
PROFESSIONAL SUMMARY

Cybersecurity Engineer with 5+ years of expertise in safeguarding enterprise systems and network infrastructures. Proficient in developing and implementing advanced threat detection, vulnerability management, and endpoint security strategies across diverse environments, including IoT ecosystems, cloud infrastructures, and embedded systems. Demonstrated success in reducing security incidents by up to 65%, enhancing incident response times by 40%, and optimizing rule sets to achieve a 99% reduction in false positives. Experienced in leveraging tools such as CrowdStrike, Tenable Nessus, Palo Alto Firewalls, and AWS Scout Suite for robust security posture. Skilled in network architecture design, firewall migration, and cryptographic implementations with a focus on secure communications. Adept at collaborating with global clients and cross-functional teams to deliver innovative security solutions, ensuring compliance, scalability, and operational excellence.

WORK EXPERIENCE

Morgan Stanley, USA

Role: *Cyber Security Engineer*

05/2024 - Present

- Spearheaded comprehensive Information Security initiatives, enhancing Data Loss Prevention, CrowdStrike Endpoint Detection and Response (EDR), Forcepoint Data Security, Arctic Wolf Threat Intelligence, AWS Security, and Vulnerability Management, resulting in a fortified security posture.
- Partnered with major clients (UHG, DreamWorks, GE, Hasbro, Atari) to develop and implement threat detection strategies, leveraging Arctic Wolf's Managed Detection and Response (MDR), reducing security incidents by 50%.
- Led vulnerability assessments for critical infrastructure using tools like CrowdStrike, Rapid7, and Tenable Nessus, identifying and mitigating high-risk vulnerabilities across various industries, including media, automotive, IoT ecosystems, and embedded systems (AUTOSAR).
- Directed Endpoint Security management across multiple platforms (Windows, Linux, OSX), analyzing and triaging viruses, malware, and other security events via CrowdStrike Falcon, ensuring robust network defense and extending security protocols for IoT environments.
- Advanced data analysis, anomaly detection, and cryptographic implementations using XQL queries, Forcepoint's behavioral analytics, and Arctic Wolf's threat insights, significantly enhancing threat detection capabilities and incident response times for PKI-based environments.
- Conducted comprehensive security audits on AWS infrastructure, utilizing Scout Suite to recommend strategic upgrades that addressed critical vulnerabilities, integrating Forcepoint's cloud security solutions and implementing TLS protocols for secure communications.
- Achieved a 99% reduction in false positive alerts and a 65% reduction in cyber-attack incidents through strategic rule optimization and event correlation across CrowdStrike Falcon, IDS/IPS, and firewall platforms, while enhancing security in SecOC implementations and cryptographic keying mechanisms.

Version 1, India

Role: *Cybersecurity Analyst*

12/2020 - 11/2022

- Spearheaded initiatives to proactively detect and neutralize phishing email threats, achieving a 30% reduction in successful phishing attempts through enhanced security measures.
- Revolutionized incident response protocols, resulting in a 40% faster reaction to security incidents and breaches, thereby minimizing potential damage and recovery time.
- Led vigilant monitoring efforts to detect signs of attacks, intrusions, or unauthorized activities, maintaining a 95% success rate in threat identification and network integrity.
- Directed the identification and eradication of numerous phishing domains targeting reputable organizations, cutting potential security breaches by 50% and bolstering overall digital security posture.
- Implemented blacklisting of approximately 1000 phishing domains, significantly diminishing the risk of security breaches by 70%.
- Managed and resolved escalated issues from global Google offices, ensuring timely and effective solutions with a 90% satisfaction rate.
- Transitioned to a specialized role within Gmail-Inbound Ops (Anti-Phishing team), dedicating efforts to mitigate phishing threats with a focus on maintaining operational standards and achieving targeted outcomes.
- Conducted comprehensive analyses of phishing email attacks and compiled detailed performance metrics reports, contributing to strategic decision-making and a 15% increase in operational effectiveness.

Version 1, India

Role: *Network (Security Engineer/Administrator)*

01/2018 - 12/2020

- Designed and executed LAN/WAN network architectures across multiple environments, enhancing performance and scalability. Implemented key network monitoring tools such as SNMP Server, PRTG, Net Brain, and SolarWinds tool to optimize visibility and proactive management.
- Spearheaded network upgrades including the transition from Cisco Catalyst 6500 to Nexus 5K switches, and improved network efficiency through the strategic use of VLANs, trunking, and EtherChannel. Managed Quality of Service (QoS) settings on Cisco routers to prioritize traffic effectively.

- Enhanced network security by managing robust configurations on Checkpoint firewalls, implementing IDS systems, and configuring access control lists. Successfully migrated to Palo Alto Firewalls (PA 5050 & PA 5260) using the PAN migration tool MT3.3.
- Administered OSPF routing for various operational scales, and configured critical network services including DNS, DHCP, FTP, and HTTP within a Windows environment. Developed comprehensive security policies including NAT, PAT, VPNs, route maps, and ACLs across diverse platforms.
- Deployed and maintained AAA servers (RADIUS and TACACS+) to secure authentication for remote VPN users, ensuring rigorous access control and enhancing network security infrastructure.
- Conducted extensive firewall configuration and management using Palo Alto devices, employing advanced features like App-ID, User-ID, and Content-ID. Performed detailed security log analysis with tools such as Splunk, ELK, and PAN-OS Commander.
- Installed and managed various Cisco Catalyst switches and orchestrated critical network protocols such as EIGRP and BGP. Configured IPsec Site-to-Site VPNs using 3DES and AES/AES-256 with Cisco ASA Firewalls for secure data transmission.
- Led the redesign of network infrastructures for small offices and campus branches, integrating changes that bolstered both voice and data systems. Managed F5 Big-IP LTM 1600 for optimal load balancing and high availability, and supported secure remote access with BIG-IP Edge Portal and Client.

EDUCATION

Master of Science in Cybersecurity | Grand Valley State University, Michigan, USA | **01/2023 - 12/2024**

TECHNICAL SKILLS

Network Device:

- **Switches:** Configured and upgraded Cisco switches (Catalyst 9k,6k series) and Nexus 9k Series (Datacenter)
- **Routers:** Configured and upgraded Cisco ISR 3k ,4K series and ASR 5k,9k routers.
- **Firewalls:** Palo Alto Hardware Appliance PA 400 & PA 5000,7000 series (Datacenter) Centralized management (Panorama M-500) Appliance, VM-300, VM-500, VM1000 (Virtual appliance)
- **Load Balancing:** F5 Networks (Big-IP) LTM 8800 and 6400, GTM, ASM, APM, Access Gateway, Secure Gateway.

IDS/IPS: Snort, Sourcefire.

Endpoint Security: Crowd strike Falcon, Windows, Linux, OSX

Data Security & Loss Prevention: Forcepoint Data Security, AWS Data Loss Prevention

Threat Detection & Incident Response: Arctic Wolf MDR, Crowd strike EDR, IDS/IPS, Firewall Management

AAA Architecture: TACACS+, RADIUS, Cisco ISE

Network Management: Cisco ACI. Cisco DNA Center, SNMP, Wireshark, GNS3, SNMP, SolarWinds, Infoblox.

Features and Services: TCP, UDP, NAT, DNS, DHCP, Syslog, NTP, TACACS+, RADIUS, IPsec, SSL VPN.

Networking Protocols: OSI Model, TCP/IP, UDP, IPv4/v6, ARP, Subnetting, STP, RSTP, VTP, DTP, VLAN,802.1q, EtherChannel, AGP, PAGP, DTP, DHCP, DNS, HSRP, GLBP, VRRP, OSPF, EIGRP, BGP, Route Filtering, Redistribution, Summarization, Static Routing, ICMP, SNMP.

Framework: Metasploit, NIST 800-171, ISO 27001/27002, GDPR, HIPPA, CIS Controls

Toolkit:

- **Vulnerability Scanning and Management:** Nessus, OpenVAS, Black Duck, Net sparker, HP fortify
- **Penetration Testing and Exploitation:** Metasploit, Burp Suite pro, SQL-map, Hydra
- **Web Application Security Testing:** Dir-Buster, Wappalyzer, Web Inspect, IBM Appscan, OWASP ZAP Proxy, Nikto
- **Network Security and Scanning:** NMAP, NETCAT, Wireshark
- **Password Cracking and Authentication Testing:** Air cracking
- **Log Management and Analysis:** Splunk

Operating Systems: Windows, Linux, Unix and Mac OS

Databases: MySQL, Oracle, MSSQL

Languages: Python, JavaScript, XML, C#, SQL, WordPress, Net

Cyber Security: STIX, TAXII, Trustar

DLP: Websense, Symantec & McAfee

SIEM: HP ArcSight, Splunk, Net forensics, QRadar

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA)
- Palo Alto Networks Certified Network Security Engineer (PCNSE)
