, Optional, multithreading, functional programming**, reducing **null-pointer exceptions** and improving **code efficiency by 30%**.
- Built and maintained **RESTful APIs & GraphQL services** with **Java 11/8, Spring Boot, Spring MVC, Spring WebFlux**, ensuring **99.9% uptime**, high throughput, and seamless third-party integrations.
- Implemented **event-driven microservices** using **Spring Boot, Kafka, RabbitMQ, Redis, API Gateway**, reducing **deployment cycles by 50%** and ensuring high availability.
- Optimized database interactions with **Spring Data JPA, Hibernate ORM, QueryDSL**, reducing query response times by **35%** while ensuring efficient indexing, caching, and transactional consistency.
- Strengthened security frameworks with **Spring Security, OAuth 2.0, JWT, SAML**, enforcing strict access control, authentication, and API security to prevent unauthorized data access.
- Designed **cloud-native architectures** deploying serverless and containerized applications with **AWS Lambda, Docker, Kubernetes, Helm**, reducing **cloud infrastructure costs by 15%** while maintaining **99.99% uptime**.
- Automated **CI/CD pipelines** using **Jenkins, GitHub Actions, Docker, Kubernetes**, accelerating **software delivery by 40%** through seamless build, test, and deployment orchestration.
- Optimized database performance across **PostgreSQL, MySQL, Oracle, MongoDB, Redis**, improving **query execution speeds by 40%** with efficient indexing, partitioning, and caching.
- Designed and optimized **big data processing pipelines** using **Snowflake, AWS Redshift, Apache Spark**, handling **terabytes of structured & unstructured data** daily with **99.8% data reliability**.
- Enhanced **real-time monitoring & logging** using **Grafana, New Relic, ELK Stack (Elasticsearch, Logstash, Kibana)**, improving incident response and root cause analysis.
- Developed **test automation frameworks** using **JUnit, Mockito, Jasmine, Mocha, Chai, Protractor**, reducing production defects by **35%** and improving **code coverage & regression testing efficiency**.
- Architected **highly available & scalable cloud solutions** with **AWS (EC2, S3, RDS, Lambda, API Gateway, CloudFront, CloudFormation)**, handling **millions of daily requests** with auto-scaling.
- Implemented **Infrastructure as Code (IaC)** using **Terraform, AWS CloudFormation**, ensuring **automated provisioning, deployment, and disaster recovery** with **100% SLA compliance**.
- Integrated **SonarQube** for static code analysis, ensuring **code quality, security compliance, and early vulnerability detection**.
- Led cross-functional teams in **requirement analysis, architectural decision-making, code reviews, and DevOps integration**, fostering collaboration between **development, QA, and operations** teams.
- Conducted **performance tuning and load testing** using **JMeter, Gatling**, optimizing **server response times, CPU & memory utilization**, ensuring system stability under peak loads.
- Developed **GraphQL APIs** for efficient **data retrieval and query execution**, reducing API payload sizes and improving response times.
- Automated **build, test & deployment pipelines** with **Jenkins, Kubernetes, Docker**, enabling **zero-downtime deployments** and fault-tolerant infrastructure.
- Built **real-time data streaming solutions** with **Kafka, WebSockets, Socket.io**, minimizing latency for high-speed data processing and real-time analytics.

- Engineered **disaster recovery automation** using **AWS CloudWatch, Lambda, SNS, SQS**, ensuring **100% data recovery** within SLA timeframes.
- Optimized **API performance** using **GraphQL, caching (Redis, CDN, API Gateway)**, reducing network latency and improving large-scale application response times.
- Mentored and trained **junior developers**, driving improvements in **code quality, best practices, and technical excellence** through knowledge-sharing sessions.
- Integrated **multi-cloud strategies** with **AWS & Azure**, enabling **cloud-agnostic deployments, disaster recovery, and vendor neutrality**.
- Designed and implemented **Stock Ownership Plan (SOP) solutions** for enterprise clients, ensuring **compliance with SEC regulations**, efficient tracking of stock grants, vesting schedules, and equity compensation.
- Developed and optimized **stock plan management platforms** with **Node.js, Angular, MongoDB**, handling **stock option grants, RSUs, performance shares, and equity compensation**, enhancing real-time reporting and accessibility.
- Integrated **equity management platforms** with **payroll & tax systems**, ensuring **accurate tax withholding, reporting, and regulatory compliance**, streamlining financial operations.

TECHNICAL SKILLS:

Programming Languages	Java 17/11/8, C, C++, PL/SQL
Java/J2EE Technologies	Servlets, Spring, EJB, JPA, JDBC, JSP, JSTL, JNDI,kotlin,Quarkus, Vert.x
Frameworks	Spring 4, Hibernate 2.0/3.0/4.x, Spring Security 3.2
Application/Web servers	Apache Tomcat 8, IBM WebSphere 8.x/9.x, Jetty, Jenkins, WebLogic
Relational Databases	Oracle 10g/11g/12c, SQL server 2012/2014/2016, MySQL 5.7, DB2 11.1
NoSQL Databases	MongoDB, Cassandra
Internet Technologies	HTML 5, JavaScript 1.8, XML 2.0, CSS 4, jQuery 2.11, Angular14/10/9/8/6/4Node JS 6.0.
Cloud Environments	ji, AWS, Netflix Eureka, Mesos, Kubernetes, pcf.
IDE	Eclipse, NetBeans 8.0.2, IntelliJ 2017.1, Spring Tool Suite (STS), VS code
Operating system	Windows 10, Linux Mint 18.1, Unix
Testing & Bug tracking Tools	JUNIT4.12, JIRA 7.0, Rally, HP QC, Curl 7.36, Selenium, Cucumber
Reporting Tools	Jasper Reports 6.0, Crystal Reports XI, SSRS 5.0
Methodologies	Agile, waterfall, TDD (Test-Driven-Development), Scrum
Developer IDE Platforms	Eclipse, JBuilder, Net Beans 8.0.2, IntelliJ 2017.1, STS 3.8.3, GITHUB 2.12.0
Build Tools	Ant 1.10, Maven 3.3.9, Gradle 3.4.1
Web Services	SOAP 1.2, REST 2.0, JAX-WS, JAX-RPC, JAX-RS, Apache Axis

PROFESSIONAL EXPERIENCE:

Client: Verizon – Irving, TX
Role: Sr. Java Full Stack Developer
Responsibilities:

September 2022- present

- Led **Agile Scrum, Kanban** development processes, driving **sprint planning, backlog prioritization, stand-ups, and retrospectives**, improving team velocity and delivery efficiency.
- Developed **UI components** with **Angular 14, React.js, TypeScript, HTML5, CSS4, RxJS**, implementing **lazy loading and virtual DOM** for optimized rendering performance.
- Designed and implemented **RESTful APIs, GraphQL** services using **Java 17, Node.js, Express.js, Spring Boot**, enabling seamless integration between distributed systems.
- Refactored **monolithic applications** into **microservices architectures** with **Spring Boot, Spring Cloud, API Gateway**, enhancing modularity, scalability, and deployment flexibility.
- Optimized **backend performance** using **Spring Data JPA, Hibernate ORM, QueryDSL**, reducing **query execution time by 35%** and ensuring efficient transactional data operations.
- Integrated **cloud-native storage and computing** solutions using **AWS (EC2, S3, RDS, Lambda), Azure (Blob Storage, Functions)**, improving fault tolerance and system resilience.
- Managed **containerized deployments** using **Docker, Kubernetes, Helm charts**, automating orchestration, scaling, and service discovery in cloud environments.
- Established **CI/CD automation pipelines** with **Jenkins, GitLab CI/CD, GitHub Actions**, ensuring zero-downtime deployments and rollback capabilities.
- Enhanced **application security** by implementing **Spring Security, OAuth2, JWT, RBAC**, ensuring secure authentication and API access management.
- Designed and optimized **relational and NoSQL databases** using **MySQL, PostgreSQL, MongoDB**, implementing **indexing, partitioning, and caching** to improve query performance and data integrity.
- Implemented **event-driven architectures** using **Apache Kafka, RabbitMQ, Redis Pub/Sub**, enabling **real-time data streaming, messaging, and system decoupling**.
- Developed **batch processing pipelines** using **Spring Batch, Apache Spark, Snowflake**, ensuring **high-volume data processing efficiency**.
- Designed **real-time communication features** using **WebSockets, Socket.io**, enabling interactive applications like live chat and notifications.
- Designed and implemented **Stock Ownership Plan (SOP) solutions** for enterprise clients, ensuring **compliance with SEC regulations, efficient tracking of stock grants, vesting schedules, and equity compensation**.
- Developed and optimized **stock plan management platforms** with **Node.js, Angular, MongoDB**, handling **stock option grants, RSUs, performance shares, and equity compensation**, enhancing real-time reporting and accessibility.
- Configured **log aggregation and monitoring** solutions using **Grafana, New Relic, ELK Stack**, improving observability and real-time incident response.
- Automated **infrastructure provisioning** with **Terraform, AWS CloudFormation, Ansible**, ensuring **scalable and resilient cloud deployments**.
- Enhanced **performance tuning and load testing** using **JMeter, Gatling**, ensuring **system stability under peak loads** and optimizing CPU/memory utilization.
- Optimized **API performance** using **GraphQL, API Gateway, Redis caching**, reducing **network latency and improving data retrieval efficiency**.
- Led **DevOps initiatives** implementing **blue-green deployments, canary releases, automated rollback strategies** with **Kubernetes, Docker Swarm**.
- Mentored **junior developers** by conducting **code reviews, architecture discussions, best practice workshops**, fostering **continuous improvement and knowledge sharing**.

Environment: Agile Scrum, JavaScript (ES6+), TypeScript, React.js, Angular 14, HTML5, CSS4, REST APIs, Node.js, Express.js, MySQL, MongoDB, Docker, Kubernetes, Jenkins, Git, JIRA, Java 17.

Client: Ameriprise Financial, Minneapolis

July 2021 – August 2022

Role: Java Full Stack Developer

Responsibilities:

- Led **Agile Scrum** development processes, actively participating in **sprint planning, backlog grooming, stand-ups, and retrospectives** while managing development workflows using **JIRA** to ensure seamless project execution.
- Engineered and maintained **scalable SPAs** using **Angular 10, RxJS, TypeScript, HTML5, CSS4**, implementing **lazy loading, modular architecture, and state management** to enhance performance, responsiveness, and maintainability.
- Designed and developed **RESTful APIs** using **Node.js, Express.js, Java 8**, integrating **MongoDB and MySQL** with optimized **schema design, indexing, and query optimization** to support high-performance data access.
- Transformed **monolithic applications** into **microservices architectures** using **Spring Boot, Spring Cloud, API Gateway**, improving **system modularity, scalability, and fault tolerance** while streamlining **third-party integrations**.

- Implemented **robust security measures** using **Spring Security, OAuth2, JWT, and RBAC**, ensuring **secure authentication, authorization, and data protection** across distributed systems.
- Deployed and orchestrated **containerized applications** using **Docker and Kubernetes**, automating **scaling, load balancing, service discovery, and rolling updates** for **high-availability environments**.
- Automated **CI/CD pipelines** using **Jenkins, GitLab CI/CD, GitHub Actions**, reducing **manual deployment overhead**, **accelerating release cycles**, and ensuring **production stability**.
- Integrated **event-driven messaging systems** using **Apache Kafka, RabbitMQ, and Redis Pub/Sub**, enabling **real-time processing, message-driven architecture, and asynchronous data streaming**.
- Developed **high-performance batch processing pipelines** with **Spring Batch and Apache Spark**, optimizing **large-scale data transformations and ingestion workflows**.
- Optimized **MongoDB performance** by implementing **replication, sharding, indexing, and caching strategies**, improving **query execution, data integrity, and disaster recovery**.
- Designed **real-time communication features** with **WebSockets and Socket.io**, enabling **instant notifications, live updates, and interactive user experiences** in web applications.
- Designed and implemented **Stock Ownership Plan (SOP) solutions** for enterprise clients, ensuring **compliance with SEC regulations**, efficient **tracking of stock grants, vesting schedules, and equity compensation**.
- Developed and optimized **stock plan management platforms** with **Node.js, Angular, MongoDB**, handling **stock option grants, RSUs, performance shares, and equity compensation**, enhancing **real-time reporting and accessibility**.
- Configured **enterprise-grade monitoring and logging** using **Grafana, New Relic, AWS CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana)**, enhancing **observability, incident resolution, and system reliability**.
- Implemented **Infrastructure as Code (IaC)** with **Terraform and AWS CloudFormation**, automating **infrastructure provisioning, configuration management, and multi-cloud deployments**.
- Spearheaded **architecture discussions, code reviews, and mentoring sessions**, ensuring **technical excellence, adherence to best practices, and continuous skill development within teams**.

Environment: Java 8, Node.js, Angular 10, HTML5, CSS3, MongoDB, SQL, AWS (Lambda, CloudWatch), GCP (Compute Engine, Kubernetes), Docker, Jenkins, Git, Swagger, JUnit, Mockito, Apache Kafka, RabbitMQ, JIRA.

Client: Mitsubishi Motors Franklin, TN

Nov 2019 – June 2021

Role: Sr. Java Full Stack Developer

Responsibilities:

- Developed and maintained **high-performance SPAs** using **React.js, TypeScript, Redux, JavaScript (ES6+), HTML5, CSS4**, ensuring **efficient state management, modularity, and optimized rendering** through **Virtual DOM and lazy loading**.
- Designed and implemented **React component libraries** using **Material-UI, Styled Components, and Emotion**, ensuring **reusability, maintainability, and a consistent user experience** across applications.
- Optimized **React performance** by implementing **memoization (React.memo, useMemo)**, **code splitting**, and **server-side rendering (SSR) with Next.js**, improving **initial load times and reducing re-renders**.
- Integrated **RESTful APIs and GraphQL** with **React.js**, enabling **efficient data fetching, caching, and real-time updates** using **Apollo Client and React Query**.
- Built **real-time features** using **WebSockets, Socket.io, and EventSource**, ensuring **seamless live updates, notifications, and chat functionality** in applications.
- Developed and optimized **React hooks and context API** for **global state management, API data fetching, and performance improvements**, reducing **prop drilling and unnecessary re-renders**.
- Implemented **Redux middleware (Redux Saga, Redux Thunk)** to handle **side effects, asynchronous API calls, and complex state management scenarios**, improving **app scalability and maintainability**.
- Migrated legacy **class-based React components** to **modern functional components with React Hooks**, enhancing **code readability, maintainability, and performance**.
- Designed and developed **progressive web applications (PWAs)** using **React.js and Workbox**, enabling **offline capabilities, push notifications, and background sync** for enhanced user engagement.
- Integrated **React Testing Library, Jest, and Cypress** to ensure **unit, integration, and end-to-end testing**, improving **code quality and reducing production defects**.
- Developed and automated **CI/CD pipelines** for React applications using **Jenkins, GitHub Actions, and GitLab CI/CD**, ensuring **seamless deployments and automated testing**.
- Configured **error tracking and performance monitoring** for React applications using **Sentry, LogRocket, and New Relic**, enabling **real-time issue detection and debugging**.
- Enhanced **SEO and page speed performance** using **React Helmet, server-side rendering (SSR) with Next.js, and preloading techniques**, ensuring **better search engine rankings and improved user retention**.

- Integrated **OAuth2, JWT authentication, and role-based access control (RBAC)** in React applications, securing **user sessions and API communications**.
- Developed **multi-environment configurations** for React applications, enabling **dynamic API endpoints, environment-based feature toggling, and secure key management**.
- Built **responsive, mobile-first designs** using **React.js, Tailwind CSS, Bootstrap, and Styled Components**, ensuring **cross-browser and cross-device compatibility**.
- Led **code reviews, architecture discussions, and best practice adoption** for React projects, mentoring junior developers and driving **frontend development standards**.
- Implemented **feature flags and A/B testing strategies** using **LaunchDarkly and Firebase Remote Config**, enabling **incremental rollouts and data-driven decision-making**.
- Integrated **real-time analytics and user behavior tracking** using **Google Analytics, Segment, and Mixpanel**, improving **business insights and user experience personalization**.

Environment: Java 8, Spring Boot, React.js, Node.js, REST APIs, Docker, Kubernetes, MongoDB, Azure, AWS, Kafka, Git, Jenkins.

Client: Aditya Birla Health Insurance Co. Limited India

Jan 2017 – March 2019

Role: Java Full Stack Developer

Responsibilities:

- Worked in **Agile Scrum and TDD** methodologies, managing **sprint planning, backlog grooming, retrospectives, and tracking tasks** using **JIRA**.
- Developed **single-page applications (SPAs)** using **Angular 6, TypeScript, HTML5, CSS, Bootstrap, jQuery, AJAX**, implementing **lazy loading, modular architecture, and optimized UI components** for enhanced user experience.
- Optimized **Java 8** backend using **Streams API, Lambda expressions, Optional**, improving **data processing efficiency and reducing computational overhead**.
- Designed and developed **Spring Boot microservices**, integrating **Spring Security, OAuth2, JWT** for **authentication, authorization, and API security**.
- Implemented **Hibernate ORM with JPA**, optimizing **query execution, caching strategies, and transactional consistency** for better **database performance**.
- Automated **infrastructure provisioning and deployments** using **AWS CodePipeline, CloudFormation, CodeBuild, CodeDeploy**, ensuring **scalable and reliable application releases**.
- Deployed **containerized applications** using **Docker and Kubernetes**, orchestrating **Spring Boot microservices** for **high availability, auto-scaling, and fault tolerance**.
- Integrated **event-driven messaging** using **Apache Kafka, RabbitMQ, ActiveMQ**, enabling **asynchronous communication and real-time data processing**.
- Developed **RESTful APIs** using **Swagger/OpenAPI**, integrating with **GraphQL, MongoDB**, enabling **efficient data interactions and API documentation**.
- Designed **real-time event-driven workflows** using **Azure Function Apps, SQL Azure, Event Hubs, and Service Buses**, automating **business processes**.
- Conducted **unit, integration, and regression testing** using **JUnit, TestNG, Mocha, Jasmine, Karma, Selenium WebDriver**, ensuring **high test coverage and reliability**.
- Streamlined **CI/CD pipelines** using **Jenkins, Azure DevOps, Git**, automating **build, test, and deployment workflows** for production releases.
- Configured and optimized **Redis.io adapters for Node.js**, enabling **high-performance caching, pub-sub messaging, and NoSQL data storage**.
- Enhanced **monitoring and logging** using **Log4j, App Insights, Log Analytics**, ensuring **efficient debugging, system observability, and proactive issue resolution**.
- Deployed **Spring Boot applications on Google App Engine (GCP)**, leveraging **cloud-native solutions** for **high-performance hosting**.
- Managed **distributed NoSQL databases** like **MongoDB, Cassandra, HBase**, ensuring **optimized indexing, high availability, and efficient data retrieval**.
- Developed **test automation frameworks** using **Selenium WebDriver, JMeter**, improving **testing efficiency and ensuring system stability**.
- Customized **JIRA workflows and API integrations**, generating **automated reports and insights** to track **project progress and defect resolution**.

Environment: Agile, Java 8, JavaScript, Angular 6, Node.js, MongoDB, Spring Boot, Microservices, REST APIs, Docker, Kubernetes, AWS, GCP, Git, Jenkins, JUnit, Log4j.

Client: Shoppers Stop India.

Jun 2014 – Dec 2016

Role: Java Full Stack Developer

Responsibilities:

- Spearheaded **Agile Scrum** development, overseeing **sprint planning, backlog grooming, retrospectives**, and utilizing **JIRA** for project tracking, risk mitigation, and milestone alignment.
- Engineered **SPAs** using **Angular 4/2, TypeScript, HTML5, CSS3, Bootstrap, JavaScript, jQuery, AJAX**, implementing **lazy loading, modular architecture, and optimized state management** for enhanced UI performance.
- Architected **microservices** with **Spring Boot, Spring Cloud**, designing **RESTful APIs, API Gateway, and OAuth2 authentication**, ensuring scalability, security, and seamless communication.
- Optimized **Java 8** backend by leveraging **Lambda expressions, Streams API, CompletableFuture, Optional**, improving concurrent data processing and execution speed.
- Strengthened authentication and authorization using **Spring Security, OAuth2, JWT, RBAC**, ensuring secure data access and identity management.
- Enhanced database performance with **Hibernate ORM, JPA**, optimizing **query execution, caching, and transactional consistency** for efficient data persistence.
- Automated **cloud infrastructure** provisioning and deployments on **AWS ECS, Lambda, S3, CloudFormation, CodePipeline, CodeBuild, CodeDeploy**, ensuring high availability and fault tolerance.
- Orchestrated **containerized microservices** using **Docker, Kubernetes (AKS, OpenShift, AWS EKS)**, implementing auto-scaling, rolling updates, and blue-green deployments.
- Designed **event-driven architectures** with **Apache Kafka, RabbitMQ, ActiveMQ**, enabling asynchronous messaging and distributed data processing.
- Developed **GraphQL APIs** integrating with **Spring Boot, MongoDB**, enabling structured and efficient data retrieval.
- Established **CI/CD pipelines** with **Jenkins, GitLab CI/CD, Ansible, Terraform**, ensuring fast, automated deployments with rollback capabilities.
- Implemented **serverless computing** using **Azure Function Apps, SQL Azure, Event Hubs, Data Sync jobs**, optimizing workflow automation and cloud-based event processing.
- Optimized performance using **Redis Cache, Gemfire**, enhancing API response times and backend efficiency.
- Enhanced monitoring and logging with **Log4j, Grafana, App Insights, Log Analytics, AWS CloudWatch, ELK Stack**, ensuring real-time diagnostics and proactive issue resolution.
- Deployed **containerized microservices** on **Google Cloud Platform (GCP)** using **Compute Engine, Kubernetes**, improving resource utilization and cloud scalability.
- Led **test automation** using **JUnit, Mocha, Jasmine, Karma, Selenium WebDriver**, ensuring high test coverage and stability in software releases.
- Developed **data pipelines** using **Apache Kafka, MongoDB, SQL databases**, facilitating real-time data streaming and analytics.
- Implemented **Drools Rule Engine** for modular business rule automation, enhancing system flexibility.
- Designed **Angular 4/2 component libraries**, standardizing UI development and improving maintainability.
- Managed **NoSQL databases** like **MongoDB, Cassandra**, optimizing indexing, sharding, and replication for high availability.
- Configured **Spring Transaction Management**, defining isolation levels, rollback strategies, and timeout policies to maintain ACID compliance.
- Automated **JIRA workflows**, integrating APIs for ticket management, sprint analytics, and defect tracking, enhancing team collaboration and efficiency.

Environment: Java 8, Spring Boot, Angular4/2, REST APIs, Hibernate, Docker, Kubernetes, AWS, GCP, MongoDB, SQL, Kafka, Git, Jenkins, JUnit, Log4j.
