

Seth Gram

Senior Full Stack Engineer - C#, Python, JavaScript

sethericgram@gmail.com | Fort Lauderdale, FL 33301

Senior Software Engineer with **10 years of experience** with a solid foundation in **C#, JavaScript** and **Python**. Proven expertise in both frontend and backend utilizing **.NET, ASP.NET, React, Vue.js, Angular, Express, Django** etc. **Strong team player** with a commitment to delivering high-quality software and continuous learning.

Skills

- **Languages:** C#, Python, JavaScript, TypeScript
- **Frameworks/Libraries:** .NET, ASP.NET, Entity Framework, NUnit, MSTest, Node.js, Express.js, NestJS, tRPC, Django, Flask, Pytest, Prisma, TypeORM, DrizzleORM, React, React hooks, Redux, RTK, React Testing Library, Cypress, Material UI, Tailwind CSS, Vue, Vuex, Pinia, Quasar, Angular, RxJS, GraphQL, Apollo, Redis, RabbitMQ, BullMQ, OpenAI, Websocket,
- **Databases:** MySQL, PostgreSQL, MongoDB, Neo4j
- **Tools/Platforms:** AWS, Azure, JIRA, Notion, Miro, Github, Bitbucket, ClickUp, Confluence, TravisCI, CircleCI, Jenkins, Docker, Slack, Microsoft Teams, Lucidchart, Swagger
- **Soft skills:** Communication, Flexibility, Teamwork, Problem solving, Agile, Scrum, Kanban

Experience

Accenture, Senior Full Stack Engineer | Jan 2019 - Present

- Participated in sessions to analyze designs built on **Lucidchart, Excalidraw** etc
- Integrated **third-party APIs** in **Python** to expand application functionality and streamline data access
- Utilized monitoring tools including **Datadog** and **Splunk** to track application performance, identify bottlenecks and ensure high availability and reliability
- Estimated error rates on **Apollo Studio** against **GraphQL** queries and mutations
- Provided **technical mentorship** by reviewing code and offering best practices for optimization and efficiency
- Built a data-analyzing platform based on **AI** using **React, TypeScript, Tailwind CSS, Redux, Python, Flask** and **AWS**
- Designed and implemented **API** endpoints using **ASP.NET Core, C#,** and **Entity Framework**
- Optimized frontend applications using diverse approaches such as **code splitting, lazy loading, caching** etc
- Used **react virtualization** libraries to improve the performance of an application
- Migrated a **Vue2** application to use **Vue3, TypeScript** and **Quasar** and fixed issues in **Django** backend
- Developed consumer-based features and applications using **C#.NET** and **Angular**
- Worked on building a mobile application of a healthcare platform using **React Native**
- Worked with diverse database systems including **MySQL, PostgreSQL** and **MongoDB**
- Participated in building a platform that detects patients' symptoms and generates notes using **AI (React, TypeScript, Websocket, tRPC, Redis, BullMQ, AWS, OpenAI)**
- Refactored legacy **.NET** Framework applications to **.NET 6**, improving **performance, maintainability**, and leveraging modern features such as **async/await** and **global using directives**
- Utilized **LINQ** and **Lambda** expressions to efficiently query databases and collections, improving **code readability** and **performance**

Zimmer Biomet, Frontend Engineer | Apr 2016 - Dec 2018

- Migrated **HTML/JavaScript/jQuery** based applications to use a modern tech stack including **Vue, TypeScript** etc
- Worked with a product manager and translated business requirements into technical descriptions with clear & open communication skills
- Implemented **Vuex** for state management and optimized data flow
- Contributed significantly to code excellence through active participation in weekly **code reviews, bug identification**, and **security enhancements** using **JIRA** and **Github**
- Created reusable, modular components and implemented elegant **UI** from **figma** designs using **Vue** and **Vuetify**
- Integrated **RESTful APIs** from **Node.js/Express.js** server documented using **Swagger** while collaborating with backend engineers

- Implemented **CI/CD** pipelines using **Travis CI**
- Managed **Webpack** configurations for effective bundling
- Utilized **AWS** services including **S3**, **EC2**, **CloudFront** etc for the deployment purpose
- Configured **ESLint** and **Prettier** to keep a **good code quality** and convention

Google, Software Engineer | Oct 2014 - Mar 2016

- Collaborated with staff engineers to develop features for internal tools and applications using **Python** and **Java**, contributing to the delivery of high-quality code under the guidance of experienced team members
- Worked with **Apache Spark** and **BigQuery** to conduct the performance tuning and optimization of the web analytics engine
- Developed internal applications using **Angular**, **NgRx** and **Angular Material**
- Worked with the monitoring team to track application performance using **Datadog** and **Google Cloud Monitoring**, helping to identify performance bottlenecks and improve system reliability

Education

Bachelor of Science • Computer Science | University of Miami • 2010-2014
