

Prashanth Reddy
Network Security Engineer

Location: Chicago, IL | **Email:** gullapelliprashanth7989@gmail.com | **Contact:** (508) 619-9576

SUMMARY:

- Over 6 years of professional experience of expertise in implementing and troubleshooting various Network Technologies.
- Experience with legacy and Next Gen Firewalls that include Cisco ASA (5500 Series), Palo Alto (5000 Series), Check Point and FortiGate Firewalls. Worked on Installation of firewalls from scratch, migration and configuration of policies end to end.
- Exposure to Centralized management (Panorama, Forti-Manger) of firewalls in the environment, Log monitoring, generating reports, config backups, Perimeter firewalls, Server Farm firewalls.
- Deployed and integrated Cisco ACI with Nexus 9000 series switches, automating network configuration and improving visibility across multi-cloud and on-premises environments.
- Worked on AWS and Azure cloud configurations with respect to network connectivity and Security. JIRA for change management.
- Implemented and administered enterprise network infrastructure utilizing Juniper SRX and MX series routers, enhancing IPv4/IPv6 routing and security posture.
- Configured IPsec VPN tunnels and advanced firewall policies and Firepower series, ensuring secure communication between branch offices and headquarters.
- Configured and monitored F5 BIG-IP LTM and GTM devices, including iRules scripting and SSL offloading, to optimize application delivery and network traffic management.
- Leveraged Ansible for network automation across Palo Alto, Cisco, and Juniper devices, and used Splunk and SolarWinds for proactive monitoring and log analysis.

TECHNICAL SKILLS:

Router platforms: Cisco ASR (9901, 9910, 9912, 9922), Juniper SRX, MX, EX (240, 480, 960), Cisco ISR (8100, 8200, 8600 series)

Switch platform: Cisco 2900XL, 2950, 2960, 3560, 3750, 4500 and 6500, Nexus (2K, 5K, 7K and 9K)

Firewall: Cisco Firewalls (ASA 5505, 5510), Palo Alto Networks (PA 220, PA820, PA-2K, PA-3K and PA-5K). FortiGate (80F, 100F, 200F, VM04), Checkpoint.

Network Management/Monitoring: Solar winds, IPAM, and Cisco prime, Wireshark.

Tools: GNS3, VMware, JIRA

Load Balancers: F-5 BIG-IP LTM 2000, 3900, 5000, 6400, 6800 AND 8900. F5 i5000 NetScaler (Citrix), Cisco ACE, AVI LAN technologies: Ethernet, Fast Ethernet, Gigabit Ethernet, & 10 Gigabit Ethernet, Port- channel, VLANs, VTP, STP, RSTP, 802.1Q

Security Protocols: IKE, IPsec, SSL, AAA, Access-lists, prefix-lists, SSL-VPN

Networking Protocols: RIP, OSPF, EIGRP, BGP, ISIS, STP, RSTP, VLANs, VTP, PAGP, LACP, MPLS, HSRP, VRRP, GLBP, TACACS+, Radius, AAA, IPv4 and IPv6, Multicasting

Features & Services: IOS and Features, HSRP, GLBP, VRRP, IPAM IRDP, NAT, SNMP, SYSLOG, NTP, DHCP, DNS, TFTP and FTP Management, Open Stack

Cloud Platforms: Microsoft Azure, Amazon Web Services (EC2, VPC, Route53) Direct connect

PROFESSIONAL EXPERIENCE:

UHG, Chicago, IL

Feb 2024 - Present

Network security Engineer

- Migration of FortiGate devices to Forti Manager, streamlining centralized configuration management and improving policy enforcement across multiple network segments.
- Conducted testing and validation of migrated configurations, ensuring proper synchronization, policy consistency, and device reachability in a live environment.
- Designed and implemented FortiGate firewall security solutions, including Application Control, URL Filtering, Threat Prevention, and Data Filtering, enhancing network security and user access management.

- Configured and managed IPsec and SSL VPNs on FortiGate firewalls, ensuring secure remote access for employees while maintaining optimal network performance.
- Provided guidance and support for the ongoing migration efforts, ensuring all necessary configurations and documentation were in place for the future deployment of OSPF and BGP.
- Led the design for development of SD-WAN architecture with dual ISP redundancy, enhancing network resiliency and optimizing traffic flow between two hub locations.
- Planned the transition from static routing to OSPF (internal) and BGP (external) to improve dynamic route management and scalability across the network.
- Collaborated with stakeholders to review, refine, and document SD-WAN designs, facilitating smooth implementation and ongoing maintenance while ensuring alignment with business objectives.
- Created custom Ansible modules and Python scripts to address specific network security requirements and integrate with proprietary security solutions.
- Used Cisco ACI Policy Model to define application-centric policies for network traffic, including security, quality of service (QoS), and service chaining.
- Configured Cisco ACI Network Centric Mode to integrate existing network infrastructure with ACI fabric, enabling gradual migration and coexistence of traditional and policy-driven networking.
- Setting up the data center's foundation, including the Nexus 7010, 9300, 9400, 9800 switches (unified processing platform).
- Implementing Cisco Nexus switches in conjunction with Cisco servers and Fiber connection SANs to build an integrated solution that minimizes device latency.
- Developing from servers based on 6500 to platforms employing Nexus switches, the business's local connection was enhanced.
- Created intricate multi-ISP applications for Cisco switches (8200, 8500, 9300, and 9400 series) and routers (8600, 8200, 8100, ASR 9910, and 9906 Series).
- Worked on complex network issues related to reachability, Wi-Fi throughput, and printer connectivity by troubleshooting Jira tickets, ensuring timely resolution.
- Configured and deployed PoE switches, including enabling routing for enhanced security, and collaborated with teams to support network expansion and infrastructure upgrades.
- Worked on Splunk and Forti Analyzer for proactive monitoring, log analysis, and troubleshooting, improving network visibility and reducing incident response times.
- Conducted comprehensive network mapping and created detailed documentation using Microsoft Visio, enhancing network visibility and supporting future troubleshooting.
- Managed cloud infrastructure on AWS, ensuring seamless integration of network components, security configurations, and scalability for optimized performance and cost-efficiency.
- Established IPSEC site to site VPN tunnels between AWS and On Prem network devices including implementation of VPCs, subnets, and routing for secure.

AT&T, Dallas, TX

Jan 2023 – Dec 2023

Network Security Engineer

- Configured with Qualys evaluation of vulnerabilities, Splunk log tracking, Sourcefire, and Palo Alto IPS/IDS systems.
- Working on PA-5260, PA-5450, and PA-3440 series are just a few of the Palo Alto NGFW models that were set up and accepted to ensure optimal performance and secure operation.
- Deployed and managed Cisco ACI solutions, enabling automated and policy-driven network configurations across multi-cloud and on-premises environments.
- Configured Application Network Profiles (ANPs) and End Point Groups (EPGs) within Cisco ACI, ensuring optimal application performance and security through granular segmentation.
- Integrated Cisco ACI with existing network infrastructure, enhancing network visibility, automation, and security through a unified policy model.
- Monitored F5 BIG-IP devices, which included regular WIP and VIP configuration, SSL offloading management, and iRule scripting.
- I worked on iRules for Customized Traffic Management on BIG-IP r2000/r4000 and deployed iRules to implement custom logic for traffic management.

- Implemented Azure Virtual Networks (VNet) with subnetting, NSGs, route tables, and VNet peering to optimize network connectivity and security.
- Configured and managed Azure Firewall, Azure DDoS Protection, and Web Application Firewall (WAF) to enhance cloud security posture.
- Worked on implementing network security architectures using Azure Virtual Networks (VNETs), Network Security Groups (NSGs) and Azure Firewall.
- Installing internet connectivity so that several sets of Meraki MX65, MX65, and MX67 devices are connected to the router and enjoy advantages like increased security.
- Developed and set up Active Directory trusts, which allowed for resource usage and secure interaction between various domains and forests.
- Configured and managed enterprise network infrastructure using Cisco IOS and Junos, optimizing routing protocols (OSPF, BGP, EIGRP) and VLAN segmentation for improved network performance and security.
- Set up network equipment in a convenient clinical setting, such as Cisco switches, routers, firewalls, wireless LAN controllers, and connection points.
- Install Cisco routers ASR 9922, 9912, and 9901, especially in strategic areas, to guarantee a consistent and unbroken internet connection.
- Configured Guest Access solutions with Cisco ISE, enabling secure, time-limited network access for visitors while ensuring network isolation and monitoring.
- Used VIPTELA'S real-time analytics and monitoring tools to proactively identify and respond to network security threats.
- Setting up Juniper structures with more than 500 firewalls and a variety of Juniper hardware models, such as the SRX 340, SRX 550, and SRX 1600.
- Installed Routing Policy Language (RPL) on Nexus 7000 series switches, which allows for dynamic and adaptable routing administration to maximize network control and performance.

Comcast, Philadelphia, PA

Feb 2022 – Dec 2022

Network Engineer

- Set up and adjusted security rules on Palo Alto firewalls to control traffic, prevent unwanted access, and effectively identify and eliminate threats.
- Implemented migrations of several Palo Alto Next-Generation firewall models, such as PA-1410, PA-3430, and PA-5430 and acted as a key information center for developments in routing and SD-WAN.
- Monitored Palo Alto 5060-unit staging, arranging, and installation in data centers, including Panorama modifications to track, block, or permit firewall traffic.
- Used Prisma Access to enforce the Zero Trust principles, ensuring the safe access of more than 2,000 distant employees while maintaining consistent security standards across all online environments.
- Integrated analysis and tracking tools into Cisco ACI, making it easier to extract insightful data about traffic trends, network efficiency, and potential security threats.
- Worked on Cisco ACI safety measures were set up to continuously enforce security by dynamically adjusting to variations in network activity and software installation.
- Set up claims-based authorization rules in Active Directory Federation Services to implement attribute-based authentication and restricted access.
- Implemented and tailored Azure Monitor to track and collect metrics from various Azure resources, providing real-time insights into system performance and operational health.
- Deployed Azure ExpressRoute, establishing secure and dedicated network connections between on-premises data centers and Azure resources for enhanced performance and reliability.
- Set up malware safeguarding rules, app control, and authorization rules on Cisco Firepower 4145 and 4125 to guarantee accurate security monitoring.
- Development of Arista 5000, 7010X, and 7020R Cloud Vision for central administration and the synchronization of VXLAN set up, utilization, and tracking procedures. (Secondary Datacenter)
- Managing network devices and installation across different companies with improved Ansible.
- Working with Juniper MX240, MX480, and MX960 routers enables us to create web pages that efficiently manage web traffic.

- Developed and implemented Ansible security integrating tools, collaborating with several teams to reduce errors and increase innovation.
- Deployed Cisco ISE profiling services, automatically identifying and classifying endpoints based on their behavior, type, and role within the network.
- Using LTM and GTM for optimal efficiency, I oversaw the setup, tracking, and set up of BIG-IP F5 load balancers.

Micromax, India
Network Engineer

March 2019 –Dec 2021

- Configured IPSEC-VPN tunnels with Cisco ASA 5500, 5585, 5520 and 5545 series Firewall between some branch offices & headquarters.
- Used Wireshark for protocol analysis, dissecting packets to understand communication patterns and diagnose network anomalies across protocols such as TCP, UDP, HTTP, and DNS.
- Deployed, configured, and managed the Solar Winds Orion platform for comprehensive network and infrastructure monitoring, delivering visibility into the IT environment.
- Configured networks using routing protocols such as RIP, OSPF, BGP, TCP, UDP and manipulated routing updates using route-map, distribute list and administrative distance for on-demand Infrastructure.
- Implemented the Cisco TrustSec framework to enforce scalable and dynamic access control policies across the network infrastructure.
- Improve online frequency and enhance resiliency, spanning tree tasks were maintained and configured on Juniper switches EX-2300, EX-3400, and EX-2300-C.
- Configured intelligent traffic steering policies within Silver Peak to optimize network traffic routing, ensuring efficient resource utilization.
- Implemented diverse routing protocols including RIP, EIGRP, and OSPF on Juniper MX routers, addressing challenges such as discontinuous networks.
- Conducted regular security audits and assessments on Cisco routers like 1900, 2900, 3900 series to identify and remediate vulnerabilities and security weaknesses.

EDUCATION:

- Clark University **Dec 2023**
Masters in Information Technology
- Bharath Institute of Higher Education and Research, India **Jun 2019**
Bachelors in Computer Science

CERTIFICATIONS:

- Cisco certified network associate (CCNA)
- Cisco certified network associate (CCNP)
- Aws certified solutions architect
- Microsoft azure certified administrator associate
