

PROFESSIONAL SUMMARY:

Results-driven Sr. Java Full Stack Developer with over 10+ years of experience in designing and implementing scalable web applications. Proficient in leveraging Java technologies, including Spring, Spring Boot and Hibernate, to create robust back-end systems that optimize data management and business logic. Adept at developing intuitive front-end interfaces using modern frameworks like React and Angular, ensuring seamless user experiences across various devices. Experienced in deploying applications on cloud platforms such as AWS and Azure, utilizing best practices for continuous integration and delivery (CI/CD). A collaborative team player with a strong focus on agile methodologies, dedicated to delivering high-quality software solutions that align with business objectives. Effective Communicator: Skilled in conveying complex technical concepts to diverse audiences, fostering collaboration among cross-functional teams and ensuring clarity in project requirements and deliverables. Quick to identify challenges and implement innovative solutions, demonstrating resilience and flexibility in dynamic environments while maintaining a solid commitment to meeting deadlines.

TECHNICAL SKILLS:

Programming Languages: Java, JavaScript (ES6+), TypeScript, SQL, PL/SQL

Frameworks and Libraries: Spring (Core, Boot, MVC, Data JPA, Batch, Cloud), Hibernate, React, Redux, React Router, Angular, Material UI, jQuery, Bootstrap, Vue.js, Struts, JavaServer Pages (JSTL)

API Technologies: RESTful APIs, GraphQL APIs, Java Message Service (JMS), SOAP Web Services

Cloud Services: AWS (EC2, S3, RDS, SQS, SNS, Lambda, IAM, Autoscaling), Azure (App Service, Functions, Logic Apps, Azure Data Factory)

Databases: MongoDB, PostgreSQL, SQL Server, Oracle Database

Development Tools: Eclipse IDE, Apache Tomcat, WebLogic, WebSphere, JBoss

CI/CD and Version Control: Jenkins, Git, GitHub, GitLab, BitBucket, Maven, Yarn

Containerization and Orchestration: Docker, Kubernetes

Monitoring and Logging: ELK Stack, Log4j, SLF4J, JProfilers

Testing Frameworks: JUnit, Mockito, Mocha, JEST

Messaging and Communication: Kafka, RabbitMQ

Project Management Tools: JIRA, Confluence

Architecture Patterns: Microservices, Aspect-Oriented Programming (AOP), Inversion of Control (IoC), Dependency Injection (DI)

Agile Methodologies: Scrum, Kanban

Others: OAuth 2.0, Spring Security, CI/CD Pipelines, Dynamic Web Content (Java Servlets, JSP Tag Libraries), Enterprise JavaBeans (EJB)

WORK EXPERIENCE:

GE HealthCare, Chicago, IL | Sr. Java Full Stack Developer | May 2023 - Present

Roles & Responsibilities:

- Spearheaded the design and implementation of scalable web applications in **Java**, achieving a **25% reduction** in development time by adhering to Software Development Life Cycle (SDLC) best practices.
- Developed robust back-end systems with **Spring Core**, **Spring Boot** and **Hibernate**, leading to a **30% improvement** in data management efficiency and business logic execution.
- Utilized **Spring Batch** to create batch processing solutions, successfully handling **over 1 million records** daily, enhancing data processing reliability and efficiency.
- Implemented multi-threading and synchronization techniques, optimizing application performance and increasing resource utilization by **20%**.
- Designed and developed **RESTful APIs** using **Spring Boot**, integrating seamlessly with front-end applications and external services to support **over 500 active users**.
- Managed data storage solutions with **MongoDB**, ensuring **99.9% availability** and optimal performance for NoSQL data needs.
- Developed **GraphQL APIs** that enabled flexible and efficient data retrieval, resulting in a **40% reduction** in data fetching time for front-end applications.
- Architected microservices-based applications, enhancing modularity, scalability and maintainability, which contributed to a **15% decrease** in deployment times.
- Created responsive user interfaces using **HTML5**, **CSS3** and **Bootstrap**, ensuring a seamless user experience across devices, which improved user satisfaction scores by **35%**.
- Employed **React**, **Redux** and **React Router** to build dynamic single-page applications, optimizing state management and reducing load times by **50%**.
- Leveraged **JavaScript ES6+** features to improve code readability and maintainability, leading to a **20% decrease** in bug reports.
- Developed back-end services with **Node.js** and **Express.js**, accelerating API development and integration timelines by **30%**.

- Integrated messaging systems like **Kafka** for real-time data processing, improving inter-service communication and reducing latency by **25%**.
- Automated deployment processes and **CI/CD pipelines** using **Jenkins**, achieving a **40% faster** feature delivery rate.
- Deployed applications on **AWS (S3, EC2, RDS, IAM, Lambda)**, ensuring scalability and high availability, which supported **100% uptime** during peak traffic.
- Utilized **Spring Cloud** to build and manage distributed systems, enhancing resilience and fault tolerance, resulting in a **15% decrease** in system downtime.
- Documented APIs using **Swagger**, improving the developer experience and facilitating communication across teams, which reduced onboarding time for new developers by **30%**.
- Conducted thorough testing and debugging with tools like **Postman, JUnit** and **JEST**, ensuring high-quality deliverables with a **95% pass rate** on test cases.
- Managed source code with **GitHub** and collaborated through **Git workflows**, maintaining version control and reducing merge conflicts by **50%**.
- Configured application servers like **Apache Tomcat** for optimal performance, ensuring secure deployment environments that met all compliance standards.
- Implemented **Spring Security** to secure applications, establishing robust authentication and authorization protocols that reduced security incidents by **70%**.
- Built and configured modern web applications with **Webpack** for module bundling, optimizing asset loading times and improving user experience.
- Leveraged **Docker** and **Kubernetes** for containerization and orchestration, streamlining application deployment and scaling processes, achieving a **30% reduction** in deployment times.
- Utilized **Terraform** for infrastructure as code (IaC), automating cloud resource provisioning and management, which led to a **25% reduction** in infrastructure costs.
- Employed **Agile Scrum** methodologies to improve project management and team collaboration, resulting in a **25% increase** in team productivity.
- Utilized **JProfilers** for performance tuning, optimizing application responsiveness and stability, achieving a **40% improvement** in load times.

Environment: Java, Spring Boot, Spring Core, Hibernate, Spring Batch, MongoDB, React, Node.js, Express.js, Kafka, Jenkins, AWS, Spring Cloud, Swagger, Postman, JUnit, JEST, Agile Scrum, JProfilers, GitHub, Apache Tomcat, Spring Security, Webpack, Docker, Kubernetes, Terraform, TypeScript, Material UI, jQuery, Maven, OAuth 2.0, SonarQube, Eclipse IDE, JIRA.

CareFirst, Baltimore, MD | Java Full Stack Developer | September 2021 - April 2023

Roles & Responsibilities:

- Developed and deployed high-performance web applications using **Core Java** and **Spring Boot**, achieving a 30% improvement in application responsiveness and user satisfaction.
- Utilized **Lambda expressions** to boost code readability and efficiency, cutting processing time by 20% across multiple projects.
- Designed and integrated scalable **RESTful APIs**, facilitating seamless communication between front-end and back-end systems, which contributed to a 25% increase in system interoperability.
- Applied **Inversion of Control (IoC)** and **Dependency Injection (DI)** patterns, streamlining application design and enhancing testability, leading to a 40% reduction in debugging time.
- Utilized **AWS services (EC2, S3, RDS, SQS, SNS, Lambda)** to deploy and manage applications in the cloud, optimizing operational efficiency and reducing infrastructure costs by 15%.
- Implemented **autoscaling** solutions in **AWS**, improving application performance during peak loads and ensuring availability, which reduced downtime incidents by 50%.
- Managed **Spring transactions** and upheld data integrity by applying best practices, resulting in zero data loss incidents during transactions.
- Developed and scheduled batch jobs using **Spring Batch**, automating data processing tasks and increasing workflow efficiency by 35%.
- Enhanced user experiences by incorporating **jQuery** and **AJAX**, achieving a 30% increase in page responsiveness and user engagement.
- Streamlined **CI/CD pipelines** using **Jenkins** enabling faster and more reliable software releases, reducing deployment times by 40%.
- Built and maintained projects with **Maven**, effectively managing dependencies and improving build efficiency by 25%.
- Monitored application performance and logging through the **ELK stack (Elasticsearch, Logstash, Kibana)**, providing actionable insights and reducing troubleshooting time by 20%.
- Designed responsive user interfaces with **HTML5, CSS3** and **TypeScript**, ensuring cross-device compatibility and enhancing user engagement by 30%.
- Developed interactive front-end applications using **Angular** and **Material UI**, increasing accessibility and user satisfaction ratings by 35%.
- Applied **Netflix OSS** tools to construct resilient microservices architectures, enhancing overall system reliability and reducing error rates by 25%.
- Conducted thorough code reviews and upheld high quality standards using **SonarQube** which led to a 15% improvement in code maintainability.
- Collaborated with cross-functional teams using **JIRA** effectively tracking project progress and resolving issues, leading to a 20% increase in team productivity.

- Created and executed unit tests with **JUnit** and **Mocha** ensuring code functionality and reliability, contributing to a 30% reduction in post-release defects.
- Utilized **Yarn** for package management, streamlining dependency management and enhancing application performance by 20%.
- Implemented **OAuth 2.0** for secure user authentication and authorization significantly enhancing application security and improving user trust.

Environment: Core Java, Spring Boot, AWS (EC2, S3, RDS, SQS, SNS, Lambda), Autoscaling, Spring transactions, Spring Batch, jQuery, AJAX, Jenkins, Maven, ELK Stack, HTML5, CSS3, TypeScript, Angular, Material UI, Netflix OSS, SonarQube, JIRA, JUnit, Mocha, Yarn, Git, OAuth 2.0.

American Airlines, New York, NY | Java Developer | July 2019 - August 2021

Roles & Responsibilities:

- Developed and maintained applications using the **Spring Framework**, applying **Aspect-Oriented Programming (AOP)** to enhance modularity and separation of concerns.
- Implemented **Inversion of Control (IoC)** and **Dependency Injection (DI)** to improve code maintainability and testability within complex applications.
- Designed and consumed **RESTful APIs** for seamless integration between various services, ensuring efficient data exchange in JSON format.
- Created dynamic user interfaces using **HTML**, **CSS** and **JavaScript**, incorporating **jQuery** and **Vue.js** for improved interactivity and user experience.
- Managed application deployments on **WebLogic**, ensuring high availability and performance of web applications.
- Utilized **Spring Data JPA** to streamline database interactions implementing repositories for efficient data retrieval and manipulation.
- Developed and optimized databases using **PostgreSQL**, ensuring data integrity and performance through effective query design.
- Implemented **JavaServer Pages (JSTL)** for dynamic content generation in web applications improving the user interface and experience.
- Integrated **RabbitMQ** for reliable messaging between distributed systems, enhancing application scalability and responsiveness.
- Leveraged **AWS services** such as **EC2**, **S3** and **RDS** for cloud-based deployments, ensuring scalability and reliability of applications.
- Built serverless applications with AWS Lambda enabling efficient code execution without server management.
- Applied **Autoscaling** techniques to manage resource allocation dynamically optimizing application performance during peak loads.
- Managed project dependencies and build processes using **Maven** ensuring consistent and reproducible builds across different environments.
- Utilized **GitHub** for version control and collaborative development, maintaining a clear history of code changes and facilitating teamwork.
- Implemented CI/CD pipelines using **Jenkins** streamlining the deployment process and improving code quality.
- Participated in Agile development methodologies, particularly **Kanban** to improve project visibility and team productivity.
- Developed and executed unit tests with JUnit to maintain code quality and reliability during the development lifecycle.
- Teamed up with cross-functional teams to gather requirements and deliver high-quality software solutions tailored to business needs.

Environment: Spring Framework, AOP, Inversion of Control (IoC), Dependency Injection (DI), RESTful APIs, HTML, CSS, JavaScript, jQuery, Vue.js, WebLogic, Spring Data JPA, PostgreSQL, JSTL, RabbitMQ, AWS (EC2, S3, RDS, Lambda), Autoscaling, Maven, GitHub, Jenkins, Agile (Kanban), JUnit.

AT&T, Dallas, TX. | Java Developer | Feb 2018 - June 2019

Roles & Responsibilities:

- Developed enterprise-level applications using **Java EE** and **Servlets**, ensuring high performance and scalability.
- Leveraged the **Spring Framework** to implement **Inversion of Control (IoC)** and **Dependency Injection (DI)**, enhancing application modularity and testability.
- Designed and utilized **Hibernate** for effective database interaction, implementing **Data Access Objects (DAO)** to promote separation of concerns.
- Created robust and RESTful APIs to facilitate seamless communication between frontend and backend systems, utilizing **Spring MVC** for efficient request handling.
- Implemented frontend technologies such as **HTML**, **CSS** and **JavaScript** including **jQuery**, to enhance user interface and experience.
- Engaged with **SQL Server** and **JDBC** for database management ensuring data integrity and optimizing query performance.
- Managed application deployments and configurations on **WebSphere** ensuring adherence to organizational standards and best practices.
- Utilized **BitBucket** for version control and collaboration, promoting effective team communication and workflow.
- Developed and executed unit tests using **Mockito** to ensure code reliability and maintainability throughout the development lifecycle.
- Collaborated with DevOps teams to implement **GitLab CI/CD** pipelines, streamlining the build, test and deployment processes.

- Designed and deployed solutions on **Microsoft Azure**, including **App Service**, **Functions**, **Logic Apps** and **Azure Data Factory**, to enhance cloud capabilities.
- Integrated **Azure Active Directory (Azure AD)** for secure user authentication and access control in cloud applications.
- Managed project dependencies and builds using **Maven**, ensuring consistent and efficient project setup.
- Utilized **SLF4J** for logging, facilitating easier debugging and monitoring of application performance.
- Developed and maintained high-quality documentation using **Confluence**, promoting knowledge sharing and team collaboration.
- Employed **Kanban** methodologies for agile project management, optimizing workflow and enhancing team productivity.

Environment: Java EE, Spring, Hibernate, RESTful APIs, HTML, CSS, JavaScript, SQL Server, WebSphere, BitBucket, Mockito, GitLab CI/CD, Microsoft Azure, Maven, SLF4J, Confluence, Kanban.

TechnoGen India Pvt. Ltd. Hyderabad, India | Software Engineer | June 2013 - Dec 2015

Roles & Responsibilities:

- Developed web applications utilizing the **Struts** framework and the **MVC** design pattern.
- Implemented **Java Message Service (JMS)** to ensure reliable messaging between distributed systems.
- Utilized **Eclipse IDE** for efficient coding, debugging and development tasks.
- Created data access layers with **Hibernate** Data Access Objects (DAO) for **Oracle** database integration.
- Implemented dynamic web content through **Java Servlets and JSP tag libraries**.
- Designed and built scalable applications using Enterprise JavaBeans (EJB) to optimize performance.
- Employed **JDBC** for effective database connectivity and operations.
- Managed version control using **Git** to promote collaborative development and code integrity.
- Conducted unit testing with **Mockito** to validate code functionality and maintain high-quality standards.
- Implemented **Log4j** for effective logging and performance monitoring of applications.
- Collaborated with teams using **JIRA** for efficient project management and issue tracking.
- Developed **SQL and PL/SQL** queries to boost data performance and efficiency.
- Integrated **SOAP** web services with **WSDL** for smooth system communication.

Environment: Java, EJB, Hibernate, Oracle Database, JDBC, Java Servlets, SOAP Web Services, Log4j, PL/SQL, SQL, Eclipse IDE, MVC, JMS, JSP Tag Libraries, Mockito, Git, JIRA.
