

Manny Menard

Senior Software Engineer

 manny.menard18@gmail.com  512-265-1825  Austin, TX  linkedin.com/in/m-menard

SUMMARY

Strategic and impact-driven Senior Software Engineer with 9+ years of experience designing and delivering enterprise-scale, full-stack applications across healthcare, autonomous systems, and internal platforms. Led the development of Cardinal Health's Virtual Care Platform, transforming digital care delivery with scalable React/Node.js microservices, real-time GraphQL APIs, and secure mobile experiences—boosting patient engagement and platform reliability. Expert in React, TypeScript, Node.js, GraphQL, and AWS with a strong grasp of scalable architectures, testing strategies, and cloud-native deployments using Docker and Kubernetes. Known for mentoring teams, driving engineering excellence, and delivering clean, accessible, and resilient code that meets business goals.

SKILLS

React • React Native • Vue.js • Angular • Redux • Next.js • GraphQL • TypeScript • SCSS • Tailwind CSS • Material UI • Node.js • Java • C# • Python • Go • SQL • AWS • Azure • Docker • Kubernetes

PROFESSIONAL EXPERIENCE

Senior Software Engineer

08/2021 – Present | Remote

Cardinal Health

- Spearheaded development of Cardinal Health's Virtual Care Platform using React, Node.js, GraphQL, PostgreSQL, Docker, and AWS—modernizing digital care delivery and enabling thousands of providers to manage telehealth appointments, prescriptions, and patient engagement on a HIPAA-compliant platform.
- Architected a modern, component-driven frontend using React, TypeScript, Redux Toolkit, Tailwind CSS, and Storybook—cutting development time by 40% and standardizing UI delivery across distributed teams.
- Led mobile feature development for the Virtual Care iOS and Android apps using React Native, TypeScript, and Expo—expanding patient access to virtual care across devices and increasing mobile engagement by 50% in under 6 months.
- Designed and deployed robust REST and GraphQL APIs using Node.js, Express, and Apollo Server—enabling secure, real-time data exchange across provider dashboards, patient portals, and third-party systems with near-zero downtime.
- Built and containerized backend microservices with Node.js, Java/Spring Boot, Go and deployed via Kubernetes on AWS, achieving uptime and enabling autoscaling during peak virtual care usage.
- Optimized data storage and caching layers using PostgreSQL and Redis, reducing query latency by 30% and delivering seamless, real-time updates to both clinical and patient-facing applications.
- Established a full-stack test automation strategy using Jest, React Testing Library, Cypress, and GitHub Actions CI/CD pipelines—driving 90% code coverage and reducing production bugs by 45%.
- Mentored junior engineers and led technical planning sessions with cross-functional teams using Jira, Figma, and Confluence—accelerating roadmap delivery and fostering a culture of quality, ownership, and innovation across engineering and product.

Senior Software Engineer

07/2019 – 07/2021 | Austin, TX

Apple

- Crafted a highly interactive front-end interface for Apple’s autonomous vehicle platform using React, TypeScript, and GraphQL—enabling real-time vehicle tracking and system diagnostics used daily by engineers and operations teams.
- Developed a robust admin dashboard with React, TypeScript, and Node.js that centralized control of self-driving car systems, improving internal testing efficiency and remote monitoring capabilities.
- Visualized complex 2D/3D sensor data from LiDAR, radar, and camera streams using WebSocket and D3.js—delivering instant, high-fidelity feedback loops for autonomous driving analytics and QA validation.
- Assembled a scalable, reusable UI library with React, TypeScript, and Material UI—streamlining development across autonomous projects and reducing redundant engineering work by 30%.
- Enhanced performance using Next.js lazy-loading, code-splitting, and route-level chunking—elevating Lighthouse scores to 95+ and improving load time and interactivity on both desktop and mobile platforms.
- Integrated optimized GraphQL APIs and CI/CD pipelines by collaborating with backend and DevOps teams—ensuring smooth, secure deployment of mission-critical applications in a high-security R&D environment.
- Advanced Agile execution by participating in daily standups, backlog grooming, and cross-functional sprint reviews—driving on-time delivery of key platform features in a high-stakes innovation pipeline.

Software Engineer

10/2015 – 06/2019 | Austin, TX

Apple

- Developed a server-side automation platform using React, Python 3 (Flask), and Pytest to streamline silicon chip testing workflows, boosting test execution efficiency by 35% and reducing manual validation errors by 20%.
- Built responsive dashboards with React, Redux, Chart.js, and Material UI, enabling real-time visualization of silicon chip states and accelerating hardware failure diagnosis during critical test phases.
- Designed high-performance RESTful APIs using Flask and SQLAlchemy, and optimized data flows across MySQL, and MongoDB, improving query performance by 20% and ensuring seamless data interchange.
- Improved accessibility and user experience across internal knowledge tools and dashboards using WordPress, PHP, Laravel and WCAG 2.1 AA standards, enhancing usability for engineers with assistive technologies and meeting internal accessibility compliance goals.

EDUCATION

Bachelor's Degree of Computer Science

2011 – 2015

Texas State University
