

Gandhi Morampudi

Senior .NET Developer

+1 240 728 8121

gandhinani9@gmail.com

Professional Summary

- Developed cloud-native applications using .NET Core microservices, RESTful APIs, and Azure Functions.
- Proficient in building and securing APIs with ASP.NET Core, OAuth, JWT, TLS/SSL, and Kerberos.
- Hands-on experience with Azure DevOps for CI/CD pipelines, source control, and agile delivery.
- Built enterprise solutions using Microservices Architecture with strong presence in AbbVie and State of Georgia projects.
- Strong front-end development experience using React.js, HTML5, CSS3, Bootstrap, and JavaScript.
- Extensive experience with .NET Core (2.2, 3.0, 6.0, 7.0) and .NET Framework (4.0+) across multiple projects.
- Implemented Role-Based Access Control (RBAC) and ensured compliance with government and HIPAA standards.
- Skilled in SQL Server, Oracle, and MongoDB, including performance tuning and query optimization.
- Expertise in ORM tools like Entity Framework, Dapper, and ADO.NET for data access layers.
- Designed and optimized databases with stored procedures, triggers, and indexing strategies.
- Delivered scalable web applications using MVC architecture in major projects (AIG, AbbVie, Reliance, State of Georgia).
- Applied Agile and Scrum methodologies, collaborating with cross-functional teams for high-quality output.
- Integrated Hangfire for background job processing and workflow automation in .NET applications.
- Developed and maintained WCF services and Web APIs in enterprise-level systems.
- Proficient in scripting and automation using PowerShell for deployment and monitoring.
- Strong understanding of OOP principles including Encapsulation, Inheritance, Polymorphism, and Abstraction.
- Experience in secure application development and cloud security best practices.
- Adept at mentoring teams, conducting architecture reviews, and driving engineering excellence.
- Used Microsoft Visual Studio as the primary IDE across all development roles.
- Long-standing experience with C# since 2010 across various business domains.

Technical Skills:

Programming Languages	C#.Net, VB.Net, C, HTML, T/SQL, Web Services
Web Technologies	ASP.NET, MVC, ADO.NET, VB.NET, WCF, AJAX, HTML5, CSS3, JavaScript, Typescript, Angular, React JS, Bootstrap, AJAX, jQuery
Services	Web Services, WCF & RESTful Services
IDE	Visual Studio, SQL Server Management Studio
Scripting Languages	VB Script, JavaScript, Ajax, jQuery, Angular8,12,14
XML Technologies	XML, XSL, XSLT, XSD
UI	HTML, CSS, Bootstrap, Responsive Web Design, Angular, React
Database	SQL Server, My SQL, Oracle, MongoDB,PostgreSQL
Cloud Platform	Azure
Business Intelligence	SSIS, SSRS
Version Control	Git, TFS
Other	Win forms, ADFS, LINQ, Entity Framework, IIS, Style Cop
Libraries & Frameworks:	Angular

Education & Certifications:

- Bachelor’s Degree in Electronics and Communication Engineering , JNTU, Hyderabad, India – 2014

Project Experience:

SGS Bloomfield, NJ
june 2024 – Present
Role: Senior .NET Developer

Project Description: Developed a web-based municipal tax management system with core modules for both citizens and municipal employees. The system enabled citizens to pay taxes and apply for services online. Additionally, managed the deployment process across development and QA environments.

Responsibilities:

- Evaluate and utilize the new features and enhancements introduced in .NET Core 7 to improve application performance, scalability, and development speed.
- Developed dynamic web applications using ASP.NET MVC, ASP.NET Web API, and ASP.NET Core MVC, ensuring responsive and feature-rich user experiences.
- Developed middleware integration modules using Java to bridge legacy eligibility systems with modern .NET Core microservices, ensuring seamless data exchange.
- Utilized Java RESTful APIs for backend services in data validation and processing for state-level eligibility and billing systems.
- Worked with Java-based DevSecOps pipelines using JIRA and Bitbucket, enabling continuous delivery of microservices to Azure environments.
- Utilized nouns for resource naming and HTTP methods (GET, POST, PUT, DELETE) for resource manipulation
- Developed and deployed microservices-based applications, integrating with third-party SaaS and government applications using RESTful APIs.
- Developed and optimized .NET Core 6.0 applications using ASP.NET, MVC, C#, and Angular, ensuring high performance and maintainability.
- Created secure authentication mechanisms with JWT, and role-based access control (RBAC) for cloud applications.
- Developed reusable Angular components, directives, and services to streamline frontend development.
- Migrated legacy Windows Forms applications to modern web-based solutions using ASP.NET Core and React.
- Conducted security assessments and cloud security implementations, ensuring compliance with government cybersecurity standards.

- Led architecture design reviews, ensuring best practices in cloud architecture, API security, and microservices design.
- Provided technical leadership and mentoring to development teams, promoting best practices in cloud architecture, security, and development methodologies.
- Conducted system performance optimizations and troubleshooting using distributed tracing and observability tools.
- Worked closely with business stakeholders and cross-functional teams to align cloud solutions with strategic business objectives.

Environment & Tools: Web Services, .NET Core 6.0, ASP.NET MVC, C#, Angular, REST APIs, SQL Server, Entity Framework, PowerShell, SSRS, SSIS, Kafka, Node.js, TFS, Git, JWT

Corporate Web Portal , CGI, USA

Oct 2023 – June 2024

Role: Senior .NET Developer

Project Description: The project involved designing and modernizing enterprise applications for pharmaceutical and healthcare data management using cloud-based architecture and microservices. The focus was on building scalable, secure, and high-performance applications leveraging .NET Core, Angular, cloud platforms (AWS, Pivotal Cloud Foundry), and containerization (Docker, Kubernetes). The solution integrated data pipelines, ETL processes, and microservices for real-time data processing and visualization.

Responsibilities:

- Developed enterprise applications using ASP.NET, C#.NET, .NET Core 2.0, MVC, SQL Server, and Angular 8, ensuring high performance and maintainability.
- Designed and implemented microservices-based architecture, utilizing Node.js, MongoDB, Elasticsearch, and Express.js for cloud-native development.
- Developed cloud-based solutions leveraging Pivotal Cloud Foundry (PCF), AWS, and containerized deployments using Docker and Kubernetes.
- Led Angular-based UI development, implementing modular, reusable components, enhancing maintainability and scalability.
- Designed and implemented RESTful APIs and WCF Services to enable seamless communication between application layers.
- Designed microservices using Java Spring Boot for drug data processing pipelines, integrated with .NET front-end and Kafka messaging.
- Implemented backend APIs in Java for secure CRUD operations on Oracle databases, especially for high-throughput reporting tasks.
- Utilized Java tools for log monitoring and batch job processing, supporting large-scale pharmaceutical datasets in real time.
- Developed ETL pipelines using PL/SQL, optimizing Extract, Transform, and Load (ETL) processes for pharmaceutical data processing.
- Integrated Kafka, RabbitMQ, and Redis for asynchronous messaging and real-time data streaming.
- Designed and developed Windows applications using WPF, WinForms, and PRISM framework for data visualization and reporting.
- Implemented CI/CD pipelines using Jenkins, Git, and TFS, automating build, test, and deployment workflows.
- Worked closely with business analysts and stakeholders to gather requirements and define technical solutions.
- Designed and optimized SQL Server databases, implementing stored procedures, views, and triggers for efficient data processing.
- Developed and automated unit tests and functional testing frameworks, ensuring high code quality.
- Implemented role-based authentication and secure API access controls, ensuring HIPAA compliance for sensitive healthcare data.
- Provided technical documentation, including system architecture, functional specifications, and design documents.
- Collaborated in modernizing legacy Silverlight and WCF applications into modern cloud-native applications, improving scalability and performance.

Environment & Tools: Web Services, ASP.NET, .NET Core 2.0, C#, MVC, WPF, Angular 8, Node.js, SQL Server, Docker, Kubernetes, Jenkins, TFS, Git, RabbitMQ, Kafka, PL/SQL, Redis, PowerShell, RESTful APIs, WCF Services, Automation Testing, Microservices

Western Alliance Bank , Arizona

March 2022 – April 2023

Role: .NET Developer

Project Description: The project involved developing and maintaining web applications for Banking management. The focus was on enhancing UI/UX, implementing interactive front-end components, and integrating backend services using ASP.NET MVC, WCF, and SQL Server. The application was designed to be responsive and scalable, utilizing Angular, Bootstrap, and jQuery for a dynamic user experience.

Responsibilities:

- Developed ASP.NET MVC applications with C#, ensuring modular and maintainable code structure.
- Designed and implemented Single Page Applications (SPA) using Angular 4/5, TypeScript, and HTML5, improving responsiveness and user interaction.
- Created and consumed WCF web services for backend communication, integrating business logic and data services.
- Designed UI components and wireframes using Adobe Photoshop, Dreamweaver, and Adobe Illustrator, ensuring an intuitive user interface.
- Developed cross-browser compatible UI pages with HTML5, SCSS, Bootstrap, and jQuery to enhance application responsiveness.
- Contributed to Java-based modules for claims data enrichment and backend processing, integrated with ASP.NET MVC web applications.
- Supported Java batch jobs for nightly data reconciliation and financial reporting pipelines.
- Created Java-based scripts for automated report generation (Business Objects/Crystal Reports) and integration with existing .NET services.
- Implemented front-end event handling using Angular, handling click, change, and form submission events for better user interaction.
- Developed stored procedures, functions, and triggers in SQL Server, optimizing database transactions and performance.
- Created and maintained master pages with reusable UI components, including icons, logos, buttons, and navigation elements.
- Built client-side validation logic using TypeScript and jQuery, ensuring seamless user input handling.
- Designed and integrated RESTful APIs for data retrieval and processing, ensuring secure and efficient communication between application layers.
- Developed PowerShell scripts for automated deployment, reducing manual deployment efforts.
- Worked in an Agile environment, collaborating with UX designers, business analysts, and QA teams to meet project deadlines and feature requirements.
- Used Team Foundation Server (TFS) for version control, build automation, and project tracking.

Environment & Tools: ASP.NET MVC, C#, SQL Server, WCF, Angular 4/5, TypeScript, HTML5, CSS3, SCSS, JavaScript, jQuery, Kendo UI, Bootstrap, RESTful APIs, AJAX, Entity Framework, Web Forms, PowerShell, Agile, TFS, Adobe Photoshop

Sunbelt Rentals, Gaithersburg, MD 20877, USA

Feb 2021 – March 2022

Role: .NET Developer

Project Description: The project focused on developing and maintaining an e-commerce platform for **Sunbelt Rentals**. The system enabled product catalog management, customer authentication, order processing, and payment integration. The application was built using ASP.NET MVC, C#, SQL Server, and WCF services, ensuring scalability and security while enhancing the user experience with AJAX, jQuery, and React JS.

Responsibilities:

- Designed and developed web pages using ASP.NET, C#.NET, HTML, CSS3, JavaScript, and jQuery to ensure a responsive user interface.
- Implemented validation controls and business logic for user authentication, password management, and role-based access.
- Developed dynamic and reusable UI components using ASP.NET Web Forms and WPF, improving site navigation and user experience.
- Built and integrated WCF and RESTful services for seamless communication between the frontend and backend layers.
- Developed Entity Framework-based database access layers using ADO.NET and LINQ, optimizing data retrieval and manipulation.

- Developed reusable JavaScript and Java integrations for inventory validation and third-party payment gateway APIs.
- Built Java-based service layers for dynamic price and promotion engines within the digital retail platform.
- Supported hybrid backend architecture involving both .NET and Java web services for order and catalog management.
- Designed and optimized SQL Server stored procedures, triggers, and queries, ensuring efficient database operations.
- Developed SSRS reports to generate real-time data insights for sales, inventory, and customer activity tracking.
- Implemented ASP.NET MVC 4 to structure the application using Model-View-Controller (MVC) principles.
- Developed business and data components using C# and ADO.NET, ensuring modular code structure and maintainability.
- Conducted unit testing and functional testing using NUnit and Karma, improving application reliability.
- Used Karma Runner and Jasmine for writing and executing client-side test cases in AngularJS.
- Published and deployed ASP.NET applications on IIS servers, ensuring optimal performance and security.
- Managed version control and source code repositories using Team Foundation Server (TFS).
- Enhanced user experience and interactivity by implementing AJAX, Bootstrap, and jQuery for seamless page updates.
- Collaborated with business analysts and stakeholders to gather requirements and refine technical solutions.

Environment & Tools: ASP.NET MVC 4, C#, SQL Server, WCF, Entity Framework, IIS 7.5, JavaScript, jQuery, HTML5, CSS3, React JS, Bootstrap, AJAX, NUnit, Karma, XML, Team Foundation Server (TFS), Windows 7

Spectra, Hyderabad, India

Sep 2016– Feb 2021

Role: .NET Developer

Project Description: The project involved developing and maintaining web applications for insurance policy management and claims processing. The focus was on efficient data processing, secure API development, and server management using C#, Web API, and SQL Server. The application was designed to handle large-scale government data, ensuring high availability and security through Microsoft IIS and best coding practices.

Responsibilities:

- Developed web-based applications using C#, ASP.NET, and Web API, improving data handling and system efficiency.
- Designed and optimized SQL Server 2008 databases, writing stored procedures, functions, and triggers to enhance performance.
- Maintained Java-based web service endpoints for inter-departmental government data exchange.
- Assisted in the transition of legacy modules from Java-based frameworks to modern ASP.NET services.
- Used Java servlets to handle bulk data submission and validation from external government portals.
- Managed web server operations using Microsoft IIS, ensuring high availability, security, and performance optimization.
- Utilized Microsoft Visual Studio for software development, debugging, and performance enhancement.
- Implemented unit testing using NUnit, ensuring code reliability and software quality.
- Employed Castle Windsor for dependency injection and modular development, improving maintainability and scalability.
- Debugged and troubleshooted application issues, ensuring smooth functionality and minimal downtime.
- Followed software development lifecycle (SDLC) best practices, from requirement gathering to deployment and maintenance.
- Provided technical support and application maintenance, addressing user-reported issues and performance optimizations.
- Engaged in continuous learning and technology upgradation, staying updated with emerging .NET technologies.
- Collaborated with cross-functional teams, contributing to requirement analysis, system design, and software enhancements.

Environment & Tools: C#, ASP.NET, Web API, SQL Server 2008, Microsoft IIS, Visual Studio, NUnit, Castle Windsor
