Summary

I fulfill my destiny just based on a life philosophy: "**Be a lifelong learner.**" & "**Follow your passions.**" & "**Stay Hungry, Stay Foolish**".

- * Big fan of Steve Jobs.
- * Versatile Full-stack engineer with comprehensive experience in product development from scratch, code enhancement/refactoring, creating SaaS, managing legacy codebase, tech migration & decommissioning projects in complex, demanding, and large-scale enterprises with a High Volume of Data influx.
- * Good experience in troubleshooting complex client-side issues and creating efficient, maintainable code that can scale with the company's needs.
- * Passionate about staying up-to-date with the latest trends in the field and have a knack for quickly learning new technologies.
- * Proactive team player who can collaborate with cross-functional teams of all sizes.
- * Aimed and distinguished developer who doesn't believe in random rolls of the dice.
- * Expertise in **Javascript, Typescript, Python, PHP, Golang**, ASP.NET, and Elixir for front-end and backend development.

Experience

Senior Software Engineer

HP

Oct 2023 - Present

- Made significant progress of building HP internal projects to implicitly help sales team handle the real-time information and to redesign **Order Management System(OMS)** with 4M+ users improving performance by 40%.
- Led backend engineering team to implement clear and performance-oriented architecture along with scalability and reliability by adding **250+ API** and third-party API integration.
- Advocated for best practices in front-end development and pushed front-end team to follow
- Collaborated with Engineering and Scrum teams to clearly discuss and confirm the requirements through weekly check-in and daily standups under **Agile/Scrum environment**.
- Implemented attractive UIs of OMS and Internal Web Pages which can be used by our HP family to improve ease-of-work and work-life balance by using **React 18+** and **React-Native**.
- Updated HP Desktop Applications using **React Native**.
- Developed a real-time data synchronization feature using WebSockets and ASP.NET Core **SignalR**, ensuring seamless communication and instant updates for users across multiple devices.
- Implemented **microservices** architecture using **ASP.NET Core** and **Kafka**, breaking down complex applications into smaller, manageable services, resulting in improved scalability and fault tolerance.

Senior Software Engineer

Healthfirst

Apr 2020 - Sep 2023 (3 years 6 months)

- Participated in building web & mobile based platforms and applications used in the Clinical & Medical Insurance app as well as telehealth consultation replicating the in-person consultation experience as closely as possible.
- Worked closely with cross functional team members including data scientists and Clinical engineers to create software tools for data analysis and automation technologies.
- Implemented pixel-perfect UIs by using **React 18+** and **React-Native**.
- Integrated the **native modules** with Bluetooth capabilities using **React Native**.
- Utilized React and advanced frontend optimizing approaches like HOCs, custom hook and mono repositories and followed memorizing best practices to enhance performance and reusability.
- Created **Typescript** reusable components and services to consume REST APIs using component based architecture provided by **Next.JS** and React-Native(**TamaGui + Expo**).
- Utilized **Node.JS**, **Golang** and **Django REST** framework for building **micro-service** backend infrastructure, integrating **API gateway & Load Balancing**, establishing the communication between the micro services by using **Kafka**.
- Implemented Real-time applications by using **Golang** and wrote consistent codebase with go-routine and channel.
- Experience in building web applications with AI/ML integration using Python libraries such as **Tensorflow**, **Keras**, and **PyTorch**.
- Used **Media Optimization server** & tools alongside of **CDNs** to reduce the response time and provide high-quality of videos and voices.
- Utilized **Flask** to build light-weight application and Python SQL libraries to connect and perform CRUD operation on **MongoDB** and **MySQL**.
- Built **GraphQL** with Apollo Client/Server and React Query, used MongoDB with **Redis** Cache to work with large amount of data efficiently.
- Implemented **Redux Saga** with actions and reducers to implement async API calls and used **Zustand** for better performance and managing global state efficiently.
- Used **Firebase** Analysis tool to track the history of issues and for easy bug checking.
- Used **Jest**, Mocha, Chai, Enzyme, Jasmine, and **react-test-render** to unit and integration testing.
- Used **storybook** to manage UI components and utility functions like API calls.
- Implemented **CI/CD** pipelines by using **Terraform**.
- Followed Agile/Scrum methodology with **JIRA** board. **Git** is used as a version control tool and Jenkins is used for the continuous integration of builds.
- Utilized several Amazon Web Services including **AWS S3** to store large collection, **EC2 & Lambdas** to setup micro-service architectures, **Amplify**, **Cognito**, **SNS**, and **DynamoDB**.

Staff Software Engineer

Fluz

Apr 2018 - Mar 2020 (2 years)

- Implemented fantastic financial cash-back mobile application to maximize the value and save money for consumers and built CMS & CRM web apps to leverage managing customer & transaction data.
- Worked on security part by using cryptographic algorithms to make sensitive information secure and build trustworthy cyber security.
- Built React native Fintech mobile application on iOS using **Expo**.
- Implemented the **push notification** and **deep linking**.
- Implemented **React Native** by leveraging its “out-of-the-box” compiler to architect a responsive, scalable, and cross-platform mobile application.
- Implemented several funding sources like bank account, debit & master card as well as crypto tokens by using several third-party APIs like **Plaid** API, **Stripe**, **Paypal** APIs, and etc.
- Integrated AI powered system like Oscilar and Idology to identify the users through their government issued photos.

- Built CMS & Admin portals by using **React**, **React Hooks**, **Styled-components**, and **Redux** and increase the test coverage by using **Jest**, and **Enzyme**.
- Integrated data visualization by using modern **chart libraries** like **ForceGraph3D** to show intuitive and clean relationship and transaction frequency between the consumers.
- Protected sensitive API responses with mask mechanisms by using **Very Good Security Service**.
- Build RESTful APIs by using **Nest.js**, **Laravel** and **Python Django Rest** framework and facilitate fetching complex data by using **GraphQL/Apollo Client**.
- Absorbed experience in building real time chat using **Python Web Sockets**.
- Got near real-time stock prices by using **React Query**, **Apollo Server subscription**, and **GraphQL**.
- Built scalable and modular GraphQL APIs by combining multiple existing APIs using **GraphQL Stitching** and **Federation** approaches.
- Writing unit and integration tests using **Jest**, Mocha/Chai, Enzyme, and React-test-renderer.
- Created **Typescript** reusable client and server by using Component- based architecture and **Next.JS**.
- Used **Redux-toolkit** in application to retrieve data from Back-End and to also perform RESTful services and GraphQL.
- Provided better performance and enhanced user experience by using several ways and resolved API traffic issues & bottlenecks problems by using **micro-service architectures** & **Load balancing**.
- Utilized **GCP** mainly for cloud system and used **PostgreSQL**.
- Used **Github actions** for CI/CD pipelines.
- Built cross-platform development by using **React Native** & Native bridging by using **Swift & Kotlin**.
- In conclusion, grew consumers to more than 40k with new fresh ideas and optimized performance with awesome designs.
- Wrote automated tests on the unit level and the environments with 95% coverage.
- Implementing **Redis** as a cache database.
- Interviewed candidates for senior positions in engineering.
- Updated legacy documents and codebase and wrote down how to set up the environment in Jira confluence and Engineering Wiki pages.
- **Mentored** the others to produce top-notch codebase and reviewed their codebase.

🍏 Senior Software Engineer

Apple

Jan 2016 - Mar 2018 (2 years 3 months)

- Worked on internal web applications for customer success & operation teams and helped other startup companies make their ideas real.
- Implemented **micro-service** architectures to facilitate API traffic and upgraded RESTful APIs of some backend services by using **Node.JS**, **Phoenix** framework(Elixir) and Python **Django REST** framework.
- Worked on Front-End part by using **React 16+** / **AntD** / **Swift** / **Tailwind CSS**.
- Worked on iOS application development by using Swift and React Native.
- Worked on **Golang** OpenTelemetry Collectors to develop custom data collectors for metrics, logs, and traces.
- UI development with technologies like **HTML5**, **CSS3**, **SASS**, **Bootstrap**, **React.js**, **jQuery**, **Typescript** and **JavaScript ES6**.
- Optimized front-end loading time 22% faster by using React lazy-loading, **React context APIs** and provide better performance by reducing unnecessary re-renders.
- Implemented React.js code to handle cross-browser compatibility issues using the **react-apppolyfill** node module and **LightHouse**.
- Utilized several AWS including **S3**, **SQS**, **Lambda**, **DynamoDB** and etc.
- Followed a **scrum-based** development process and worked towards sharing the experience to make the process smooth and genuinely agile.
- Documented everything using confluence.

- Contributed to developing **Terraform** dashboards.
- Developed automatic documentation generator tools in **Golang** to validate, rate, and update our documentation for customers to integrate with third-party services.
- Developed integration tests using **Golang** test containers to check documentation examples.
- Collaborated with Apollo company to build Conference apps so that consumers can easily create conference meetings or one-to-one meetings through their phones or web accounts and this app was built by **Rails** and **Next.JS** alongside **Twilio API**, and **Plaid** for the subscription.

Software Developer

Weil&Jones

Sep 2012 - Dec 2015 (3 years 4 months)

- Participated in building several web applications like Trend Analysis Center App and Learning Assessment App and absorbed new technologies showing potential as a fast learner.
- Built out accessibility UI improving its usability to ensure any person can use it comfortably and without major complications.
- Implemented stable React components and stand-alone functions to be added to any future pages.
- Built custom reporting engine with graphical Excel output using Excel JavaScript API.
- Enhanced application performance by using optimized algorithms and proper data structures.
- Got practical experience with Networking, Security, Protocols, Web server and Cloud Computing by utilizing **PHP frameworks**.

Education

Columbia University

Bachelor's degree, Computer Science

Apr 2008 - Aug 2012

- Participated in Programming contest between universities and won the bronze medal.
- Had a membership of a basketball club and “save the earth” activity to reduce the pollution leading to climate changes.

Skills

- React.js • React Native • Node.js • Golang • Django REST Framework • TypeScript
- PHP Frameworks • Python • Project Design • Object-Oriented Programming (OOP)
- Mentoring • Collaborating • Architecture Design
