## Summary

---

I am an experienced Windows Server Engineer and Data Analyst with a strong specialization in Server Management, PowerShell Automation, Data visualization and Dashboard creation. Proficient in tools such as Excel, Jira, Power BI, and Python, I bring a versatile skill set that includes PowerShell scripting and hands-on experience with Windows Server and Azure Cloud environments. My ability to merge technical proficiency with analytical thinking enables me to deliver innovative solutions and improve operational efficiency.

Throughout my career, I have deployed dynamic dashboards and reports, significantly streamlining team's outcome. By leveraging advanced scripting and cloud technologies, I have streamlined workflows and contributed to the optimization of frameworks that produced customer facing deliverables.

## Experience

---

### Senior Software Engineer, DELL Technologies

Feb 2022 – July 2024

- Created interactive dashboards in Jira, enabling real-time data-driven decision-making for issue management of Windows Server OS.
- Utilized Excel(Pivot Tables, Advanced Formulas) and PowerBI to analyze Issue and contract consumption data. Delivered weekly and monthly reports, presenting insights and actionable recommendations to senior management.
- Configuring VM scale sets and alert based monitoring rule mechanisms on Azure to enhance the scalability and to mitigate the cost of the resources.

### Software Engineer, Dell Technologies

July 2014 – Jan 2022

- Conceptualized and implemented innovative test strategies, uncovering critical defects by 25% and substantially enhancing software reliability and user experience for multiple Windows Server releases on Dell servers
- Physical and virtual Windows server OS deployments, configuration and automation using PowerShell
- Test Execution and results were analyzed using Excel to identify pain points and enhance the future testing cycles

## Projects

---

- Visualization dashboards and summarized reports creation using JIRA and Excel for Defect Summary reports to multiple stakeholders
- Azure CLI based PowerShell automation for Windows Virtual Machines
- PowerShell automation for zero touch Windows Server OS deployments and multilingual OS image creation. Reduced resource consumption by 50 % and enhanced the deployment time by 25%.

## Certifications

---

- Microsoft Azure Fundamental Certification

## Technologies

---

**Languages/Tools:** MySQL, Python, PowerBI, PowerShell, JIRA, Confluence

**Technologies:** Microsoft Windows Server, Azure Resource Provisioning, Virtualization(Hyper-V)

## Education

---

**NIT Surathkal, M. Tech (Research), Information Security**

June 2012 – Feb 2015

- **Coursework:** Database Engineering, Algorithms, Number Theory and Cryptography

**Amrita Vishwa Vidyapeetham, Bengaluru, B. Tech, Computer Science**

June 2008 – May 2012

- **Coursework:** Data Structures, Data mining and Warehousing, SQL, Statistics, Algorithms
