EDUCATION

University of Utah: M.S., Computer Science; **GPA:** 3.92/4

Aug 2023 - March 2025

Teaching Assistant: Operating systems, Human Aspects of Security and Privacy

Aug 2024 - Present

Anna University: B.Eng, Electronics and Communication Engineering; **GPA:** 8.46/10

Jul 2016 - April 2020

EXPERIENCE

Software Engineer

Western AgCredit

Jan 2025 - Present

- Developed loan calculators, and director expense reimbursement using Angular, .NET Core, and SQL, enhancing efficiency and accuracy
- Built REST APIs and UI/UX mockups for seamless integration, enabling loan and credit teams across 7 Western Agcredit branches to streamline loan operations.

Software Developer Intern

Homegenius, a Radian company

May 2024 - Dec 2024

- Worked on .NET RESTful APIs and React/Next.js UI components to enable location-based property searches and real-time property valuations.
- Optimized data processing by migrating 40+ LINQ queries to stored procedures handling 10M+ housing listings.
- Migrated homegenius Real Estate software from .NET MVC to .NET Core and React, boosting application performance by 35%

Software Engineer Intern

University of Utah Information Technology

Jan 2024 - May 2024

- Architected RESTful APIs using Spring Boot 3 for a student payment reminder system, ensuring high performance and scalability, and implemented Spring Security for robust authorization, enhancing application security.
- Built the frontend of the Repay application using Angular 17, integrating Single Sign-On login authentication with role-based route authorization and asynchronous data handling with RxJS.

Software Engineer

Psoig Digital Pvt.Ltd

Nov 2020 - May 2023

- Designed and Developed a Field Data Capturing App using .NET framework and Angular, transforming job data collection for Quanta Services Group's pipeline integrity operations, serving over 10,000 users through microservices.
- Created a .NET Windows Service to manage triple the previous payroll generation load and automated deployment processes for 3 web applications and windows service using Azure CI/CD pipeline.
- Revamped DOCX generation for foremen payslips using Open XML with in-memory processing, predefined templates, and asynchronous methods, reducing processing time and enabling high-volume document creation.
- Integrated recommendation engine using ML.NET to suggest equipment for foremen during timesheet submissions, using Matrix Factorization based on past usage patterns.
- Designed RESTful APIs using .NET Core, Optimized existing stored procedures and SQL queries and built responsive UIs using React for clients improving response time by 60%.
- Incorporated Web Speech API for voice assistance, enhancing user experience in daily timesheet submissions.
- Managed a team of 6 developers using Agile Scrum methodology, handling release activities, sprint planning, and KT sessions, boosting team efficiency by 35%.

SKILLS

Languages: Python, C/C++, SQL, C#, PHP, JavaScript, HTML5, CSS, jquery, TypeScript, Java

Frameworks: ASP .NET Core, MVC, Entity Framework, React, Angular, Spring Boot, Laravel, Next.js, Tensorflow, PyTorch

Tools: Azure, Git, Jenkins, Bitbucket, Azure CI/CD, Postman, SQL Server, MySQL, lighthouse, MongoDB, Docker, Linux, HotDocs

CERTIFICATIONS

- Microsoft Certified:** [Azure Developer Associate](#)

Jan 2025 - Jan 2028

- AWS Certified:** [Solutions Architect - Associate](#)

Feb 2025 - Jan 2028

PROJECTS

Detecting Vulnerabilities in Smart Contracts - Python, Pytorch, Jupyter.

Jan 2024 - May 2024

- Under the guidance of professor Mu Zhang, Conducted a comprehensive study on recent Machine Learning methods focusing on Adversarial Attacks.
- Worked on vulnerability detection models for smart contracts using GraphSAGE and GCN (Graph Convolutional Networks), leveraging Python, pandas, NumPy, and TensorFlow.
