Project Management
Engineering Services Manager
Data & Document Control Manager

Hello,

My name is Paul Ganeff, and I am currently seeking a position where I can leverage my extensive experience in Project Management, Engineering Support Services and Document and Data Control.

With over 20 years at Applied Materials, I have garnered significant expertise, especially within the Display Flexible Technology (DFT) group, Applied Global Services (AGS), and more recently through a decade of remote work. For more than 15 years, I spearheaded both the Engineering Services and Document Control teams for all Display products.

Within Engineering Services and Project Management, I managed a team responsible for ECO/ECR/Design, aiding Engineering and Operations engineers in the release of new products and updates to existing products. This encompassed documentation, drawing, ECO/ECR, and OEM support. Additionally, I oversaw the Project Request SharePoint database and Dashboard utilized by both Engineering and Operations staff.

On the Document Control side, I led a team of ECO/ECR managers and Document Control specialists who supported all aspects of new product releases and updates for Display products. I was accountable for managing the ECO/ECR process, which included data entry into SAP, overseeing ECO/ECRs via Core+, and managing documentation in Teamcenter. My responsibilities also include managing employee access requests to the Teamcenter Vault, as well as reviewing and approving various levels of access.

Further responsibilities included ownership of QMS documents related to the Engineering Change Order/Request process and management. I served as an audit representative for both internal and external Display audits and acted as a High IP representative, participating in monthly AMAT CAMG meetings. Additionally, I was tasked with managing and monitoring Confidential Asset Management Group (CAMG) training requirements for all Display employees.

Please feel free to contact me via email or the cell phone number listed above.

Sincerely,

Paul Ganeff
