

Name: M Rajini
Sr Data Analyst
Email: mrajinikk@gmail.com
Phone: +1(813)-203-7620

Professional Summary:

- Process-oriented Data Analyst with 10+ years of experience in IT and comprehensive industry knowledge on Data Analysis, Business Analysis, Data Manipulation, Machine Learning, Statistical Modelling, Predictive Analysis, ETL, Database Management, Data Visualization and Business Intelligence.
- Extensive experience with different phases of project life cycle (analysis, design, implementation, testing, and debugging new and existing client - server-based applications).
- Good experience in Data Analysis, Machine Learning, Data mining with large data sets of Structured and Unstructured data, Data Acquisition, Data Validation, Predictive modelling, Data Visualization, Web Scraping.
- Experienced in statistical analysis (descriptive, diagnostic, predictive and prescriptive analytics) and various Machine Learning algorithms using Excel, R and Python.
- Hands-on experience in applications design, development and Maintenance of Integration Services (SSIS), SQL Server Reporting Services (SSRS), SQL Server Analytical Services (SSAS) and Data Transformation Services (DTS).
- Experience working with Transact-SQL (DDL, DML, and DCL), Designing and Normalization techniques on the database tables.
- Strong experience on several Python packages like NumPy, Pandas, Beautiful soup, Pytables, SciPy, Matplotlib, and Python -twitter, Pickle, urllib2.
- Experienced in building dimensional data models using SQL and developed ETL procedure.
- Expertise in building various Machine Learning models using K-Means clustering and decision tree models
- Expertise in performing Feature Selection, Linear Regression, Logistic Regression, k-Means Clustering, Classification, Decision Tree, Supporting Vector Machines (SVM) and Random Forest to train and test the huge data sets.
- Extensive experience working on various AWS services such as IAM, S3, Lambda, API Gateway, DynamoDB, SNS and used AWS SageMaker to build Machine Learning model.
- Extensive experience in implementation of Data Cleanup Procedures, Transformation, Scripts, Stored Procedures and execution of Test plans for loading the data successfully into Targets.
- Skilled in performing data parsing, data manipulation, data architecture, data ingestion and data preparation with methods including describe data contents, compute descriptive statistics of data.
- Experience in designing ETL Specification documents to load data from source to target using various transformations according to the business logic.
- Good experience building star schema and snowflake schema depending on the business data requirements.
- Expertise in configuring and managing data sources, data source views, dimensions, mining structures, roles and creating hierarchies using SSAS.
- Strong knowledge in database management (Teradata and Oracle) and complex SQL querying.
- Expert in all areas of SQL Server development including tables, user functions, views, indexes, stored procedures, functions, triggers, clustering, T-SQL, relational database models, data dictionaries, and data integrity.
- Solid knowledge of Power BI and Tableau Desktop report performance optimization.
- Experience in creating metrics, attributes, charts, filters, hierarchies, trend lines, sets and grouping, data blending, parameters and complex calculation to manipulate data using Tableau.
- Experience in Tableau report developing, testing and deploying report using Tableau Server.
- Expert in maintaining and managing Microsoft Power BI and Tableau reports, dashboards and publishing to the end users for executive level business decisions.
- Experience in creating Report Models for building Ad hoc reports using SSRS and Power BI.
- Experience in creating different reports in Power BI Desktop and published to Power BI online.
- Expertise in creating reports from importing, Direct Query and Live data from several data sources using Power BI.
- Solid ability to write and optimize diverse SQL queries, working knowledge of RDBMS like SQL Server
- Experienced in developing different types of Tabular Reports, Matrix Reports (Cross Tab or Pivot), Chart and Graphs reports using the SSRS reporting as per the user's requirements and deployed in the report server.
- Experience working on different Python IDE's: Anaconda, Jupyter and PyCharm.
- Extensive knowledge in performing User Acceptance Testing (UAT), writing test cases and documenting test results while working along with the QA team.

Technical Skills:

Languages	Python, R, SQL, Java, HTML, CSS, SAS, UNIX Scripting, Perl, XML
Python Libraries	NumPy, Pandas, Scikit learn, NLTK, Seaborn, Matplotlib, Plotly, Keras, SparkSQL, Spark RDD, Spark MLib, PySpark
Cloud	AWS - EC2, S3, IAM, RDS, Lambda, EMR, Glue, Sage Maker, EBS, Autoscaling, CloudWatch
IDEs	PyCharm, Spyder, Jupyter Notebook, Eclipse, IntelliJ
BI Reporting Tools	Tableau, Power BI, Excel
ETL Tools	SSIS, SSRS, SSAS
Other Tools	MS Excel, Macros, VBA, VLOOKUP, Talend, Teradata
Versioning Tools	SVN, Git, TFS
Databases	MySQL, NoSQL, PostgreSQL, Microsoft SQL Server, MongoDB
Operating Systems	UNIX, Linux, Windows, MacOS
Other Skills	Data Visualization, Machine Learning, Deep Learning, Data Mining, Business Analytics, Data wrangling, Hypothesis Testing, Ad hoc Analysis

Professional Experience:**JUBLIEE INFORMATION TECHNOLOGY****Mar 2019 – Jan 2025****Client: Envision Healthcare****Sr. Data Analyst****Responsibilities:**

- Performed data analysis of structured and unstructured data and designed statistical reports.
- Integrated data from multiple data sets into one database system.
- Created and run jobs on AWS cloud to extract transform and load data into AWS Redshift using AWS Glue, S3 for data storage and AWS Lambda to trigger the jobs
- Used AWS data pipeline for Data Extraction, Transformation and Loading from homogeneous or heterogeneous data sources and built various graphs for business decision-making using Python Matplot library.
- Used clustering technique K-Means to identify outliers and to classify unlabelled data.
- Worked on large SQL Datasets, to create new Power BI Reports and Dashboard
- Created DAX functions using Filter, Mathematical, Logical, Statistical and Date Time functions to use in Power BI reports.
- Performed ad-hoc reporting, creating multiple new reports in Power BI for the team based on understanding the requirement of the users.
- Generated graphs and reports using ggplot package in RStudio for analytical models.
- Developed and implemented R and Shiny application which showcases machine learning for business forecasting.
- Implemented using Machine Learning techniques with Python Pandas and Scikit-learn packages.
- Contributed in building Machine Learning models with scikit-learn library in Python, like Logistic Regression model, SVMs model, Random Forest model, and Naive Bayes model.
- Built on-demand Unit Price comparison data request and scheduled the report, for business analysis, management decision using Power BI.
- Analyzed sales data using Transact SQL (T-SQL) Queries, Joins, Views, Stored Procedures and Common Table Expressions for the data available in SQL Server database.
- Identified the dimension, fact tables and designed the Data Warehouse using Star schema.
- Configured the SSIS Packages using Environment Variables for Dynamic Selection of Development and Production Environment.
- Created and configured Dimensions, Attributes and Hierarchies using SQL Server Analysis Services (SSAS).
- Created Business Power BI Reports using the Tabular SSAS models.
- Designed and implemented Dashboards and Scorecards with business KPIs.
- Created Calculated Columns and Measures in Power BI and Excel depending on the requirement using DAX queries.
- Participated in modelling activities which included building star schema as per the business requirements.
- Assisted in building SSIS packages to extract, to transform and load the data to database(s) at scheduled intervals and create Jobs in SQL Server Agent that would run on a regular basis to Load data into the Database.
- Created simple SSIS package that sends an email after ETL process is complete to indicate certain calculations from the extracted information.

Environment: Python, Pandas, Scikitlearn, R, RStudio, R-Shiny, ggplot, AWS Lambda, Redshift, Glue, S3, Machine Learning, Git, SQL, Tableau, Power BI, Star Schema, SSAS, T-SQL, SSIS, ETL, SQL Server Agent, DAX, Excel, SDLC, Agile, Windows

PULSEBYTE SOFTWARE CONSULTING PRIVATE LIMITED**SEP 2017 – MAR 2019****Client: Advantum Health****Data Analyst****Responsibilities:**

- Performed data analysis and data profiling using complex SQL and involved in Data mapping specifications to create and execute detailed system test plans.
- Implemented machine learning model with Python Scikit-learn.
- Superintended usage of Python NumPy, SciPy, Pandas, PandaSQL, Matplot, Stats packages to perform dataset manipulation, data mapping, data cleansing and feature engineering. Built and analysed datasets using R and Python.
- Configured the SSIS Packages using Environment Variables for Dynamic Selection of Development and Production Environment.
- Analysed existing internal data and external data, worked on entry errors, classification errors and defined criteria for missing values. Performed data analysis and data profiling using complex SQL.
- Performed network traffic data analysis, prevented any anomalies in enterprise's network and provided recommendation
- Collaborated with clients to gather business process requirements, ensuring Standard Operating Procedures (SOPs) and Service Level Agreement (SLA) Compliance in the project development phase based on client's requirements
- Built forecasting and statistical models and integrated data from multiple sources to optimize efficiency and quality
- Enhanced productivity by 35% through problem-solving and debugging issues using Excel, Python, SQL queries, Tableau and Looker
- Developed complex stored procedures, triggers, cursors, tables, indexes, constraints, views and other SQL joins for dashboard applications.
- Participated in all the phases of project life cycle including data acquisition, data cleaning, features scaling, feature engineering and statistical modelling.
- Adept at relational database structures, dimensional models, ETL, and data de-normalization
- Created views in Tableau Desktop that were published to the internal team for review and further data
- Performed analysis and customization using filters and actions
- Analyzed large data using Excel (lookup, pivot tables, charts)
- Analyzed the data using statistical features in Tableau to develop Trend Analysis reports.
- Experienced in all project phases during Agile/SCRUM Methodologies
- Performed A/B testing to improve the quality of traffic generated and understand the factors affecting the success rate & improved the site conversion rate by 5%.
- Performed analysis and presented results using SQL, Excel, and Visual Basic scripts.
- Involved in testing the SQL Scripts for report development, Tableau reports, Dashboards, Scorecards and handled the performance issues effectively. Prepared test data sets and performed data testing using the PL/SQL scripts.
- Also used MS excel for data mining, data cleansing, data mapping, and data dictionary and data analysis.
- Troubleshoot production issues and system malfunctions and restore normal functioning.

Environment: Python, R, Scikit-Learn, NumPy, SciPy, Pandas, PandaSQL, Matplot, Tableau, Excel, Power BI, MS SQL, SQL Server, Machine Learning, SSIS, SSRS, ETL, MS Excel, SSIS, T-SQL, Windows, Agile/Scrum

SAT SOFTWARE INFRASTRUCTURE & PRIVATE LIMITED**Feb 2013 – Aug 2016****Data Analyst****Responsibilities:**

- Performed cluster analysis on customer spend data to increase the accuracy of specific promotions based on their purchasing pattern resulting in an increase of sales by 65%.
- Analysed customer data (credit history and income statements) and created a new credit risk rating model which brought down the default rate by 50%.
- Involved in building the ETL architecture and Source to Target mapping to load data into Data warehouse from multiple sources.
- Interacted with other data scientists and architected custom solutions for data visualization using tools like tableau, Packages in R and R-Shiny.
- Performed statistical analysis of experimental design and analysis (DOE) using Python and data visualization using in-built Python functionalities such as Matplotlib.

- Used scientific Python functionalities such as NumPy, Pandas, Seaborn, Plotly, Machine Learning, and Tensor flow for data structures, matrices and mathematical problems for and statistical modelling.
- Collected, analyzed, and interpreted raw data from various websites and utilized web scraping techniques to extract and organize general and competitor data.
- Transformed raw data into SQL Developer database tables and created custom-made ETL jobs through Talend to prepare unruly data for machine learning and decision making.
- Developed models in data and making predictive analysis through Regression analysis.
- Used Power BI to collect and process data from internal and external systems to create reports and set access levels for individual users and specific dashboards for stakeholders based on information sensitivity.
- Created and designed databases by identifying entities, attributes, relations, and data insertion using Microsoft SQL Server with SQL Server Management Studio to implement database system.
- Provided software solutions for data preparation, data quality, data integration, application integration and data management through Extract, Transform and Load using Talend.
- Participated in solutions design against business requirements and QA Verification phase to support the QA team.
- Built data pipelines with ETL tools such as Talend and built business reports through dashboards with Tableau.
- Designed visually impactful dashboards in Tableau and used Excel for data reporting using pivot tables and VLOOKUP.
- Modified existing mappings for enhancements of new business requirements.
- Worked on Teradata SQL, PL/SQL, and hands on experience with SQL Server and Oracle databases.
- Developed high level actionable Power BI and Tableau reports and dashboards.
- Tested complex ETL Mappings based on business user requirements and business rules to load data from source flat files and RDBMS tables to target tables.
- Transformed complex business logic into Database design and maintaining it by using SQL objects like Stored Procedures, User Defined Functions, Views, T-SQL Scripting and Jobs.

Environment: Python, R, R-Shiny, Matplotlib, NumPy, Pandas, Seaborn, Plotly, Machine Learning, TensorFlow, SQL, Talend, Power BI, Tableau, MS SQL Server, Excel, VLOOKUP, Windows
