

Nikhil Goud

+1 (913) 363-6376 | nikhilg1599@gmail.com

Summary:

- **6+ years** of experience in **software design, development, and architecture**, with **5+ years** focused on **Android applications**, and a strong foundation in **Java** and **Kotlin**.
- Proficient in **Android Enterprise Application development**, leveraging cutting-edge tools like **Jetpack Compose**, **Kotlin Coroutines**, **Hilt (dependency injection)**, **Room Database**, **Kotlinx.Serialization**, **Flow**, and **StateFlow** for building modern, **reactive applications**.
- Expert in designing and implementing **Android applications** across multiple device types (**phones, tablets, and wearables**) with a focus on **multiresolution UI**, **performance optimization**, and **device resource management**.
- Deep understanding of **Android architecture components**: **Activities**, **Services**, **Broadcast Receivers**, **Content Providers**, **Fragments**, **Intents**, **ViewModel**, **LiveData**, **StateFlow**, and **Navigation Components** to create intuitive, scalable, and maintainable applications.
- Experienced in **RESTful APIs**, **GraphQL**, and **WebSocket** integration for connecting **Android applications** to web services and third-party APIs, ensuring efficient data exchange and **offline capabilities**.
- Skilled in data serialization using tools such as **Moshi** and **Kotlinx.Serialization**, **Room Database** for modern **SQLite abstraction**, and **SQLCipher** for database encryption.
- Expertise in **Google Play Services**, including **Location Services**, **Firebase**, **Push Notifications**, and **Google Maps SDK**, to build **location-based apps** and handle background tasks effectively.
- Experienced with debugging tools: **Android Debugging Bridge (ADB)**, **Logcat**, **DDMS**, **Android Studio Profiler**, **LeakCanary**, and **Crashlytics** to ensure smooth development and application performance.
- Strong knowledge of modern **Android UI/UX practices** with **Jetpack Compose**, **Material Design**, and **ConstraintLayout** to create flexible and responsive layouts across different screen sizes and devices.
- Proficient in **multithreading**, **asynchronous programming**, and **networking protocols** like **HTTP**, **TCP/IP**, **UDP**, **DIAL**, **SSDP** to develop high-performance, networked **Android apps**.
- Experienced in developing **cross-platform mobile applications** with tools like **Flutter** and **React Native** in addition to **native Android development**.
- Advanced experience with **CI/CD pipelines**, **Jenkins**, **GitLab CI**, and integrating automated testing tools such as **JUnit**, **Espresso**, **Robolectric**, and **Mockito** for **continuous integration** and delivery.
- Solid experience in **version control** using **Git**, **SVN**, and project management with **JIRA**, **Asana**, and **Trello** for efficient team collaboration in **Agile**, **Kanban**, and **Waterfall** environments.
- Proficient in implementing **unit tests**, **UI tests**, and **test automation** to ensure robust, bug-free software delivery, and integrating these into continuous testing pipelines.

- Expertise in **networking** and **security protocols**, including **OAuth**, **SSL/TLS encryption**, and **JWT** for secure API communication.
- Skilled in implementing **push notifications**, **background tasks**, **job scheduling**, and **alarm management** for efficient background operations using **JobScheduler**, **WorkManager**, and **AlarmManager**.
- Experienced in working with third-party libraries such as **Volley**, **Retrofit**, **Picasso**, **Butterknife**, **Shimmer**, and **ViewPager Indicator** to enhance app functionality and performance.
- Passionate about learning new technologies and enhancing development processes, with strong interpersonal and **communication skills** to collaborate effectively with cross-functional teams.
- Demonstrated ability to lead and collaborate in **offshore teams**, with an aptitude for **problem-solving**, **troubleshooting**, and finding innovative solutions in complex software projects.

Education:

Jawaharlal Nehru Technological University, Hyderabad, India

Bachelor of Technology in Computer Science and Engineering (August 2014 - May 2018)

- Gained a strong foundation in **Data Structures and Algorithms**, **Object-Oriented Programming (OOP)**, **Operating Systems**, **Computer Networks**, and **Database Management Systems (DBMS)**.
- Studied **Software Engineering**, **Mobile Application Development**, **Web Technologies**, **Artificial Intelligence**, and **Cloud Computing**, strengthening my problem-solving and development skills.
- Developed expertise in **Java**, **Python**, **JavaScript** and **App Development**, focusing on mobile application architecture, UI/UX design, and performance optimization.
- Completed hands-on projects using **Java** and **Python**, implementing **object-oriented design principles**, **multithreading**, **data structures**, and **algorithms** to build scalable and efficient applications.
- Learned **Multithreading**, **Asynchronous Programming**, and **Dependency Injection** to build efficient and scalable applications.
- Developed problem-solving abilities through **competitive programming** and **algorithmic challenges**, applying theoretical knowledge to real-world scenarios.
- Completed a **final-year project** focused on Android application development, implementing real-world solutions and enhancing hands-on technical skills.
- Developed a **weather application** using **Java**, **Retrofit**, and **JSON parsing**, integrating a **RESTful API** to fetch real-time weather data and displaying it through a **dynamic, user-friendly UI with Material Design**. Implemented **location-based weather updates** using **GPS** and **fused location services**, along with **offline caching** for improved user experience.

Technical Skills

Languages	Java, Kotlin, Python, JavaScript, TypeScript, SQL
Mobile Development	Android (Java, Kotlin), Jetpack Compose, Android SDK, Firebase, GraphQL, Retrofit, Room Database, SQLite, WorkManager
Frameworks/Architectures	MVVM, MVP, Clean Architecture, Jetpack Compose, Hilt (Dependency Injection), Dagger, Coroutines, Kotlin Flow, LiveData
Web Development	HTML5, CSS3, JavaScript, TypeScript, ReactJS, AngularJS, Vue.js, Node.js, Express.js, Next.js
Databases	MySQL, PostgreSQL, MongoDB, Firebase Realtime Database, SQLite, Room Database, SQLCipher, GraphQL (Apollo Client)
Version Control	Git, GitHub, GitLab, SVN, Bitbucket
CI/CD	Jenkins, GitLab CI, CircleCI, GitHub Actions
Tools/IDE	Android Studio, Visual Studio Code, IntelliJ IDEA, Xcode, Eclipse, JDK, Gradle, Maven, Docker
Web/Application Servers	Nginx, Apache Tomcat, Node.js, AWS Lambda, Google Cloud Functions
Cloud Platforms	AWS, Google Cloud Platform (GCP), Microsoft Azure
Testing & Automation	JUnit, Espresso, Mockito, Robolectric, Selenium, Cypress, JUnit5
Containerization	Docker, Kubernetes
Operating Systems	Windows 10/11, Linux, macOS, Android
Agile Methodologies	Scrum, Kanban, Jira, Asana

Professional Experience

Android Application Developer

First Citizens Bank, San Francisco, CA

Nov 2023 – Present

Link: https://play.google.com/store/apps/details?id=com.mcom.firstcitizens&hl=en_US&pli=1

Description:

First Citizens Digital Banking gives you a powerful, comprehensive set of mobile banking tools that work across all your devices – mobile phone, tablet, and computer. Log in from your Android device quickly and securely using facial recognition, fingerprint authentication or a 4-digit passcode.

Responsibilities:

- Participated in the complete **SDLC** (Software Development Life Cycle) process, including **requirement analysis, development, testing, deployment**, and enhancement of mobile application features.
- Implemented **Kotlin Coroutines** for asynchronous background processing to improve app performance and responsiveness, replacing traditional callback mechanisms.
- Led the **MVP architecture** (Model-View-Presenter) for modular app development, ensuring maintainability and scalability.
- Managed and enhanced features such as **Profile Management, UI/UX Framework**, and **mobile banking** functionalities within the app.
- Developed and maintained features on the **Firebase Mobile Platform**, integrating **Firebase Cloud Messaging, Firebase Authentication**, and **Firestore** for real-time data synchronization and user authentication.
- Worked with **GCP** (Google Cloud Platform) and **Hybrid App Frameworks** to develop cross-platform features.
- Built and deployed **Universal Application Flags** for consistent data transfer across multiple app modules and layers.
- Created multiple app variants using **Android Flavors** and product flavors for customized builds.
- Developed **Cloud-Native Apps** and integrated **Serverless Computing** for scalability and cost-efficiency.
- Implemented **OAuth authentication** to securely manage user data and perform secure transactions.
- Utilized **Dagger 2** for **Dependency Injection (DI)** to streamline app architecture and improve code maintainability.
- Conducted **unit testing** using **JUnit** for every feature developed and ensured high-quality code.
- Integrated **UI automated testing** using **Espresso** to ensure consistent app behavior across devices.

- Conducted **performance testing** and debugging of Android applications using **DDMS**, **Logcat**, and **Android Profiler** to resolve issues across multiple devices.
- Developed detailed video tutorials and articles for educating users about different payment options and app features.
- Led **AB testing** for feature validation and stakeholder reviews, improving app user experience based on data-driven insights.
- Integrated **Adobe Analytics** for tracking user behavior and conducted **reactive programming** to adjust the app's response to user interactions.
- Utilized **Room Database** for managing local data, creating **entities**, **DAOs**, and integrating them with **Kotlin Coroutines** for seamless background operations.
- Leveraged **Kotlin Coroutines** and **Flow** for efficient handling of background tasks and **reactive programming** within the app.

Android Application Developer

Zoho Corp, Austin, TX

Aug 2021 – Oct 2023

Link: https://play.google.com/store/apps/details?id=com.zoho.zsm&hl=en_US

Description:

Zoho Billing is an end-to-end billing solution to help businesses manage billing complexities, handle customer life cycles, automate revenue recovery, and track business performance.

Responsibilities:

- Led the **UI design**, development, and **testing** of features, improving user experience and design responsiveness across devices.
- Worked with **WebViews** and **ListViews**, implementing adapters to display lists and data from databases effectively.
- Collaborated with the **web application team** to ensure smooth integration between the mobile application and the web-based backend.
- Integrated **Google Maps API** to display the nearest healthcare providers and urgent care centers based on the user's location.
- Implemented efficient **XML parsing** using **DOM Parser** to handle structured data from web services.
- Used **SQLite** to store user healthcare preferences, insurance details, and medication history for personalized features and search optimization.
- Managed **HTTP requests** and **server responses**, ensuring correct data retrieval and feed parsing from RESTful APIs.
- Developed and enhanced features with strict focus on **authorization** and **authentication** tokens to ensure secure access.
- Contributed to subsequent releases, implementing new features, enhancements, and bug fixes.
- Integrated appropriate **button** and **text field** event handlers, enabling desired actions for user interactions within the app.

- Utilized **AsyncTask** and **AlertNotification API** for **event reminder features**, improving user engagement and functionality.
- Worked with **RxJava** for asynchronous programming and **event-based programming** using **observer** and **subscriber** classes.
- Contributed to the '**Find Provider**' module that allows users to search for doctors based on proximity and specialty.
- Implemented **Location Manager** for location-based services and **Restful web services** with **JSON** for data exchange.
- Conducted testing on a variety of Android devices to ensure app stability and performance across different Android versions.

Environment:

- **Android Versions:** Android 4.2 – 6.0
- **Technologies:** SQLite, Eclipse IDE, Android APIs, RESTful Web Services, **DOM Parser**, XML, JSON, HTML, CSS, **Google Maps API**, GPS Service, Logcat, **ADT Plugin**, ADB, **GIT (version control)**, DDMS, Android Emulator
- **Tools:** **RxJava**, **AsyncTask**, **Alert Notification API**, **Location Manager**, **Google Maps API**

Android Developer

Workday – Seattle, WA

Mar 2020– Aug 2021

Link: https://play.google.com/store/apps/details?id=com.workday.workdroidapp&pcampaignid=web_share

Description:

The Workday app lets you manage tasks like submitting timesheets, viewing payslips, requesting time off, and connecting with teammates, all in one place. It also offers tools for managers to approve requests, manage payroll, and track employee performance. The app is secure, easy to use, and ensures real-time updates on the go.

Responsibilities:

- Used **Android resources (Drawables, Values, Menus, Strings, and Colors)** to implement scalable and efficient **UI components**.
- Implemented Intents for navigating between **activities, utilizing flags and filters** for **various app actions**.
- Created **Android Virtual Devices (AVD)** for testing and emulating the app across **multiple hardware profiles and Android versions**.
- Collaborated with **UI/UX designers** to design and implement responsive, **user-friendly** interfaces.
- Used **SharedPreferences** for storing **key-value pairs** and user data in a persistent manner.

- Developed **Broadcast Receivers** to detect system states (e.g., battery status) and prevent transactions under critical conditions.
- Implemented a **robust login screen** with front-end validation and parsed server responses for user feedback.
- Created **custom dialog boxes and Toast notifications** for confirming and validating user actions.
- Used **Typeface** class to apply custom fonts across views for improved app design.
- Followed **MVP architecture** pattern to separate concerns and improve code maintainability.
- **Built APKs using Apache Ant**, leveraging both **Eclipse GUI** and **command-line AVD** for **testing**.
- Worked with **Retrofit** to consume **RESTful web services** for seamless server communication.
- Integrated **ButterKnife** for view binding to reduce **boilerplate** code and improve readability.
- Used **Google Analytics** to track user behavior and improve app usage metrics.
- Leveraged **Picasso** for image loading and caching to ensure fast and smooth **UI performance**.
- Debugged the application using **ADB, Traceview, DDMS, and Logcat** for issue identification and performance optimization.
- Worked within an **Agile environment** with daily **scrums** to manage tasks and project progress.
- Utilized **JIRA** for issue tracking, bug tracking, and project management.
- Implemented **SQLite** for local data storage and **optimized database queries** for faster access.
- Managed **version control** using **Git, GitHub, and GitLab** for collaborative development.
- Coordinated project management and task tracking using **Trello** and monitored performance with **New Relic**.

Environment:

Technologies: Android SDK, Java SDK, RESTful Web Services, JSON, SQLite, Active

Android Tools: Android Studio, Eclipse IDE, Git, GitLab, GitHub, JIRA, Trello, New Relic

Libraries & Frameworks: Retrofit, ButterKnife, Picasso, Gson, Google Analytics

Debugging & Testing: ADB, Logcat, Traceview

Java Developer
Goibibo, Hyderabad, India
Aug 2018 – Feb 2020

Description:

Goibibo is a leading travel booking platform that allows users to seamlessly book **flights, hotels, buses, trains, and holiday packages** through its intuitive mobile and web interfaces. Designed for **fast and secure transactions**, the app offers real-time availability, competitive pricing, and features like **GoCash rewards, flexible payment options, and AI-powered recommendations**.

Responsibilities:

- Participated in the **complete SDLC** from **requirements gathering** and **analysis** to **conceptual design, detailed design, development, system testing, integration testing, and user acceptance testing (UAT)**.
- Worked in an **Agile environment**, collaborating with cross-functional teams to ensure timely delivery of features and enhancements.
- Utilized **Spring Framework** for building robust enterprise applications with a focus on modular architecture.
- Developed **Sequence and Class Diagrams** and produced detailed **design documents** to ensure clear development specifications.
- Performed **front-end validation** using **JavaScript**, enhancing user interaction and experience.
- Used **JSTL (JavaServer Pages Standard Tag Library)** for dynamic content generation in JSP pages.
- Developed and maintained various **web pages** using **JSP, Servlets, and JDBC**, ensuring efficient backend communication.
- Implemented **Session Beans** and **Entity Beans**, deploying on **WebSphere Application Server** for handling core business processes.
- Applied the **Session Façade Design Pattern** to optimize communication between the client and business logic layers.
- Implemented **logging** and **exception handling** mechanisms to enhance application reliability and ease of maintenance.
- Developed and executed **JUnit** tests for unit testing, ensuring robust and error-free code.
- Used **Subversion (SVN)** for version control, maintaining codebase integrity and facilitating collaborative development.
- Developed **DAO (Data Access Objects)** for efficient database interactions using **JDBC** and **Hibernate**.
- Actively participated in **unit testing** and **integration testing** to ensure seamless integration with other systems and components.
- Conducted **code reviews** to ensure adherence to best practices and coding standards.
- Extensively debugged applications, troubleshooting and resolving issues, while providing **production support** for post-release maintenance.

Environment:

- **Technologies:** Java (JDK 1.6), J2EE, Spring 3.0, Hibernate, Web Services (SOAP & RESTful), JAXB, Log4j
- **Tools:** Eclipse, JUnit, Subversion (SVN)
- **Databases:** Oracle
- **Web Technologies:** JSP, ANT, HTML, CSS, JavaScript, JSON, XML
- **Servers:** WebSphere Application Server
