

MOHAMMED ANZAL SHAIKH

DevOps, Cloud Infrastructure & SWE Enthusiast | Ex-Accenture

anzalshaikh27@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Northeastern University, Boston

Master's in Computer Software Engineering

September 2023 - August 2025

3.76/4.00

Relevant Coursework: Application Engineering Development, Cloud Computing/DevOps, Data Science Engineering.

The University of Mumbai, India

Bachelor of Technology in Computer Engineering

June 2018 - June 2021

3.70/4.00

Relevant Coursework: Data Structures, Analysis of Algorithms, Database Design, Cloud Networking Structures.

TECHNICAL SKILLS

Programming: Python, Java, Shell Script, Bash, R, SQL, PL/SQL, C, React, Go, .Net, Angular, NodeJS, Ruby

Tools & Services: Terraform, Docker, Kubernetes, Gitlab, GitHub, Helm, Ansible, Jenkins, Puppet, Packer

Cloud Services & Monitoring : AWS, GCP, Grafana, Prometheus, Loki, Datadog, CloudWatch

Certifications & Others: AWS Cloud Practitioner, Python, Java, RabbitMQ, Dynatrace

Databases: Oracle, SQL Server, MySQL, MongoDB, NoSQL, PostgreSQL

Networking & Data: TCP/IP, DNS, VPC, Route53, Load Balancer, SSL, Power BI, Advanced Excel, Tableau

WORK EXPERIENCE

DevOps/Cloud Infrastructure Engineer Co-op at Sun Life Financial, MA

July 2024 – Dec 2024

- Assisted in designing and implementing scalable **cloud infrastructure solution** on **AWS**, ensuring high availability and performance using **Go language** for automation and **helm charts** for K8's deployment.
- Collaborated with cross-functional teams to automate infrastructure provisioning and deployment processes using **Terraform** and **Kubernetes** for container orchestration.
- Developed a custom Backstage plugin using **React** to display security findings details from APIs.
- Gained hands-on experience with cloud services such as **EC2, S3, RDS**, and **Lambda**.
- Implemented monitoring and logging solutions using **Grafana, Prometheus, Loki, Datadog**, and **CloudWatch**, enhancing system observability and proactive issue resolution.

DevOps Engineer | Software Engineer at Accenture, Mumbai

June 2021 – July 2023

- Designed and maintained CI/CD pipelines using **Jenkins, GitLab CI/CD** and **GitHub Actions** to automate the build, test and deployment processes resulted in a **30% reduction in deployment time**.
- Orchestrated containerized applications on **AWS** using **Docker** and **Kubernetes**, optimizing **resource utilization by 40%** while ensuring scalability and high availability.
- Trained in Windows, Linux and Mac OS infrastructure maintenance ensuring servers are up to date.
- Automated system configurations and management with **Ansible**, achieving consistent environments and **reducing manual setup errors by over 50%**.

Research Assistant | Software Engineer at MyAtlas (Northeastern University)

May 2024 – Present

- Developing and implementing **Python scripts** for feature extraction and trend analysis from raw pilot data, ensuring well-documented and reproducible code for ongoing analysis.
- Generating weekly reports detailing feature calculations, trend analyses, and **Power BI visualizations**, providing meaningful insights.

ACADEMIC PROJECTS

Cloud-Native Web Application Infrastructure (AWS & GCP)

Jan 2025 – April 2025

- Designed and implemented a Node.js cloud-native web application with health check API deploying across both **AWS** and **GCP** environments with comprehensive CI/CD pipelines via **GitHub Actions**.
- Developed Infrastructure as Code using **Terraform** to provision networking resources including VPCs, subnets, and security groups while ensuring infrastructure validation.
- Created custom machine images with **Packer** across multiple cloud platforms, implementing parallel builds with proper security configurations and automated system services for application deployment.

Technologies used – AWS, GCP, Terraform, Packer, GitHub Actions, ORM frameworks, Shell scripting.

DevOps Infrastructure Orchestration Platform

Jan 2024 – April 2024

- Built a Node serverless application with distributed load balancing across multiple **AWS & GCP** regions.
- Created infrastructure automation with **Terraform** for **VPC** networking, **Route53** DNS, **S3** storage, and **RDS** PostgreSQL deployment.
- Implemented auto-scaling architecture using **custom AMIs** with Packer and **CloudWatch** metrics while developing a **RESTful API** for document management with **S3** integration for secure storage.

Technologies used – AWS (EC2, RDS, Route53, S3, CloudWatch), PSQL, Node.js, Packer, Terraform.

Personalized Event Recommendation System ([Paper Published at IJRASET](#))

Aug 2020 – April 2021

- Developed a web-based system for recommending events extracted from web browsing history.
- Structured and maintained MySQL database by cleansing inconsistent data using **TF-IDF algorithm**.
- Implemented the frontend using **Django framework and SASS** for styling, ensuring a responsive and user-friendly webpage for event discovery based on sophisticated cosine similarity algorithms.

Technologies used - R, Django, Natural Language Processing, HTML, CSS, SASS, TF-IDF algorithm.
