Application Migration

Middleton, WI

Summary

Senior full-stack developer with experience in healthcare and global supply chain software. Specialties include application migrations, regulatory development, financial handling, and securing sensitive patient data.

Skills

10+ Years: VB6, Visual Studio, MUMPS/Intersystems Caché, CI/CD, SDLC

7+ Years: C#, ASP.NET, .NET Core, Javascript, Typescript, SVN

5+ Years: MVC, React, HTML, SASS/CSS, AJAX, Agile/Scrum

2+ Years: SQL, LINQ, Docker, AWS, Entity Framework, Redux, Git, JSON, RESTful APIs, AutoMapper, OData, AG-Grid, Formik, TDD, C/C++, Java, Linux Powershell, Hangfire, Python

Experience

.NET Developer Consultant

TDK Technologies (assisting Sunset Transportation)

05/2023 – 04/2025

Chesterfield, MO

- Modernized legacy invoice application, replacing a VB6 client using raw SQL with a React Single Page Application (using Material UI) that used RESTful APIs linked to microservices utilizing Entity Framework to interact with the database
 - Migrated file storage from internal network drives to AWS S3 storage
- Replaced SQL stored procedures with Entity Framework LINQ calls, simplifying maintenance and delivering up to 30% performance gains
 - Revised invoice searches uncovered over \$4,000/year of missing revenue
- Secured client-side data model using AutoMapper to restrict exposed properties and reduce JSON object size up to 25%
- Deployed application updates to Docker containers on AWS via PowerShell
- Improved responsiveness of heaviest 15% of workflows through the use of Hangfire to move intensive processes to background jobs
- Documented APIs via Swagger/Swashbuckle to OpenAPI v3 standards
- Built internal frameworks for AG-Grid and Formik to simplify form creation and maintenance, including OData integration
- Created a design-demo framework for project team members, letting non-technical staff mock up forms in under 30 minutes

Senior Software Developer

Epic Systems Corporation

08/2005 – 10/2022

Verona, WI

- Developed and tested modules in Enterprise Medical Record software as a full stack developer using C#, ASP/.NET, .NET Core, JavaScript, TypeScript, React/JSX, and MUMPS/Caché
- Worked on Emergency Department, Inpatient, and Managed Care teams
 - Verified proper implementation of 4+ instances of shared controls
 - Troubleshoot and repaired 3 instances of improper shared control usage
 - Additional certifications for Anesthesia, Ambulatory, and Beaker modules
- Migrated modules from VB6 to C#/.NET and React/JSX using Web APIs
- Modernized application UIs to meet UX designer review, including section 508 accessibility requirements (verified via JAWS and NVDA)
- Wrote and updated unit tests in JavaScript, C#, and MUMPS
 - Used Jasmine, Eggplant, and internal Caché test framework
- Built, tested, and maintained RESTful APIs using HL7, X12, and FHIR interfaces
- Performed client and server performance and scalability benchmark testing to verify as-fast-or-faster performance for 95% of workflows
- Independently researched functional requirements and integrations for software projects and designed interactive solutions on a 3-month release schedule
 - Coordinated milestones and timelines for 4-8 developers working in parallel
- Analyzed and commented on governmental regulations
 - Led an effort to revise [Transparency in Pricing](#) regulations to reduce the size and number of required Machine-Readable files by a factor of 10,000+, saving customers hundreds of thousands of dollars in ongoing hardware costs
- Interacted with customer contacts to discuss regulatory development, plan configuration updates, and address issues found in software
 - Undertook 2+ onsite trips per year to support system installs and upgrades
- Performed ad-hoc anonymized analysis of 100+ customer systems to assess development needs and perform live system troubleshooting
- Triageed and documented software issues for a team of 50 developers, including sensitive issues regarding security vulnerabilities and data privacy
- Triageed and assigned testing responsibilities for a team of 15 developers
- Reviewed release notes for customer documentation, created and updated internal wikis and API documentation
- Presented development demos to customer groups and internal teams
- Collaborated with developers, quality assurance, technical support, technical writers, and implementation staff
- Mentored 6+ new hires and transfers
- Evaluated new developers' I18N readiness through training exercises

Education

Bachelor of Science in Computer Science

University of Wisconsin – Madison

08/2001 – 05/2005

Certifications

PCEP – Certified Entry-Level Python Programmer

04/2025

CompTIA Cloud+

03/2023

Epic HIPAA, Privacy, and Information Sharing

2012-2022

Epic Internationalization

2011
