Summary

I have been working on IT projects, system administration, and technical support issues for over fifteen years. I have over ten years of experience working in a multi-tenant data center environment for a Managed Services Provider and Infrastructure as a Service provider. I have extensive knowledge in administering Windows Servers, Windows Desktops, Microsoft Azure, Microsoft 365, and all facets of I.T. System Administration. Recently I have been involved in projects to implement multi-factor authentication in various ways such as utilizing Duo Push with Azure AD Conditional Access Policies and implementing MFA for VPN connections using a Meraki firewall, RADIUS/NPS server and Azure AD Conditional Access policies. I have also lead projects in auditing and hardening Microsoft 365/Office 365 security.

Experience

Project Engineer | System Administrator

Dataprise

May 2022 – Dec 2024 (2 Years 8 Months)

Projects included but were not limited to Microsoft Azure Active Directory & Microsoft Office 365 Migrations, Azure MultiFactorAuthentication rollout utilizing Azure Conditional Access Policies with RADIUS server & Network PolicyExtension for Azure, Duo MultiFactor Authentication utilizing Azure Active Directory sync, Azure & Office 365 Security Hardening auditing, configured VPN service to utilize RADIUS server & NPS for Azure for MultiFactor Authentication on VPN connections. Extensive experience with VMWare virtualization and administering VMWare ESXi host environments.

Project Engineer | System Administrator

DKBInnovative

Oct 2021 - Mar 2022 (6 months)

Projects included Microsoft Azure Active Directory & Microsoft Office 365 Migrations, Azure MultiFactor Authentication rollout utilizing Azure Conditional Access Policies with RADIUS server & Network Policy Extension for Azure, Duo MultiFactor Authentication utilizing Azure Active Directory sync, Azure & Office 365 Security Hardening auditing, configured VPN service to utilize RADIUS server & NPS for Azure for MultiFactor Authentication on VPN connections.

Project Engineer | System Administrator

Hortensine Ranch Company, LLC

Mar 2021 – Aug 2021 (6 Months)

I have been working part-time on various I.T. Projects for this client for over 15 years. Recently I migrated Microsoft Exchange server from physical server to Microsoft Office 365 for email as well as setup and configured multi-factor authentication for all email accounts. Upgraded their on-premises primary and backup domain controllers from Microsoft Server 2008 R2 to Microsoft Server 2016. Migrated their on-premises Microsoft Server 2008 R2 file server into a Microsoft OneDrive for Business file sharing infrastructure

System Administrator | System Engineer

Epic.io

Oct 2019 - Feb 2021 (1 year 5 months)

Troubleshooting of Windows Server, SQL Server, Cisco/Sonicwall Firewalls, and various Linux/Unix based appliance. Manage Active Directory, Group Memberships, Group Policies, DNS, Sites & Services, DFS, and Microsoft replication technologies. Review and advise on future upgrades, optimizations, and new technologies to better service customers and increase efficiencies. Worked with Senior engineers and architects to test and validate disaster recovery scenario

System Administrator

Encapture

Oct 2018 - Jul 2019 (10 months)

This job position centered around configuring and supporting IBM's FileNet Content Management system and the in-house developed software suite Encapture. Encapture and FileNet is an end-to-end platform for document processing. Work included deploying new/rebuilding existing virtual servers and configuring services, settings, directories, and storage. Perform daily system monitoring, verifying the integrity and availability of all hardware, server resources, systems and key processes, reviewing system and application logs, and verifying completion of scheduled jobs such as backups.

System Administrator | Technical Support Engineer

VAZATA

Oct 2013 - Sep 2018 (5 years)

Managed, maintained & launched multiple O365 dedicated clients. Implemented SSL & IPsec VPNs, port forwarding, routing and other firewall tasks. Worked on-site as System Administrator at Toyota Stadium (FC Dallas) in Frisco, TX. Performed all system administrator duties for LAN/WAN and all end users in FC Dallas front office. Worked on-site as System Administrator for K-12 private school. Performed all system administrator duties for LAN/WAN and all end users at the school

Education

The University of Alabama

Bachelor of Arts in Communication - Tuscaloosa, AL

Asher College

Computer Specialist & Network Technician - Dallas, TX

Billy Kendall's Projects and Skills Used over the past five years

- 1) Domain migrations and mergers
 - a. Migrated one hybrid domain into an existing hybrid domain. Included both users and computers. Large corporate healthcare provider. Project was so large that it was split up into six separate projects based on clinic sizes. Usually around 50 users and computers per migration project.
 - b. Migrated hybrid on-prem AD Connect synced domains into 100% Azure/Entra AD cloud-based domains. Decommissioned on-prem AD Domain Controllers. Performed at least three of these migration scenarios.
 - c. Migrate end user's Windows profiles from on-prem AD to Azure AD profiles to complete domain migrations.
 - d. Tools used included but were not limited to Quest Migration Manager, ForensIT User Profile Wizard (both free and registered versions), PowerShell scripts, etc.
- 2) Email migrations
 - a. On-prem Exchange to hybrid Exchange Online migrations.
 - b. Hybrid Exchange Online email environments to 100% O365 cloud-based email environments.
 - c. Tools used included but were not limited to BitTitan MigrationWiz, PowerShell scripts, etc.
- 3) SharePoint/OneDrive migrations
 - a. Migrated on-prem (physical and/or VM) file servers to 100% SharePoint and OneDrive cloud-based environments. This included known folders synchronization using OneDrive for Business and mapping SharePoint sites using OneDrive for Business.
 - b. Tools used were primarily Microsoft tools such as Migration Manager.
- 4) Defender
 - a. Hardening MS Secure Score from ~40 to a ~80+ score
 - b. Deploying and configuring MS Defender security baseline configurations
 - c. Fine tuning Threat Analytics, AntiSpam, Malware Prevention policies, etc.
- 5) Intune and Autopilot
 - a. Configuring Autopilot for Out of Box Experience (OOBE) deployment.
 - b. Configuring Intune for App deployment and initial OOBE deployments.
 - c. Intune group policy configuration and deployment.
- 6) VMWare Virtualization
 - a. Experience with administering VMWare ESXi hosts
 - b. Experience with administering VMWare servers and virtual desktops (VDIs)
- 7) Multi-Factor Authentication projects
 - a. Conditional Access MFA
 - b. DUO MFA
 - c. MFA for VPN connections
- 8) Single Sign-On projects
 - a. Azure Enterprise Application
 - b. Manual SAML based (third party vendor setup)
 - c. External platform for SSO (i.e. DUO)
- 9) Documentation
 - a. Provided end user documentation and post-project support for end users.
 - b. Documented all changes and additions in company Knowledge Base (typically IT Glue)
- 10) Discovery projects
 - a. Performed full discovery projects on large scale corporate networks to assist vCIO's and Solution Architects to present detailed presentations to prospective clients.
