

Max Ma

Email: max.jian.ma@gmail.com | Phone No: 214-796-0660

Summary

- 8+ years of experience in Application Design, Development, Implementation and Maintenance of web-based n-tier architecture systems using J2EE Technologies in and Insurance domains.
- Extensive knowledge on Core Java technologies such as Multi-Threading, Exception Handling, Reflection, Collections and Streams.
- Strong working experience with Spring Framework, which includes usage of IOC/Dependency Injection and different Spring modules like Core Container, Data Access/Integration, Web, Boot and AOP in Web applications.
- Good experience on Java 8 features like Lambda Expressions, Stream API, Collections and Function Interface.
- Experience using Hibernate for mapping Java classes with databases using and Hibernate query language (HQL).
- Proficient in Java/J2EE Design Patterns including singleton, Model View Controller (MVC), Data Access Object (DAO).
- Leveraged the company's internal PaaS platform to design and deploy critical business services, enabling rapid development, automated CI/CD pipelines, and secure production environment management.
- Utilized AWS services (e.g., EC2, ECS, DynamoDB, CloudWatch, and Lambda) to design and deploy a scalable microservices architecture, ensuring high availability for the global online store.
- Excellent experience with major relational databases Cassandra, MySQL and Oracle DB.
- Experienced in AWS Glue for ETL processes and Redshift for data warehousing, utilizing Postgres for database management. Proficient in containerizing applications with Docker, orchestrating them with Kubernetes, and monitoring application performance using Datadog to ensure high availability and optimized performance.
- Utilized Amazon Web Services (AWS) EC2 to deploy Docker containers with both monolith and Micro Services architecture.
- Extensive experience in Software Configuration Management using Version Control Software such as Git.
- Experience in building tools like Splunk, Maven, logging with Log4j, Test Driven Development using Junit, Mockito.
- Extensively worked on Jenkins for Continuous Integration from pulling up the code from version control tools and building Artifacts using build tools like Maven, Gradle.
- Excellent communication, interpersonal and analytical skills and a highly motivated team player with the ability to work independently.

Technical Skills

Programming Languages: Java | HTML | SQL | C# | TypeScript

Framework: Hibernate | Spring MVC | Spring AOP | Spring Boot | Log4j | Maven | .Net | Node.js

Web Services: REST

Client Technologies: Java Script | CSS3 | HTML 5

Web technologies: Servlets | Node.js | JDBC | Java Beans | Web Services | Jenkins | Splunk |

Puppet | Kubernetes | Docker | AWS | EC2 | ECS

Databases: Oracle Database | MongoDB | MySQL | No-SQL | Cassandra | Solr Admin

Java IDE: IntelliJ IDEA | Eclipse

Tools: Azure | SQL Developer | Postman | Git | Kafka | Linux

Work Experience

Client: Apple

Austin, TX.

Project: Apple Online Store

Mar 2022 to Current

Description:

Apple's online store is a premier destination for purchasing a wide range of Apple products and accessories. It provides easy navigation, detailed product info, and secure shopping. Customers enjoy fast, free shipping, AppleCare support, and a user-friendly interface for a seamless, convenient shopping experience.

Responsibilities

- Participated in all phases of the software development lifecycle, including analysis, design, development, integration, and testing.
- Revamped the interaction service by incorporating a thread pool, significantly improving its performance. This enhancement increased upload speeds by 90%, resulting in faster data transfers and a more efficient system overall
- Integrated Kafka for real-time data streaming in the Apple Online Store (AOS) project, improving microservice communication and ensuring efficient message processing within the AWS cloud environment.
- Led sprint planning sessions to define deliverables for the Apple Online Store, ensuring alignment with business requirements and technical feasibility.
- Collaborated with cross-functional teams, including front-end, back-end, and AWS specialists, to break down complex epics into manageable user stories.
- Partnered with key stakeholders, including product managers, QA teams, and business units, to gather requirements and refine feature priorities for the Apple Online Store.
- Maintained and prioritized the backlog for Apple Online Store microservices, factoring in customer impact, resource constraints, and technical dependencies.
- Proficient in building dynamic, responsive web applications using Angular, incorporating reusable components and optimizing performance with advanced front-end techniques
- Implemented Kafka as part of a microservices architecture, facilitating real-time data integration and event-driven communication, which improved system responsiveness and reduced latency across services in the Apple Online Store
- Tracked, identified, and resolved bugs in legacy code by using Jenkins and splunk debugging service. Enhanced code quality through strategic fixes and optimizations, ensuring robust performance and maintainability. Updated documentation to reflect changes and support ongoing development.
- Utilized Docker to containerize microservices, providing consistency between development, staging, and production environments. This approach enhanced scalability and simplified deployment processes.
- Managed and orchestrated containerized applications using Kubernetes, enabling automatic scaling, self-healing, and efficient resource management in a cloud-based environment.
- Leveraged Puppet for automating infrastructure provisioning and configuration management, ensuring consistent setups across environments and reducing manual errors in production.
- Integrated Splunk for centralized logging and monitoring of the entire infrastructure. Real-time data analysis and alerting helped proactively address performance issues and optimize application uptime.
- Expanded the data service's functionality to deliver enhanced and more precise search capabilities. Addressed and resolved previous data search inaccuracies by implementing targeted bug fixes and improvements.

- Contributed to the development of new support service APIs. Designed, implemented, and tested multiple APIs to enhance functionality and reliability by using Spring framework.
- Collaborated with the front-end team to resolve API data transmission errors, effectively debugging and fixing issues to ensure accurate and reliable data flow.
- Worked with cross-functional teams at Apple Online Store to trace and debug legacy code, helping to pinpoint and address key vulnerabilities and issues.
- Redesigned text display and search functionalities across multiple modules to resolve issues with incorrect results during concurrent operations
- Utilized Solr Admin and Bitbucket for managing, modifying, adding, and calibrating database content to ensure accuracy and performance.
- Deployed tested versions using InfraRED, facilitating accurate and efficient deployment of fully-tested software.
- Experienced in managing communication and interaction between microservices, including effective debugging to resolve integration issues and ensure smooth operation across distributed systems.
- Used GIT for version control, create and merge branches and pull requests.
- Utilized Linux for project development, including scripting, system monitoring, and managing deployments, ensuring a stable and efficient development environment.
- Monitored the error logs using Jenkins and Splunk to manage the issues/project workflow.

Environment: Java 17, Spring Core, Spring AOP, Spring MVC, Spring Boot, Restful, EC2, Jenkins, Splunk, infraRED, SolrAdmin, Bitbucket, GIT, Kafka, AWS, Linux, Angular.

Client: ASCENDIX TECHNOLOGIES

Dallas, TX.

Project: AscendixRE Land.

Nov 2020 to Mar 2022

Description:

AscendixRE Land is the Customer Relationship Management (CRM) software created for land brokers. Designed in partnership with leading land brokers and consultants, it has all key functionality to assist you in land management and selling land, farms, ranches, timberland and commercial land.

Responsibilities

- Involved in Full Life Cycle of Software Development from Analysis through Design, Development, Integration and testing phases.
- Used Core Java with multithreading, Concurrency, Exception Handling, File handling, IO, Generics and Java collections.
- Developed the applications using Spring framework including Spring Boot Spring and AOP
- Developed user interfaces which are single page applications using JavaScript, CSS3, HTML5, Angular.
- Developed the application using Java 8 and implemented its features like lambdas Expressions, Streams, functional interfaces, collectors, default methods
- Designed and developed persistence layer build on ORM framework and developed it using Hibernate.
- Implemented the application using the concrete principles laid down by several design patterns such as Business Delegate, Bean Factory, Singleton, and Observer.
- Designed and developed Micro Services based business components and RESTful service endpoints using Spring boot.
- Involved in deploying systems on Amazon Web Services Infrastructure services EC2, S3, RDS, SQS, and SNS.
- Designed various required for the project in MySQL database
- Extensively written unit test cases using Junit and followed TDD development model.
- Maven is used as a build tool and continuous integration is done using Jenkins.

- Used GIT for version control, create and merge branches and pull requests.
- Monitored the error logs using Log4J and used JIRA to manage the issues/project workflow.

Environment: Java 8, Spring Core, Spring AOP, Spring Boot, JavaScript, CSS3, HTML5, Angular, Hibernate, Restful, EC2, S3, RDS, SQS, SNS, MySQL, JUnit, Maven, Jenkins, GIT, Log4J, JIRA.

Client: Crossmark

Plano, TX.

Project: AXIS

June 2019 to Nov 2020

Description:

CROSSMARK is a leading sales and marketing services company that delivers smarter solutions for various clients. AXIS is a workforce management platform for activating, reporting, and providing insights on sales, merchandising, and engagement campaigns – located in one place, and updated in real-time. This framework provides mobile application enables ease of use, speed to results, and location accuracy for retail campaigns, in and out of the store, by delivering tailored solutions to retailers and manufacturers. AXIS uses a proprietary algorithm to align a diverse workforce, matching associates by location and qualifications. This enables us to increase agility and precision of workforce management.

Responsibilities

- Involved in all phases of the project from analysis and requirement phase to delivering the project.
- Implemented Core Java concepts like Multithreading, Concurrency, Exception Handling and Collections whenever necessary.
- Implemented the application using Spring IOC, Spring MVC, Spring AOP, Spring Boot and handled the security using Spring Security.
- Developed Client-side pages using HTML, CSS, JavaScript, jQuery and Angular.
- Used Java 8 to derive concepts like functional interfaces, Stream API, Producer, Consumer, Bi Functional, etc.
- Used Hibernate concepts such as inheritance, lazy loading, locking, and transactions.
- Involved in identifying and implementation of different J2EE design patterns like Singleton and DAO.
- Designed and developed Web Services to provide services to the various clients using Restful.
- Involved in writing SQL and Stored Procedures for handling complex queries with help of TOAD and access them through Java Programs from Oracle Database.
- Worked on Amazon Web Services (AWS) for a multitude of applications utilizing the AWS stack such as S3 Bucket, SNS, SQS and RDS.
- Using GIT as source control management giving a huge speed advantage on centralized systems that must communicate with a server and Using Jenkins as build management tool for continuous integration process.
- Using the defect tracking tool JIRA to create and track the defects during QA phase of the project.

Environment: Java, JEE, Spring IOC, Spring MVC, Spring AOP, Spring Boot, Spring Batch, Spring Security, HTML, CSS, JavaScript, jQuery, Angular, Hibernate, Restful, Oracle DB, S3, SNS, SQS, RDS, GIT, Jenkins, JIRA.

Client: Sovereign Bank

Dallas, TX.

Project: Sovereign Desktop

Nov 2017 to June 2019

Description:

Sovereign Bank is a leading global provider of comprehensive wealth solutions to Manager of Banks, Trust & Private Wealth Institutions, Investment Advisors, Investment Managers. Sovereign Desktop is a single integrated platform delivered via the Internet that provides users with the information and functionality needed to enable sales, marketing, advice, service, administration and business management.

Responsibilities

- Involved in various phases of Software Development Life Cycle (SDLC) such as requirements gathering, modelling, analysis, Design, Development, and Testing.
- Implemented Multithreading, Concurrency, Exception Handling, Generics, and Collections whenever necessary.
- Used Spring AOP for solving crosscutting concerns like keeping logged data and transactions details etc.
- Used HTML5, CSS3, Java Script, Angular as frontend building Environment.
- Implemented design Patterns like Singleton, Factory, Template and DAO patterns.
- Used RESTful web services to communicate with different layers within the application.
- Developed SQL, PL/SQL scripts to modify the existing database according to the requirement changes and developed Stored Procedures to interact with database using Oracle.
- Implemented Log4j mechanism for logging at different modules within the application.
- Worked on JIRA for tracking and updating the JIRA tickets.
- Used Jenkins as a Continuous Integration server to configure with GitHub and Maven.

Environment: J2EE, Spring AOP, Spring Batch, HTML5, CSS3, JavaScript, Hibernate, Restful, Oracle DB, Log4J, JIRA, Jenkins, GitHub, Maven.

Client: Fannie Mae

Plano, TX.

Project: ULDD

Dec 2014 to Nov 2017

Description:

Uniform Loan Delivery Datasets (ULDD) systems. ULDD allows lenders to deliver loans to Fannie Mae for securitization and/or cash through a single interface while allowing the lenders to import, manually add loans, run edits and validate the data in addition to accessing reports.

Responsibilities

- Involved in complete SDLC management using Waterfall Process - Requirements gathering, Design, Analysis, Development and Testing.
- Implemented core java concepts like Collections, Threads, Serialization, Generics.
- Implemented Spring AOP in exception handling, which it reduces the development time to handle the exceptions.
- Developed the presentation layer using HTML, CSS, Java Script, jQuery.
- Developed applications using JPA and Hibernate persistent framework, developed persistent classes, hibernate-mapping files (hbm.xml), hibernate query language (HQL).
- Implemented the application using the concrete principles laid down by several design patterns such as Composite View, Bean Factory, Singleton, Data Access Object and data transfer object.
- Developed JUnit test cases for Unit Testing and functional testing for various modules and prepared Code Documentation for future reference and upgrades.
- Worked on tools like GIT for version control.
- Used JIRA to assign, track, report and audit the issues in the application.

Environment: J2EE, Spring AOP, HTML, CSS, JavaScript, jQuery, Hibernate, Oracle DB, JUnit, GIT, JIRA
